4495. Then the holders of those commodities must be capitalists, and must not be dependent upon accommodation, or else they would be obliged to sell?—See how it works practically. Take a case: a Frenchman sends over about 3,000 *l.* worth of goods to his broker in Mincing-lane, to sell them at a certain price; he finds that he cannot sell them at that price, and he writes over to that effect; the Frenchman says, "Well, if I sell under that price I shall lose a great deal of money, and you must assist me." Then the broker assists him with 1,000 *l.* He says, "Draw upon me at three months for 1,000 *l.*," which is one-third of the value; "I will keep the goods in my possession as security, and in three months we shall sell them." Then the broker tells me that the three months have expired, and he is no nearer selling them than he was before. He has then to pay this 1,000 *l.* bill, and though he has the 3,000 *l.* security he cannot make it available; then he is in difficulties, and that is how one pulls down another.

4496. How does this account tally with the large returns which we see of the exports and imports?—With regard to the large exports, I apprehend that where there is a depressed state of trade at home, it necessarily forces large exportation, and I do not know that that is any criterion of increased employment, unless you can at the same time say what has been the case with regard to the home consumption.

4497. Do you think that the home consumption has been diminished?—Very much indeed; I should think it must have been immensely diminished, from what we hear; the shopkeepers are the best authorities.

4498. Still the importations are very large; does not that indicate a large consumption?—It does, if you can sell; but many of the warehouses are full of these things; in this very instance which I have been relating, there is 3,000 *l.* worth imported which cannot be sold. These are little incidents which occur, but what occurs to one we may assume will occur to others; if it comes before us in the way of business, we may assume that similar things come before others.

4499. You consider, then, that the Act of 1844 has not operated very well for trade?—Not well for the public, I should say.

4500. It has operated well for the banker?—Very well indeed, and for the capitalist.

4501. During that period, it has not exempted the public from a great panic, has it?—No. Capitalists are now getting what you may consider a legitimate rate of interest, and beyond that an additional rate for an artificial scarcity of money.

4502. What, in your estimation, was the cause of the panic in 1847?—The same cause as that assigned for former panics.

4503. A drain of bullion?—A drain of bullion.

4504. The currency being based upon bullion?—Yes; I think that we find, in all these various panics, that there has never been the slightest suspicion as to the soundness of the Bank of England note.

4505. Taking the last three or four years, according to the Governor of the Bank, who has been examined, he considers that during those years, although they have been years of difficulty, the Act of 1844 has operated well; is that your opinion?—As far as I am able to judge of the Bank of England, I should expect that it would operate very satisfactorily to them; it must save them a good deal of trouble and responsibility. I should think that they could have no cause to complain of the Act, because whatever distress it may produce, whether it does or does not, does not rest with them; they are merely the persons who carry out the Act.

4506. What do you consider to constitute the difference between the Act of 1819 and the Act of 1844?—If we take the Act of 1844, it is what the Act itself states it to be, namely, that it is to limit the issue of country banks; that is one of its provisions, and the other is, to appoint a way in which the Bank of England shall conduct the issue of their notes; there is nothing in the Act beyond that; those are the two chief points, I think, of the Act.

J. Twells, Esq.

17 July 1857.

4507. So that the Act of 1844 is more binding upon the Bank to carry out to the fullest extent the Act of 1819?—Very much, I think; and if we look to what was stated at the time, it was said that it was, as far as legislation could do it, to prevent a recurrence of the evils of 1825, 1836 and 1839, and to give a steadiness to the trade of the country. It certainly has signally failed in those objects, I should consider, because it has not produced that steadiness or prevented a recurrence of those evils.

4508. The system pursued under the Act of 1819, between 1819 and 1844, may be considered as riding the Act with a loose rein, and the system under the Act of 1844 as riding it with a tight rein?—Yes, I think that is about the correct view of it.

4509. You stated that the intention of the Act of 1844 was to prevent those fluctuations and pressures in trade which had existed previously?—Yes.

4510. Do you think that that has been the effect?—No. I still keep experience in view. I do not know how to divide the fluctuations between the several periods, but I know they have been very numerous.

4511. Is it not true that between 1844 and the present time, there have been about 50 fluctuations in the rate of discount?—I was not aware that there had been so many as that; I knew that they had been very numerous; I thought that there had been between 40 and 50 from the year 1819 up to the present time.

4512. There has been an opinion expressed before this Committee that this frequency of alteration in the rate of discount is natural, and impossible to be prevented; is that your opinion?—Keeping experience in view, I should say that regularity is certainly not impossible, because we had it for so many years.

4513. It is stated that these alterations in the rate depend upon alterations in the value of capital, and not in the value of money; is that your opinion?—The money, I apprehend, will fluctuate very much indeed under the present system, and it has an influence on the value of capital.

4514. When money is dear would you say that capital would be cheap?—Yes.

4515. When it is stated that it is an alteration in the value of capital, which produces these oscillations, would you suppose that it meant deposits?—I should not consider deposits as forming a part of capital.

4516. As a banker do you deal in capital or in money?—We deal in money.

4517. How are the deposits paid into your bank?—In money.

4518. How are they paid out?—In money.

4519. Then can they be called anything else but money?—No.

4520. Do not they, in point of fact, form part of the circulation?—Yes.

4521. Anything which affects the value of gold affects the value of deposits?—Yes.

4522. They are of the same nature as the bank note, are they not?—Yes, I think so.

4523. Which varies in value with the presence or the absence of bullion?—Yes; those very subtile questions are things which I have not paid much attention to, because my inquiries have been all of a practical character; I can speak better to any practical point.

4524. But practically speaking you know that deposits are virtually money?—Yes. I did not, at first, catch the meaning of the question (4515).

4525. And that they alter in value?—They constantly alter in value.

4526. They alter in value with the alteration in the value of gold, or in the value of the bank note?—Yes.

4527. When the rate of discount rises, the joint stock banks give more to their depositors in proportion?—Yes.

4528. If the alterations in the rate of discount are stated to depend upon the alterations in the value of capital, if that capital be deposits, that capital, in fact, is only money?—To look at it practically, if I begin business with 10,000 *l.*, I buy with 5,000 *l.* tallow, or coffee, or cocoa, or anything, and put it into a warehouse; I deposit the other 5,000 *l.* with a banker, to draw upon it and use it as I require it; I consider it still 10,000 *l.* capital to me, though 5,000 *l.* is in the shape of deposits or money.

4529. You have parted with 5,000 *l.* of your money to somebody else?—Yes, but still it is at my command.

4530. You have exchanged 5,000 *l.* of your 10,000 *l.* for goods?—Yes.

4531. You

4531. You have parted with your 5,000*l.* of notes to somebody else?—Yes.

4532. Then he has 5,000 *l.* of deposits?—Yes.

4533. And you have 5,000*l.* of deposits left?—Exactly.

4534. He has 5,000*l.* in money, and you have 5,000*l.* in money?—Yes.

4535. But it is nothing but money at last?—No.

4536. Under what does the country suffer, and why under a drain of bullion?—Because it cannot have supplied to it a sufficient circulation. The House of Commons was congratulated, in the year 1811, upon the adoption of a measure for supplying the country with a "circulating medium of undoubted credit proportioned to its wants;" now I take it that to secure that is the object of a sound currency.

4537. Mr. *Glyn.*] From what is that an extract?—That was stated on Mr. Horner's motion for the Bullion Committee. "A circulating medium, of undoubted credit, proportioned to the wants of the country," I conceive, must embrace everything that can be required of a currency.

4538. Mr. *Cayley.*] Whose opinion is that?—That is what was stated by Lord Castlereagh, and he observed upon it that this circulating medium of undoubted credit had, "for the first time, solved the problem of reconciling national prosperity with a state of war; that the country had risen in manufactures, internal improvement, revenue and commerce, with a velocity which had never been experienced in a year of profound peace."

4539. Would you like the system which existed at that time to return again with the restoration of payments, like that of 1819?—I am not aware what objection can be made to it; if you look back, the Restriction Bill, and the provision as to the issue of notes by country bankers, you will see that this system did not arise from superior sagacity in anyone; it was one of those things which are discovered by chance and the force of circumstances; therefore the progress of the issue of these notes was very slow, without the opposition and without the support of the Government. Country bankers were called into existence by the wants of the people, not from any encouragement of the Government; and I should consider that they were and are among the most useful men in the kingdom.

4540. Then where would be your measure of value; would you have no limit to your circulation?—You must have a limit by the wants of the people; you cannot issue beyond their requirements, if you take experience for your guide.

4541. Supposing your wishes could prevail, would you be satisfied with any limit, such as 14,000,000*l.* or 16,000,000*l.* of either Exchequer notes or Bank of England notes?—Now we issue about 14,000,000*l.* against securities; I should consider that it would be only the honest and the just course to take, that those notes should bear upon them the mark of the basis upon which they are issued; there can be nothing to object to in that; I think that they should be known to be issued upon securities, and that instead of being promises to pay, they should be promises to receive in aid of all the taxes. Now, I should be very careful in hazarding an opinion upon a thing which has not been tried; there is that subtlety in all money transactions that you cannot pronounce respecting them with confidence, nor do I think anybody's mere opinion can be entirely relied on; but I should be inclined to think that if 14,000,000*l.* were issued in that manner, not payable in gold, it would go a great way indeed to restore a steadiness in our commercial transactions; I could not say that would be the case, but I have that strong impression.

4542. That 14,000,000*l.* would be a legal tender from the Bank of England?—Yes.

4543. There would then be only some 4,000,000*l.* or 5,000,000*l.*, or 6,000,000*l.*, probably issued upon gold?—Yes, for which you could apply to the Bank for gold.

4544. There would then be bullion notes and legal tender notes?—Yes; as an opinion I should say that, if there were no objection, it would be very beneficial to increase the amount of the legal tender notes to 20,000,000*l.*; but still if there is any hesitation about it, my impression is, that the 14,000,000*l.* would effect great good.

4545. You say that you are not willing to make a positive statement, but that you go by experience?—Yes.

4546. The experience of this country for the last 10 or 15 years is, that somewhere about 20,000,000*l.* of bank notes are required in the hands of the

J. Wells, Esq.

17 July 1857.

public for the commercial purposes of the country?—Yes; seeing that is the reason why I mentioned 20,000,000 *l.*; 20,000,000 *l.*, I think, would make it perfectly secure.

4547. Do you think that, if there were 20,000,000 *l.* of Exchequer notes or of Bank of England notes which were a legal tender, and if the Bank of England had the power of issuing, say 4,000,000 *l.* or 5,000,000 *l.* convertible into gold, and if all the other bankers of the country had to convert their notes into this given amount of legal tender, it would prevent the oscillations in the rate of discount?—I should be strongly disposed to that opinion; but still till the matter had been tried, I would not be too confident about it.

4548. The rates of discount, in your opinion, have varied from the oscillations in the amount of gold?—Yes.

4549. But there would be no oscillations then in the amount of the legal tender?—I think not.

4550. And therefore the rates of discount would be less variable?—They would be steady and uniform.

4551. As they used to be before?—As they used to be before. I am quite aware how useful an instrument paper is, but it is quite desirable now, when there is time to consider of it, to ascertain what is the best mode to make it secure by any regulations which may be thought proper, and by any plan which may be adopted; I do not suppose that what I propose is perfect.

4552. Do you mean security for convertibility, or security against loss?—Security against loss. It is quite proper to consider any such plan.

4553. These notes would be a legal tender convertible into taxes?—Quite so.

4554. Would there be no other legal tender?—No.

4555. Then there being no other legal tender, the amount could not oscillate?—I should think not; it would be my impression that it could not; and it would be a safe trial, because if such a note were formed through the machinery of the Bank of England, which is so very excellent, and if such a note were to be issued to-morrow morning, I have no idea there would be the slightest objection raised to it.

4556. You think that it is of great importance that, if possible, variations in the rate of discount should be prevented?—Very much so.

4557. Do you see any probability of that being the case, so long as the amount of the legal tender varies with the amount of gold?—I do not see how it is possible, and particularly as we have experience to guide us, which is so valuable; it is the best test of truth.

4558. How would you manage with your foreign payments?—We have nothing to do with them; that is the merchant's business. I take it that what we want is a domestic currency quite independent of any foreign state. Whether gold or silver is wanted for the Continent, or for India, or anywhere else, it ought not to touch our domestic currency; we ought not to suffer from the mismanagement or from the wants, real or artificial, of any other country.

4559. Do we now settle our foreign payments with our currency?—I suppose the merchants do it with their bullion occasionally. I cannot help keeping experience in view; I know that for 20 years we did it without any metallic currency, and I do not apprehend that there can be any difficulty in doing it now if we did it then.

4560. The rate of exchange with another country is merely the value of our own currency in their currency?—The rate of exchange is merely between foreign merchants a means of settling their accounts. This rate ought to be quite irrespective of our currency, and it should have nothing to do with it whatever.

4561. Our foreign payments are, in point of fact, carried on by barter?—Yes.

4562. And you would have every separate merchant settle his own transactions?—Quite so.

4563. At present it is done through the instrumentality of the Bank of England?—It is a great deal through the instrumentality of gold, I suppose; but still there is no necessity for it. It is a very arbitrary measure to fix the price of gold or copper, or anything else, because we know very well that if a foreigner comes and finds that copper is cheaper than any other commodity, he will have all his return made in copper; if he finds gold cheaper, he will require to have his return made in gold.

4564. If the gold varied in value, he would be less likely to demand it if it was

was high?—It would then depend upon his wants and disposition as to what price he would give for it, exactly as if he was buying iron, or copper, or any other thing.

4565. Do we now settle foreign transactions in silver in that way?—An amazing amount of silver is exported from one cause or another; it is an article of barter which rests with the merchant entirely. I say any system would be defective if it should at all affect our currency.

4566. If there was this paper which you recommend, would there not be a danger that Parliament might alter the quantity of those notes which you think might constitute a better legal tender than we have now?—I should apprehend that a Government is the only power which can issue in excess; and any Government can do that, as we saw in France; the amount is regulated by the requirements of the country; they draw it out. It is trade which draws money into existence, I consider, and then money stimulates trade. We are so familiar with the machinery of the Bank of England, that I hardly know how to apply it to anything else; but the Bank of England, I should say, cannot issue to excess. We have seen very recently that they have had such an abundance of money that they have gone to the public, and have really invited them, saying, Come and take our money from us, and we will only charge you two per cent., but they could not get rid of it. There is no possibility of the Bank of England issuing in excess, so long as you give them credit for that common sense and common honesty which will protect their own interests.

4567. What difference is there between the paper which you recommend, and the French system which you appear to condemn?—The difference is, that when the French issued paper, they did not take their own paper in return. Now, you must take care not to issue more than you can receive back in return. Then it is a perpetual circle. You get your own money back for taxes.

4568. The legal tender has a value, in consequence of the imperative demand of commerce for it?—Completely, and the sanction of Government that will always give it a value; and all Government paper, I conceive, ought always to be in high value; it ought to stand in high estimation in the country.

4569. Suppose that 20,000,000 *l.* of notes was the amount found to be indispensable for commercial transactions, and that there was 20,000,000 *l.* of legal tender constituted by Act of Parliament, would those 20,000,000 *l.* of notes be as valuable as 20,000,000 *l.* of sovereigns?—Quite.

4570. You think that their purchasing power would be as great?—Quite so; I never knew a Bank of England note which was not convertible into everything which was required; there is no one thing but what it is at all times convertible into.

4571. If the amount of the proposed notes did not exceed what we have by practice found to be the amount demanded by commerce, namely 20,000,000 *l.*, you do not believe that they would depreciate in value?—I conceive it impossible for them to do so.

4572. Would the note alter in value?—I conceive not; if you speak of it as paper, it would alter no more than the sovereign would alter. I take a sovereign to-day, and buy five pounds of tea with it; next month I may go, and I shall only get four pounds for it, but then the sovereign will not have depreciated in value. It will have depreciated, it is true, if you compare it against tea.

4573. The supply and demand of commodities remaining the same, do you believe that the 20,000,000 *l.* of legal tender of paper would remain of a uniform value?—Quite so.

4574. But gold does not remain of a uniform value?—By no means.

4575. We have had 40 or 50 changes in the value of gold in the last 30 years, have we not?—Yes; nothing will remain uniform; because there are demand and supply, and local circumstances, which vary the price of everything. You cannot fix it; you do not want to fix it.

4576. Those alterations in the value of the gold pound have taken place in consequence of the export of gold?—Yes.

4577. But there would be no export of the paper legal tender?—None whatever.

4578. Therefore it would be less liable to fluctuate in value?—It scarcely could fluctuate in value, unless you took it, and compared it against one specific commodity.

J. Twells, Esq.

17 July 1857.

4579. It has been stated, that in the pressure of 1847, or in 1825, it was capital which the merchants were so anxious for, and not money; is that your view?—No; what they wanted was money to bring their capital into activity. Many instances are found where persons have had undoubted capital, even silver, upon which they could not get advances; they could not get instruments to carry on their trade; they wanted something to effect barter between man and man. If you contract the instrument of exchange, whatever it is, you contract the power of dealing with men.

4580. And you raise its price?—And you raise its price.

4581. And if the scarcity becomes very great, it produces a panic?—Quite so.

4582. As much as would be produced on board a ship, if the last barrel of water were to have a leak in it?—We find that there never is a demand for gold in commercial distress; it is Bank notes that we want, not gold.

4583. You speak of domestic transactions?—Yes.

4584. But foreign transactions are settled by barter, not by money?—Quite so; they are quite a separate subject, I should consider, from that of currency.

4585. If a limited quantity of 20,000,000 *l.* of notes of the description proposed were to be issued by Government, do you suppose that the Bank of England would receive 11,000,000 *l.* of that amount in payment of their debt?—That I do not know; that would be an arrangement between the Government and the Bank, which, no doubt, would be readily effected; whether the notes are issued by the Government, or issued by the Bank of England under the Government sanction, is a matter which is very immaterial. I only speak of the Bank of England, from seeing the excellence of its machinery in carrying on its operations.

4586. That system would be cheaper to the country than the present system?—Yes; it is quite a matter of arrangement; so long as the principle is adopted, it does not matter by whom the notes are issued.

4587. It has been stated to the Committee that prices have not been much affected by the different drains of bullion, and by the different alterations in the rate of interest in the country within the last few years; is that your opinion?—I should expect that there has not been that great depreciation which we should think would arise from the scarcity of money; some things have maintained their price very well, but a few dealers whom I see say, that although the price is not lowered, they do nothing, they have no business.

4588. Do you suppose that there are counteracting causes in operation at all?—There will be always a counteracting cause. If you deprive parties of the power of purchasing, of course they cannot purchase as they would do if they had more abundance; as has been said, a change in the rate of money affects every contract and every man in the Kingdom; therefore, though we cannot trace it and follow it, we all feel the evil effects of it.

4589. It has extended even to land?—To everything.

4590. An estate will not sell so well under a high rate of discount as under a low one?—No; it must affect everything.

4591. Do you believe that the gold-findings in Australia and California have had much effect upon the world or upon England in particular?—As far as England is concerned, they must have contributed very much to prevent distress; if the gold had not arrived, we must have felt the pressure, and what measures would have been necessary to be adopted it would be perhaps idle to look at; but there must have been some measures; either the Bank of England must have broken through the Act of 1844, or some steps must have been taken if that gold had not arrived; it sometimes happens now that really the welfare of the commercial world seems to depend upon the arrival or the non-arrival of a ship with gold.

4592. You think that it is not very creditable for the destinies of a great country to depend upon so small a circumstance as that?—I think it is anything but creditable, still you see that that is the consequence.

4593. You do not believe it to be necessary that the destinies of the country should hang upon the arrival of a ship?—I think not indeed; I think it is a pity that they should; it is a thing which ruins so many, there is so much pressure and so much evil, we see how it operates in all cases and upon every person. If you make money plentiful, you see that everybody is employed directly. As you withdraw it, people are thrown out of employment, and then we have recourse to that benevolent though cruel measure of causing people to emigrate.

4594. Under

4594. Under the present system that is inevitable?—Quite so, at least if we are told, as we have been, that our population increases so much that we cannot maintain them; but then we find that we always do maintain them when they have tools to work with, when they have plenty of money.

4595. If a tightness in the money market lasts for a considerable time, the tendency is to force sales in spite of prices being temporarily low?—Yes, it is merely a question of time; in time, parties must sell their commodities at any sacrifice. Of course that is warded off as long as possible.

4596. The object of putting on the screw is, if the gold does not return before, to produce in this country such a fall of prices as will induce the foreigner to come here to purchase our goods instead of taking our gold. Is not that so?—Yes, it has occurred very frequently in these fluctuations which have taken place, that when there has been a great issue of notes, it has caused a great deal of activity. People are led into various pursuits, some sound and some unsound; then we have recourse to the measure of altering the rate of discount in order to bring back the gold, and then all these parties feel the loss of it, they are punished for their activity. We have had that over and over again.

4597. It produces constant cycles of adversity and prosperity?—Yes, it seems inevitable.

4598. If the system were changed, you think that things would not be liable to those fluctuations?—I think not. The thing is to look at what would change it. There is one measure which I suppose would have a great effect, but I really do not know to what extent, and that is this: The Bank of England are now bound to purchase all the gold that is brought into the country. Now we have seen a time when they have had a sufficient quantity of gold to pay all their notes irrespectively of the 14,000,000 *l.* I do not see the advantage of compelling the Bank of England to be a sort of warehouseman for the dealers in gold, if the Bank do not want it. If you give them a discretion not to purchase more than they saw was necessary for their wants, and the wants of the public, that would make a great alteration.

4599. What would be the effect of any such alteration?—At that period it would have thrown, perhaps, 6,000,000 *l.* or 8,000,000 *l.* or 10,000,000 *l.* of gold into the market for the merchants to have done what they pleased with; they would have dealt with it the same as with so much copper.

4600. Do you believe that the commercial public would have any difficulty in liquidating their foreign transactions if the Bank of England was not a warehouseman, as you call it?—Not the least. There is also another evil attending it. By taking this gold it throws such a quantity of notes into circulation as encourages and fosters speculation, which is often of a dangerous character; but which the Bank of England cannot prevent.

4601. Then you object to an excess of notes being thrown into circulation?—In that injudicious way, because they do not come on account of the requirements of trade; they are forced on by this arbitrary principle. Now that I consider very pernicious. I think it would have a very beneficial effect if the Bank were precluded from buying more gold, if ever such a period should arrive again, than they required for their own wants, and the wants of the public, as far as they are able to judge.

4602. When would you stop them?—That must depend with them; they are the best judges of that. You cannot fix any limit; it is a discretion which you must leave with them, I think.

4603. You say that during the Bank Restriction Act a merchant had no idea of any difficulty with regard to any alteration in the measure of value?—No.

4604. But that since that period there have been perpetual changes in the measure of value?—Yes.

4605. Do you think that it has had any effect upon the mercantile body, that they are perpetually obliged to consider whether the measure of value will be greater or smaller in addition to the anxiety which they must have with respect to the supply and demand of the commodities in which they deal?—A great many look at it very vigilantly; but there are great numbers who do not trouble themselves about it; they pay very little attention to it. We cannot but see the effect, I think, comparing it with former times, which these fluctuations have produced. I will not say, exactly, that they have been productive of gambling in commerce; but of great irregularity and wild speculation, very far from that

J. Twells, Esq.

17 July 1857.

sober description of trade which used to characterise the English merchant; they have produced a great deal of what I may call an unsteady course.

4606. Do you attribute that in part to these violent fluctuations in the value of money?—They must necessarily have that effect; I think we must see that they have; persons now look to profits very much indeed, not so much to that steady course of industry which meets its reward, but to buying and selling, and making profits from the fluctuations which arise; there is a great deal indeed of that kind of thing; we see now by those who have capital, and can avail themselves of it, to what an extraordinary extent various trades are carried. There is a sort of monopoly; there are large houses like palaces with almost little towns which persons will occupy; they will deal in everything possible, from a hat almost to a ship; a vast accumulation of trades now unite in one hand. Now that is all very prejudicial to a little trader.

4607. What do you think that that is in consequence of?—Quite in consequence of these irregularities; there is such a rapid increase, that it gives a great command to those who have capital.

4608. Do you think that the result of the present system is to make the rich man richer, and the poor man poorer?—I think it must do so. We are now getting a high rate of interest. Whom do we get it from? I consider that we get it from the industrious commercial man, the trader; he pays us this high rate of interest; we profit by it, but it must be at his cost.

4609. Then you think that a limited amount of paper would preserve the measure of value more uniform, and that these oscillations and pressures are not necessary to commerce?—I think them pernicious to commerce.

4610. In fact, if the interests of commerce were considered rather than those of money, do you think that it would be expedient to get rid of a system under which commerce is kept in a constant state of apprehension, and subjected to occasional paralysis?—It would be desirable to get rid of it, or to modify it, so as to take the mischievous part away from it; whether it is capable of that I am sure I do not know.

4611. Supposing people were disposed to distrust your 20,000,000*l.* of paper, do you believe that if they demanded 20,000,000*l.* of gold to be locked up in a cellar as security for the paper, it would be a better money for commerce than the present, that legal tender being still inconvertible?—That is supposing a thing which we can hardly imagine, but I do not conceive that the note would be at all more valuable in practice and in reality. The Bank note with the sanction of the Government would be just as much valued as though the people knew that there was a sovereign locked up to meet it; the sovereign locked up to meet it would not give it one tittle more power.

4612. Do you think that commercial men if they had been consulted, would have invented such a system as this?—Certainly not.

4613. You think that it is a system which must have been invented by money dealers, rather than by commercial men?—Yes; it is the system of most commercial men to require very great freedom in all their transactions, as being the most profitable course which they can take.

4614. The natural tendency in a country like this of great industrial energy, and an old country, would be for capital to accumulate, and the rate of interest gradually to decline, would it not?—Yes; we see in experience that it does accumulate. Look at the possessions of this country now, compared with what they were 50 years ago; how wonderfully they have increased!

4615. But the present system is constituted so as to make money periodically scarce and dear?—Quite so.

4616. Do you think that the commercial public are discontented with the present system?—There is a great variety of opinions. Many, of course, are very much discontented, and many prudent, cautious respectable persons have withdrawn very much indeed; they do not absolutely give up their transactions, but just keep sufficient for it to be known that they are in existence. Others are going to a very great extent, carrying on a prodigious trade in exports and imports, to an extent far beyond what their capital justifies them in doing; there can be no doubt at all of that. These men may succeed; they may by some lucky venture get large fortunes, and put themselves right. That is very much the system in which a great deal of trade is now carried on. Persons will consent to lose 20, 30, and 40 per cent. upon a shipment; the next venture may bring it back to them. If they fail in one after another, then they are broken up;

up; and that is just the case which we have often seen recently; mercantile houses have broken up, without one shilling of property being left.

4617. Do you think that trade is not so steady as when you first remember it?—Certainly not. With regard to the rate of discount, when it was 5 per cent., you never had any doubt; no questions were asked; everybody knew the rate, and there was an end of it. You now make a bargain for almost every transaction, excepting that we, and bankers I believe generally, are guided by the Bank rate, and do not trouble ourselves about anything else; what the Bank charges we charge.

4618. If the plan which you suggest were in operation, country bank notes would be convertible into those notes?—Yes.

4619. Do you think that the country bank circulation is now in a satisfactory state?—I should think that it was quite satisfactory. I think there are between 200 and 300 country banks; their average circulation does not amount to 30,000*l.* each; that is a very small thing; I should have thought it hardly worth attending to. We allow these country bankers to deal in bills of exchange, which are said to amount, I think, to 120,000,000*l.* or 130,000,000*l.* A great many of these fall into the hands of country bankers; we allow them to use their own discretion and their own judgment, and we know that in general they are men who want to increase their income. They are not adventurers; though they are not wealthy men, many of them, yet they are all highly respectable, well-conducted men of business.

4620. Do you think it right that security for their issues should be given?—I should be puzzled to know why you should take security for their issues, unless you take security for the deposits as well; their issues form a very small amount indeed, compared with their deposits.

4621. If securities were demanded, they might be demanded, if the law permitted it, from the newly-established banks, and not from other banks?—Yes, if they chose to do it. It would appear to me, looking at it as a man of business, that it is rather imposing a restriction upon them, because if you take securities, you also compel them to find another security to meet their payments. If a man now issues notes, say at York, he must make them payable in York, and he must make them payable in London; then he must keep a stock in each place, to meet any demand to be made upon him, and, in addition to that, he would have to find security for his notes. I do not know how a country banker would receive the proposition, I am sure.

4622. He would give a double security for his notes?—Yes.

4623. And none for his deposits?—None for his deposits. I have asked several country bankers what they thought themselves of the proposition. It is very various; it depends upon their circumstances, and their position, and upon the locality. Very recently I asked a man about it; he said, "I will give security, if they like it. I do not care about it." In looking at the position of this gentleman, his circulation is about 5,000*l.*; he is a man who holds a very large amount of stock; he would transfer 5,000*l.* in a moment; it would be no inconvenience to him. He said, "I would rather not issue any notes, and I should not do it, only sometimes we are unexpectedly called upon, and it is convenient having our own notes by us, otherwise I try to issue as few as I can." To a man of that sort it is no object; he is in an agricultural district. I think that in Boston, where the circulation is 60,000*l.* or 70,000*l.*, a man would be very differently placed if you asked him his opinion. It depends very much upon the quantity, and a variety of incidents. A man who issues 60,000*l.* has to provide, of course, a large amount of money to meet those notes, whenever he is called upon; he would not say so readily, "I will give security in a moment, if I am asked." He would be satisfied to withdraw his issue; it would not much matter to the country bankers; it is a matter for the public more than for them. I should doubt whether they would trouble themselves much about it; because, if they did not like it, they would cease their issues, which would not be of very much consequence to them.

4624. Upon the whole, do you think that experience proves that about 20,000,000*l.* of active circulation is adequate to the country's wants?—I think so, from the returns which we have had in recent years.

4625. And you think that 20,000,000*l.*, receivable in taxes, and made a legal tender, would be perfectly secure from being discredited?—I think so; as I

J. Twells, Esq.

17 July 1857.

said before, I will not give a confident opinion upon anything which has not been tried, but it is quite my impression. I even think that 14,000,000 *l.* would do.

4626. You would suggest that those Exchequer notes, or those Bank notes, which were the legal tender, should be limited in quantity?—Yes.

4627. But the trade of the country would expand, and would require more circulation?—Yes.

4628. Do you believe that that would be sufficiently furnished by the country and other circulation being converted into those notes?—If they were permitted to do it.

4629. Would a foreign commerce be conducted with ease and security under such a system?—I should not think that foreign commerce would be in the least affected by it. I cannot conceive it.

4630. Gold and silver being always attainable in exchange for goods to settle balances with other nations?—Yes; they will always be exchanged; those who want silver and gold will always get it for Bank notes; you never find that a person refuses to give up his bullion for a Bank note.

4631. *Chairman.*] You recommend the issue of 20,000,000 *l.* of Bank notes not payable in gold on demand, but receivable by the Government in payment of taxes?—Yes.

4632. Do you understand that those notes would be issued by the Bank of England or by the Government?—I think it is perfectly immaterial. I should say by the Bank of England, on account of the completeness of its machinery. In order to avoid as much as possible violating the feelings of the people, with regard to that to which we have been so long accustomed, it would be merely altering the words, and inserting instead of "I promise to pay," something of the same kind as is inserted in an Exchequer Bill, "payable for receipt of taxes." It would of course be sanctioned by Government, but whether the notes were issued by the Government or by the Bank of England, I think would be very immaterial.

4633. Of course it would be necessary to omit the words, "I promise to pay," because those notes would not in fact be promises to pay on demand?—Quite so.

4634. What do you conceive to be the advantage of an inconvertible note of that kind over a convertible note payable to bearer on demand?—It would prevent a drain of bullion when it is required for foreign trade, and it would give us what is so very essential, a domestic currency which is not influenced by any foreign transactions whatever. If France or America wants a quantity of gold, it ought not to interfere with our domestic currency. Our merchants and all our trade surely should not suffer because America wants gold.

4635. Do you think that that currency would run the risk of ever being depreciated in value, that is to say, that inconvertible 5 *l.* notes would not exchange for five sovereigns?—I do not know as compared with sovereigns; that, I think, is of no consequence in the world. We want it for our internal commerce, and we want it to pay Government their taxes.

4636. How would you determine the value of a 5 *l.* note?—I do not want any value beyond its passing for 5 *l.* for taxes; whatever the Government demands from me as a tax of 5 *l.*

4637. Supposing this was the state of things, that a person would only give, say 1 *l.* for a 5 *l.* note, would it be, in your opinion, any disadvantage or inconvenience?—I cannot conceive the possibility of such a state of things as that.

4638. Are you aware of the state of things which existed in France at the time of the issue of the assignats?—Yes.

4639. Are you aware that the assignats were depreciated some 400 or 500 per cent.?—Yes.

4640. What do you conceive to have been the cause of that depreciation?—What I stated a little while ago, that a Government may issue in excess; it is very possible, and supposing it is a corrupt Government, they have the power of doing it; but such an institution as our Bank of England cannot do it, because they only issue against property, against something of equal value with their own notes, and we consider that the further value of their own notes is secured by the sanction of a well-established Government; that the guarantee of our Government, taking it as it is in England, is quite equal to 20,000,000 *l.* of gold deposited in a vault. I should be very sorry to think otherwise of it.

4641. I thought you said that you could conceive that it might happen that, under the system which you recommend, the 5 *l.* note would not exchange for five

five sovereigns?—That, I think, is not material. A Bank note, I conceive, is convertible into everything. If you wanted to convert it into gold you would go to a bullion merchant, and he would give you the market value in gold as he would in any other commodity; it might be more or it might be less than five sovereigns.

4642. What do you conceive to be the advantage of making those inconvertible notes receivable in payment of taxes?—The advantage is, that it keeps them at a steady price. I go by experience, and I am looking at the 20 years when we had no gold.

4643. If you make these notes receivable in payment of taxes, is not that a violation of the principle of inconvertibility?—No, I conceive not.

4644. You compel the Government to take one of these 5*l.* notes for a sum of five sovereigns, do you not?—For five pounds. If they tax me, they do not say, We require you to pay five sovereigns, but five pounds; it is a term of account, and I give them five pounds.

4645. Then you think that a pound is something independent of the value of the gold which it represents?—Quite; we had the term "pound" in account, when we had nothing to represent it; it is only recently that we have had the sovereign which represents the pound.

4646. Do you think that a pound then meant a piece of paper with certain words printed upon it?—It had a superscription, which gave it a value in the country, payable for all taxes.

4647. Then your view of a pound is, that it is something quite independent of any value in metal?—In gold; as completely now as it was in the early part of my experience.

4648. And you think it desirable that a currency should be established upon that principle?—I would have it established upon that principle; but as I have stated, if there can be any amendment suggested it will be very desirable.

4649. Mr. *Hildyard.*] You described the Act of 1844 to be the harvest of the bankers, did you not?—Yes.

4650. We will assume a London bank of the first credit and capital; will you describe practically how a London bank of the first capital and credit would make its profit out of a crisis like that of 1847?—I do not go into the crisis of 1847, but I go up to the present period; it makes the difference of charging 6 or 7 per cent. instead of charging 3 or 4.

4651. Might not such a bank also make a profit out of a crisis by buying property which was depreciated by the crisis?—It might.

4652. Was not there a very sudden fall in funds upon that occasion?—Yes.

4653. A banker upon that occasion would make a good profit by buying the funds so depreciated?—Yes, he might; but it is not much the practice of the bankers to do that, I apprehend; they may do it occasionally, no doubt, and if they have a surplus capital, it seems a fair thing to do; but I am looking at the regular common traffic of a banker. There is no mystery about its increasing his profits now compared with what they were two or three years ago.

4654. Because you think that it has had a tendency to cause a higher rate of discount?—We know that it has.

4655. Mr. *Cayley.*] You have been asked how you determine the value of a 5*l.* note; how do you determine the value of a sovereign?—I determine it by what it will produce to me, and I always find that a Bank note will produce quite as much as a sovereign. Some subtile questions may arise upon it; but I never found any difficulty in practice in converting a 5*l.* note into anything that I wanted.

4656. What do all these different variations in the rate of discount mean: in your opinion do not they mean changes in the value of the sovereign?—All of them must affect the value of the sovereign, the same as anything else.

4657. Then the present system does not exempt you from variations in the legal tender?—Not at all.

4658. Your belief is that the 20,000,000*l.* of legal tender paper, from not being removable by export to other countries, would give you a more uniform value of the legal tender than you now possess?—More uniform and more steady, a great deal.

4659. And that is your reason for suggesting it in preference to one which produces such great oscillations?—Yes.

J. Twells, Esq.

17 July 1857.

4660. What is the object of convertibility, in your opinion?—The object of convertibility, I conceive, is to get in possession of any one thing which I can possibly require, whether it is gold, or a horse, or broad cloth, or anything; and I find that a note is as easily convertible, and I conceive that it always will be as convertible as long as it has the sanction of a stable Government.

4661. Do you not believe that the object of convertibility is, that if you part with any property for the legal tender, that legal tender shall furnish you with as much property in return as you part with?—Quite; it is merely the medium of exchange.

4662. And do you believe that with the legal tender which you suggest, you would have more confidence that it would be of the same value in December as in January, than under the present system?—Quite so; it would keep the same relative value with everything which you required to purchase or to sell.

4663. And you have suggested the amount of 20,000,000 *l.* only because upon experience you have found that 20,000,000 *l.* of Bank notes have been kept at par with gold?—Quite so. There is no reason for fixing the arbitrary sum of 20,000,000 *l.*; but it seems that when there has been 20,000,000 *l.* of circulation, we have gone on well.

4664. What you mean by your suggestion, I presume, is, that having ascertained the amount of paper which would at all times be at par with gold, according to experience, you would fix upon that limit, and you have a belief that it would preserve a more uniform rate of money than we now possess, because not liable to exportation?—I have very little doubt of it, but always with the condition, that it not having been tried, I should be unwilling to speak confidently; it is, however, quite my impression.

4665. All the object which you wish to possess in a legal tender is, that it should preserve as far as possible a uniform purchasing power?—Yes, and a steadiness of character.

4666. You have been asked about the pound of account; do you remember how the pound arose; what it was originally?—A pound of silver.

4667. Is it a pound of silver now?—No, certainly not; it is varied.

4668. Then, if it is not a pound of silver, what is it but a pound of account?—I have no idea what it can be otherwise, fairly and properly.

4669. Do you remember the changes which have taken place in the pound since it was first instituted here?—Yes.

4670. Do you remember that, in the time of Edward the First, it was made 20 *s.* 3 *d.*?—Yes.

4671. That, in the 18th of Edward the Third, it was made 22 *s.*; and in the 20th of Edward the Third, it was made 22 *s.* 6 *d.*?—Yes.

4672. That, in the 27th of Edward the Third, it was made 25 *s.*; and that, last of all, after undergoing a great many changes, in the 56th of George the Third, it was made 66 *s.*?—Yes.

4673. Were not all those alterations of the pound made by Act of Parliament or Government?—To be sure they were.

4674. Mr. *Wilson.*] You think that there is no intimate connexion between the value of a pound and the value of a sovereign?—Not at all.

4675. You say that a 5 *l.* note ought always to purchase the same quantity of commodities as five sovereigns?—No; I do not know that it will do that, because I should look then upon sovereigns as so much bullion; we should have nothing to do with them; they might be of less or more value than a 5 *l.* note, comparing it with gold.

4676. I understood you to say just now that the 5 *l.* note was always of equal value with five sovereigns?—No; it will produce as much now as five sovereigns, but it will be subject to variation.

4677. You mean, that at the present time it produces as much as five sovereigns?—At the present time, but it will vary: the sovereigns themselves vary as much as the note does.

4678. Have you ever known a time since 1819, when the 5 *l.* note has produced less or more than five sovereigns?—No.

4679. Have you ever known a time, since 1819, when five sovereigns and a five pound Bank of England note were not identical?—No.

4680. Did you ever know any time, before 1819, when guineas were sold for more than 21 *s.*?—Yes, light guineas were.

4681. Heavy

4681. Heavy guineas were sold as high as 27*s.*, were not they?—No; I should think they were not sold at all; it was light guineas only that were sold; it was illegal to sell heavy guineas.

4682. Are you not aware that during the war there was a great contraband trade in gold?—Yes; it was bought up by Government, who thus created a scarceness of gold; and when the supply was limited, the price necessarily rose.

4683. Are you not aware that during that time a guinea, representing 21*s.* of money in account, was worth as much as 27*s.* or 28*s.*?—Yes.

4684. But you have never known any discrepancy, since 1819, between the value of a sovereign and the value of a pound?—No, I do not call to mind any; I have never had any occasion to look at it, but I am not aware of any; I know that the light sovereigns were traded in to a great extent.

4685. Suppose that a man contracts a debt with another, and promises to pay him at the end of a year, a debt of 10*l.*, and suppose that, under your proposed regulations, at the beginning of the year a 10*l.* note, and the 10 sovereigns are of identical value, but that at the end of the year the 10*l.* note and the 10 sovereigns are not of identical value, but that the 10 sovereigns have become worth 12 *l.* of money in account, with what would you pay the man?—With the Bank note, if it was a legal tender. I have nothing to do with the sovereigns; I quite exclude the sovereigns from it. You are making the gold to be the measure of value; now I do not want to measure it by anything.

4686. Did you ever send gold to the Mint to be coined?—Yes.

4687. You weighed your gold before you sent it, and ascertained the exact number of ounces which you sent, I suppose?—Yes.

4688. When you got it back, how did you ascertain whether you got the proper number of sovereigns as representing your gold?—By counting them.

4689. You must make a computation; suppose you send 100 ounces of gold, how would you be able to know the number of sovereigns which you ought to get back for your 100 ounces of gold?—We did not compute, we took the Mint as being correct; we took whatever they sent us, and found it correct; we never made an estimate of it.

4690. You say that you counted the sovereigns?—Yes.

4691. Suppose you send 100 ounces of gold, if you count the sovereigns to ascertain their accuracy, I suppose you must expect, in counting them, a certain number of sovereigns?—Yes.

4692. By what rule do you determine the number?—We have no rule to determine them; we sent 10,000 *l.* of gold to be coined.

4693. What do you mean by 10,000 *l.* of gold?—The produce of 10,000 *l.* in Bank notes.

4694. But when you sent it to the Mint, you weighed it, to ascertain its precise weight, did you not?—Yes.

4695. You ascertained the precise number of ounces which you sent to the Mint?—Yes.

4696. And according to the number of ounces sent, you expected to receive a number of sovereigns in return?—Yes.

4697. How did you determine the number of sovereigns which you were to receive in proportion to the number of ounces which you sent?—That is not the system which we went upon. I can tell you how it arose. There was a great deal said in the House of Commons some years ago about the delays at the Mint, and merely as an experiment, we went into the bullion market, bought 10,000 *l.* of gold, gave 10,000 *l.* in Bank notes for it, and then sent it to the Mint to see whether there was any profit or any loss; it was more for curiosity than for anything else, for a good deal had been said in the House of Commons about the negligences of the Mint; we said, for so much gold we get so many sovereigns back, and I recollect when we came to reckon the interest, we cleared about 2½ per cent. upon it as profit.

4698. In what year was that?—I do not know when it was. Two or three years afterwards some gentlemen in the House of Commons moved for a return of all the money that had been coined by individuals, and by the Bank of England, and I was very much surprised to see, supposing that many others might have done the same as we did, that "Spooner and Company 10,000*l.*" were the only private parties who had sent anything into the Mint.

4699. Was it since 1819?—I should think it was about that period.

J. Twells, Esq.

17 July 1857.

4700. Was it after the resumption of cash payments?—Yes, I know that we were the only parties who sent in, and we did it just to satisfy ourselves, to see what the system was. We sent a certain amount of gold which we debited to the Mint, and we gave them credit for so many sovereigns, and upon that transaction, I remember perfectly well that we cleared 2½ per cent.

4701. How much money did you expect for every ounce of gold that you sent?—We never troubled ourselves the least about that, we never thought of such a thing.

4702. Then how did you ascertain that you got 2½ per cent. profit?—We kept an account, we debited the Mint with 10,000 *l.* of gold, and we credited them with the number of sovereigns which we got back, and when we charged the interest we found that we had as many sovereigns as gave us 2½ per cent.

4703. Suppose that you received from a person abroad 100 ounces of gold, and that he requested you, his bankers, to send those 100 ounces of gold to the Mint, and to get them coined, and place the money which they produced to his credit, in account, you would send 100 ounces of gold; by what means would you ascertain how much money you should receive for them and place to your customer's credit?—By what they gave us back.

4704. You would take just what they sent you?—Precisely.

4705. Without any test of its accuracy at all?—Quite so, because we should know within a trifle; we know the value of gold and whatever they gave us, we should credit the party with.

4706. Mr. *Cayley.*] In point of fact, was not gold bought in that way during the French war?—Yes; there was no other way of purchasing it then but by bank notes.

4707. When you suggest these 20,000,000 *l.* of legal tender notes, in the place of gold, do you do it with the view of preserving a more uniform measure of value than now exists?—Quite so.

4708. You are dissatisfied with gold, because it is not a steady measure of value; is that so?—Quite so, and it must be variable.

4709. You do not recommend the Bank notes to be issued without limit, do you?—I should not be at all afraid of it, because I go by the experience of former times; they were issued without limit, and we find from the various committees which there have been upon the Bank of England that they all speak of the discretion and judgment with which the Directors have always managed their issues.

4710. You have no doubt of the discretion of the Bank of England?—Not at all.

4711. But you now suggest, not the system which existed during the French war, but a limited amount of paper?—Exactly.

4712. If 20,000,000 *l.* of Bank notes could issue now at par with gold, do you believe that if there were 16,000,000 *l.* only of legal tender instead of 20,000,000 *l.*, that 16,000,000 *l.* of legal tender would be more valuable than the 20,000,000 *l.* of legal tender, taking the last two or three years, that it would purchase more commodities?—No, I do not know how you could compare it very well.

4713. If 20,000,000 *l.* is the amount required for commercial transactions as the legal tender, and it is maintained at par in consequence of its convenience for the necessities of commerce, would a less quantity, do you suppose, be more valuable, and command a larger amount of commodities?—If it was limited to 16,000,000 *l.*, if there was no issue besides, it must be.

4714. It would be of greater value?—Yes.

4715. Then, you believe that the paper, if a legal tender, is affected in value by its amount as much as any other article of commerce?—I think that is one of the advantages of paper; by a judicious regulation, you may make it more safe, more sound, more convenient for the welfare of the country, and for the energies of the country, than anything which is dependent upon barter.

4716. And you can give to the public in their legal tender a more uniform purchasing power?—A more uniform and a sounder currency for any practical purpose whatever.

4717. You have been asked whether you have observed any discrepancy between the Bank note and the sovereign since 1819, and you have stated that you have not?—Yes.

4718. But you have observed, have you not, during that period, very great distress

distress in consequence of the struggle to obtain convertibility?—Frightful distress, at different periods.

4719. We may gather then, from your examination, that your object in your suggestions is to obtain for the public a greater security for their legal tender, and to preserve a more uniform value of money than has hitherto existed?—Exactly.

4720. You consider that that uniform rate of money is a thing that is quite within the power of possibility?—I should think it must be; I cannot conceive that there is not sufficient sagacity in the country to arrange a perfectly safe and sound system of that kind.

4721. You think that such a system would be better for trade, but worse for the banker?—Quite so.

4722. Mr. *Glyn.*] If I understand your plan rightly, it is this: that you would have two species of circulation, namely, a certain amount of legal tender issued either by the Government or by the Bank, and that you would also have another part of the circulation issued by the Bank Directors or by the Government upon bullion, but that bullion not to be fixed, as it is by the Act at present, but to vary?—Yes.

4723. Mr. *Spooner.*] You would have that payable in bullion?—Yes.

4724. Mr. *Glyn.*] And, of course, issued by the Bank according to the varying rate of bullion in the market?—Exactly so.

4725. Mr. *Spooner.*] What is your opinion of the effect of the letter issued by the Government in October 1847?—The effect of that letter we well know was to relieve the pressure instantly.

4726. What would have been the effect if that letter had not been issued?—The effect must have been either that the Bank of England must have taken upon themselves to have violated the Act, or there must have been one of those convulsions in society which one cannot describe and cannot imagine: it must have been a thorough breaking up of society. What shape it might have assumed it is impossible to state.

4727. Do you ever recollect such a crisis as that during the time of the inconvertibility of the note?—Nothing of the kind; never.

4728. Then you attribute that condition to the effect of the Act of 1844, which compelled the Bank to limit their issues by the amount of bullion which they had in their possession?—Entirely.

4729. And without regard to whether it was an internal drain or an external drain, they had no discretion whatever in the issue of their notes?—None at all, without violating the Act.

4730. Is it your opinion that the distress then was greatly aggravated by the full conviction which there was in the country that the Bank were coming to a point at which they would be obliged to stop?—There was a very great demand for money indeed at that time.

4731. And the demand then was not for gold, but for Bank notes, to enable persons to discharge their transactions?—Certainly; there never, that I am aware of, was any mistrust of the Bank note; it was the notes they wanted; not gold for their notes.

4732. Was not that demand upon the Bank greatly aggravated by persons hoarding their Bank notes for fear that days were coming when they should not be able to get them?—I dare say it would be so; but that hoarding comes as a necessary precaution, for every banker at such a crisis as that is sure to provide himself with more notes than he wants; he must pursue the path of safety; directly that danger is gone, then the Bank notes are poured out; that state of things must necessarily arise in a time of great scarcity. There was an advantage before 1815; by practice you always knew what your customers required to a very great nicety; in such times as these you cannot tell, and everybody must provide himself with more Bank notes than he is likely to want; we do not like to subject ourselves to the chance of being unduly called upon.

4733. If the plan which you recommend was adopted in the case of a great demand for bullion to pay for corn, would not that plan prevent the Bank being brought into the crisis in which it was in the year 1847?—Entirely; the demand for bullion would then have nothing to do with the pressure on the Bank; it would not stop the importation of any quantity of corn, I feel satisfied; gold being then just like any other mercantile commodity, the merchants, if they found it their interest to bring corn, would bring it.

J. Twells, Esq.

17 July 1857.

4734. And the gap which is created in the circulating medium by sending bullion out to purchase corn would be filled up for the time by the inconvertible note till the exchange is turned, and then gold would naturally flow in?—Yes, it would naturally flow in just as any other commodity.

4735. But the Bank note, if issued entirely by the Bank upon the Bank's own responsibility, you would still keep liable to be paid in gold; you do not want to make any change in that?—Not at all.

4736. There would be no necessity for it?—None whatever.

4737. There are notes to the extent of 14,500,000*l.* now issued upon securities?—Yes.

4738. Do not they, upon the face of them, bear a promise to pay on demand?—Yes.

4739. Supposing the demand was to extend to them, and to pay upon that 14,500,000*l.*, would they be able to be paid?—No, they would not be able to be paid; but the country is now put in such a position that they cannot demand it.

4740. Then paper is issued which is not capable of being paid on demand, but it is done in the confidence that the country would be in such a state before that demand could be made that it would be utterly impossible for the country to demand it?—Yes, quite so.

4741. Then it bears upon the face of it a fallacy, just as much as an inconvertible note?—Yes, just the same. Therefore I think it would be only the fair and judicious and honest course to take, that those notes should bear an impress upon them of what they were intended to be.

4742. You therefore recommend that those notes instead of being issued upon securities, and pretending that they are issued on gold, should bear upon the face of them that they are issued upon securities, and you would recommend that those notes so issued upon securities, should be made a legal tender?—Quite so.

4743. And whether the amount should be 14,000,000 *l*, or 20,000,000 *l.*, is a question upon which you do not give a positive opinion?—Not at all.

4744. But your experience has shown you that when there was a steady issue of about 20,000,000 *l.*, the trade was carried on steadily and prosperously in the country?—Yes; that is why I say 20,000,000 *l.*; but it is quite possible that 14,000,000 *l.* would effect a great deal; that is a matter which experience only can decide.

4745. You have stated that the Act of 1844 is not found fault with by the capitalists at all, as far as they themselves are concerned?—Not at all.

4746. But that it is found fault with by them, because they see that it is inflicting great distress and evil upon the country at large?—Quite so.

4747. The Act of 1844 enables you, in point of fact, to make 7 or 8 per cent. of your capital, instead of 4 or 5?—Quite so.

4748. But, judging from what you have seen of its effect upon the country, you consider that it is undermining the real prosperity of the country?—Yes; very much.

4749. It is stopping the energy of the people?—Quite so.

4750. Are you aware of any works which would be plainly profitable and advantageous to the country, having been stopped entirely, from the danger of not being able to procure a sufficient quantity of the circulating medium to carry them on to completion?—I do not know anything that I can refer to; we frequently hear of such cases. We have heard in the metropolis, during the last winter, how much building has been stopped; that is amongst one class; we know that they are obliged to get their bills discounted; the facility of discount being stopped, the works cease, and that throws all the men out of employment. Whether it is for good or bad, that these people should trade in that way, I do not know, but I understand the fact to be as stated.

4751. It has been stated before this Committee that, in the case of a great demand for corn, if the issues are properly regulated, 40,000,000*l.* worth of provisions may be brought in by a loss of not more than 4,000,000*l.* of bullion from the Bank; do you think that possible?—I cannot go through the workings of such a problem at all; I cannot see the way in which it can be done, but the importation of corn, I have no doubt, would come in without at all affecting our domestic currency, if we had a judicious currency. If you want any commodity whatever, set the merchants to work, and if it is to be found in the world, they will get it; it is no question how they pay for it.

4752. You

4752. You mean, without affecting an inconvertible currency?—Yes.

4753. But it would produce a great effect upon the currency in its present state?—Yes.

4754. With the currency in its present state, what do you think would be the effect of a very large importation of corn?—It would bring us into the same dilemma as we have been in before; it might be to the same extent as in 1847 or not, but it must have a tendency that way.

4755. And any regulation of the issues founded upon the principle of stopping the bullion going out of the country would necessarily be stopping corn coming into the country?—Yes.

4756. You could not do the one without the other?—Of course not.

4757. Mr. *Vance*.] I think you have stated that the inconvertible currency which you recommend would not fall to a discount as compared with gold or the convertible currency which would exist with it?—Yes.

4758. Do you not think that the convertible currency and the gold would rise to a premium as compared with the inconvertible currency?—In my opinion, not; it is a thing which you can only test by trying: my impression would be, that it would not, but if it did I see no harm in it.

4759. You say that the inconvertible currency would be used for the internal circulation?—Yes.

4760. Would not the convertible currency be used for internal circulation as well as for shipment abroad, to pay for goods, or to regulate the foreign exchanges?—Perhaps less for internal circulation.

4761. Do you not think that the double demand for the convertible currency and the gold, as compared with the single demand for the other, would make the former more valuable, and send it to a premium?—I should very much doubt whether it would.

4762. Mr. *Spooner*.] But should there be a difference between the two papers, one bearing a premium and the other a discount, do you consider that there would be any very great evil arising from it?—Not the slightest.

4763. Nothing to be compared with the evils which we feel when gold leaves the country under the present currency?—No. Upon an untried thing we cannot speak with great confidence; but I should have no idea of the least inconvenience if there were two prices, which I should very much question.

4764. You have been asked about the French assignats; is not the difference between the currency which you recommend and the assignats just this, that the Government are bound to take back whatever they issue?—Precisely; and that makes all the difference.

4765. And, with the French assignats, they refused to take back what they had issued?—Yes. A corrupt government may commit such an excess as they did in France, where the amount of their assignats was, if I remember right, about 300,000,000*l.* sterling; they could not receive them back; they could not get their taxation, on account of the revolution which was going on, therefore the assignats fell to nothing. I do not know whether it may be proper to mention it, but in my recollection we always used to pay the duties in Exchequer bills; it was a practice with us for several years; I have bought thousands of them; it was always a rule with us, supposing we had 10,000*l.* to pay to the Excise, to buy bills when they were at 2*s.* discount; that was 1*s.* for the brokerage, and 1*s.* which we got by it; it just paid us for the trouble of doing it. That always kept the Exchequer bills from falling to a ruinous discount. At that time they were payable at three months after their date, then it was altered to 12 months, which precludes them from being paid in for taxes. If the former practice was in existence now, Exchequer bills could never have arrived at the depreciation which we have seen.

4766. At the time you mention three months after the Exchequer bills had been in circulation, any person having moneys to pay into the Exchequer might tender those Exchequer bills in payment?—That was the rule.

4767. And that, in point of fact, gave such a character to the Exchequer bills that you might always be sure that you could not invest wrongly in Exchequer bills?—Yes.

4768. What is the effect upon the Exchequer bill market under the present system?—There is nothing which we possess so similar to the French assignats as our Exchequer bills. Government issue a paper and will not take it back themselves

J. Twells, Esq.

17 July 1857.

themselves for taxes; that approaches nearest to the French assignats, though it is perfectly safe by being paid in a twelvemonth, but in character it is just the same except for that; that was the character of the assignat; the government issued it, and would not receive it back again.

4769. You recollect perfectly well the distress which was occasioned by the Act of 1819?—Yes.

4770. And you recollect also that the distress was so great, that in the year 1822 several measures were brought forward for the purpose of correcting the distress, and it was alleged that the distress had arisen from the too sudden contraction of the issues of the Bank of England?—Yes.

4771. What was the effect of the increased issue again of the convertible paper; was not that the cause of the panic of 1825?—Quite so; there was a large issue, in order to relieve the distress, which gave a short-lived prosperity; then that was withdrawn again, and then came the panic of 1825.

4772. It created a speculation in 1825, and was then withdrawn?—Yes; it was a sort of see-saw.

4773. Do you recollect the nature of those measures which were brought forward?—Yes, very well.

4774. There were three measures brought forward?—Yes. The distress was so great that, as I dare say you recollect, a body of those fine stout fellows, the colliers in Staffordshire, borrowed a waggon and filled it with coals to bring them up to the Prince Regent; they got as far as Worcester; some gentlemen there or at Evesham, I think, stopped them, thinking that it would lead to an outbreak if they reached London; they were coming up in despair, and had loaded the waggon, and dragged it so far on the road to London; the distress was cruel at that time.

4775. Do you recollect the measures then brought in by Lord Castlereagh, and the grounds which he laid for bring them in in 1822?—It was at that time, I think, that Lord Liverpool stated that the distress arose from having superabundant crops.

4776. That was in 1821?—He stated that it was that abundance which led to the distress, and to relieve that distress it was said, that there was as much as 5,000,000 *l.* issued by the Bank of England, either in one or two days; it was then also that the circulation of 1 *l.* notes, I think, was extended till the 1st of January 1833, in order to remove the pressure arising from the circulation being contracted by means of the country notes being called in. Then things recovered again, and there was another Act which shortened the time. I think it was on that occasion that the distress was so great that the late Mr. Huskisson said he did not approve of the measure, but he should support it in order to revive the dormant spirit of speculation in the country.

4777. Because that speculation had been checked too suddenly?—Yes.

4778. Then the whole result of your experience is this, that since you have had a convertible note only there have been continual struggles between prosperity and adversity; that when adversity has got so deep that the Government have been obliged to come forward to relieve it, it has created a false prosperity only to make that adversity return again with greater force?—That is my experience of the facts.

4779. And it is to correct that state of things that you recommend the plan which you have laid before us?—Quite so. I think you will find that some of those wild schemes, for instance, the American mines, started immediately after one of these violent issues of paper; after that, the South American loans, all following some of those rapid issues which were not called out by the legitimate wants of trade.

4780. And you believe from your experience that if such an issue of paper takes place as you have recommended, upon the foundation which you have recommended, the country will not be exposed to these violent fluctuations?—I cannot see how it can be possible.

4781. Mr. *Puller.*] You have stated to the Committee that the Act of 1844 has worked advantageously to bankers and capitalists, by enabling them to make greater interest upon their money than they did before?—Yes.

4782. What has been the general rate of interest for the last year or two?—7 per cent., I think, has been the highest; at this moment it is 5½.

4783. You speak of the Bank rate?—Yes.

4784. What

4784. What was the general rate of interest before the Act of 1844? You cannot quite take the Bank rate then, because they never went below 4 per cent., did they?—Yes, I think they did.

4785. They never went below 4 per cent. previously to that time; what was the general rate of interest for the 10 years before 1844?—I really do not know; the tables show; I thought that there had been a great many fluctuations.

4786. What was the average rate of interest for the 10 years before 1844, compared with the 10 years since?—I should think it was about 4 per cent.; I know that it was 4 per cent. for a good while.

4787. Are you aware that for 11½ years since 1844 the Bank rate of interest has been below 4 per cent.?—Yes, I should think it had.

4788. In point of fact, during a good many of those years it has been as low as 2½ per cent.?—Yes, lower than that.

4789. Two per cent.?—Yes, I think so.

4790. If, upon the whole, the rate of interest during the last 10 years has been less, or at all events not greater, than it was before, can you say that the Act has given any great advantage to the bankers and capitalists?—I should say it has.

4791. In what way?—This low rate of interest operates against bankers, it is true, but I should have very great difficulty in explaining to you, unless I could have the pleasure of showing you the books, how much higher the profits are now than they used to be formerly. When interest is low, from excessive issues, we have large deposits; when interest is high, we get the advantage in that way.

4792. At this moment?—At this moment they are high.

4793. The last year has been perhaps rather exceptional?—We will take the average. Say that 4 per cent. is a fair average; bankers would never complain of that; they think it a very fair rate, and would be perfectly satisfied with it. When it rises beyond that it operates very well indeed for them.

4794. You cannot take one year by itself, can you, as a sample of the whole effect?—No. It is always the case when money is at a moderate rate, that we have more demand for it; we lend more; it operates in that way. When it gets higher we get more than a fair proportion for it; we get more than we ought to do.

4795. Do you mean to say that you lend more money when interest is low than when it is high?—Yes; we have more money to lend. All bankers have more money to lend when the interest is low.

4796. You have explained the plan of having a fixed amount of 20,000,000*l.* of inconvertible notes, and of having an unlimited amount of convertible notes at the same time?—Yes.

4797. Both of them to be put out by the Bank of England?—Yes.

4798. Do not you suppose that the Bank would put out all their inconvertible notes before they put out any convertible notes?—If they were wise they would; it would be the proper course for them to pursue.

4799. Then we should have a currency consisting of a limited amount, say 20,000,000*l.* of inconvertible notes and an unlimited amount of convertible notes, which would fluctuate according to the demands for gold and silver?—Quite so.

4800. Then the whole amount of the currency made up of the convertible and the inconvertible notes would be subject to just as much fluctuation as it is now, when it is made up altogether of convertible notes?—I cannot possibly see that. The inconvertible notes would secure an adequate circulation, and would render a panic almost an impossibility.

4801. The whole currency being made up of the convertible and the inconvertible notes, if either of those parts is subject to fluctuation, the whole amount is subject to fluctuation, is not it?—I think there would be very little fluctuation with the inconvertible notes.

4802. Mr. *Cayley*.] There would be no alteration, in point of fact, in the 20,000,000 *l.*, but if there was any amount issued besides upon gold, there would be a fluctuation upon that small quantity?—There might be.

4803. The fluctuation now takes place upon the whole 20,000,000 *l.* which is out?—Quite so.

4804. It would then only take place upon the small amount issued upon bullion?—Exactly.

4805. And, inasmuch as the Bank could, as a fact, decrease its circulation, in all

J. Twells, Esq.

17 July 1857.

all probability there would not be more than the average of 20,000,000 *l.* still circulated?—Most likely not.

4806. Therefore there would be very little of that portion which was convertible, and, consequently, liable to fluctuation, in circulation?—Very little; and it is a question whether there would be any alteration in value in it.

4807. You are willing to put the amount of inconvertible notes at 14,000,000*l.*; you do not care about the quantity so long as it does not exceed the quantity which has been in active circulation within the last 12 or 14 years?—Just so.

4808. Mr. *Puller.*] Does not it come to this, that if you put the limit of your inconvertible notes at 14,000,000*l.*, according to the experience which we have had for some years past, your circulation will have precisely the same amount of fluctuation which it has had; if you put it up to 20,000,000*l.* or 22,000,000*l.*, no doubt there will be a limit to that fluctuation, because it will never fall below the 20,000,000*l.* or 22,000,000*l.*?—Then are you not assuming that the Bank of England are to issue any amount of these notes?

4809. You said that they were to be unlimited?—It would be a very desirable thing to prevent the Bank of England being compelled to buy all the gold which comes in, because, as we have seen, you force them to issue 20,000,000*l.* of notes into circulation; you force them to issue more than is wanted; then that produces those wild speculations which have led to so many disasters. I do not see any occasion for compelling the Bank of England to be a warehouse for all the gold which comes into the kingdom; let them use their discretion, and take just as much as is wanted for their own use, and for the use of the community, which they must judge of; their experience will be better than fixing any amount.

4810. Mr. *Hildyard.*] You have told us, as we are aware, that the profits of some of the joint stock banks have been very great indeed, varying from 15 to 25 per cent., or perhaps more; can you explain to me out of what those profits have arisen; I do not mean minutely; can you state how it is that such very large profits have been made with the rate of interest so low, as we have been told that it has been on the average during the last ten years, namely, something below 4 per cent.?—No; that is a mystery which I cannot solve.

4811. Do you imagine that joint stock banks lend to tradesmen at very exorbitant rates?—They may sometimes charge high rates.

4812. I mean at rates much higher than the Bank of England rate, for instance, at the same time?—I do not know that I should say that I am aware of many which do so; now and then a case comes before me where I know that they have charged very high; perhaps one or two per cent. beyond what I think any private banker would do; but probably the risk might justify it.

4813. If they have only exceeded the Bank rate by one or two per cent. in individual cases, and if four per cent. for the last 10 years has been the average of the Bank rate, I want to know how the joint stock banks have been making a profit of 25 per cent.?—That I do not know; they have some advantages from their great capital. Now and then instances may occur, of large profits from extensive transactions, but whether to an amount to produce such a large dividend I do not know.

4814. I am quite aware that they have an immense amount of deposits, but they pay a very high rate of interest upon those deposits?—They do.

4815. Therefore there is only the difference, as far as the profit upon their deposits goes, between the rate at which they lend money and the rate at which they borrow it?—Yes; but they have some advantages from their immense capital. I can call to mind one instance in which a gentleman was in difficulties. He goes to a private banker and says, that he wants, perhaps, a loan of 200,000*l.* to extricate him; he offers a perfectly sound security, and he is a very wealthy man. The private banker declines it. He goes to a joint stock bank—this is at a time when money is at from two to three per cent; they will lend him the money, charging him six per cent., and getting an addition to their accounts. No private banker would do that; that is a large source of profit. They are perfectly safe, I have no doubt; it may be 20 or 30 years before they get their money back, but that is no object to them; all that time they are getting this high rate of interest. That is only one solitary case, it is true.

4816. The Bank of England have always an immense amount of deposits?—Yes.

4817. And

4817. And I think they pay nothing to the depositors, do they?—No.

4818. But the profits of the Bank of England are nothing like those which we are speaking of?—Not at all; the joint stock banks pay a very high rate of interest to their depositors. You cannot tell without having access to their accounts what they are; but it does seem very prodigious.

4819. Do the Bank of England, as far as your experience goes, give any peculiar privileges to persons who keep their accounts with them?—No, none whatever.

4820. They do not show any favour in discounting bills with respect to merchants who keep accounts with them?—It used to be their custom always to require the party to keep an account with them; indeed, the same as other bankers; no other banker discounts, except for a customer, and it is the case with the Bank.

4821. I apprehend now the Bank of England discount for parties who do not keep accounts with them, do they not?—I cannot speak confidently; I think I have heard that they occasionally do; I am not aware of it, but I think I have heard that they have done such things recently; it used to be the practice always to require parties to open an account if they discounted.

4822. That is to say, it used to be their practice never to discount bills for parties who had no account with them?—Exactly.

4823. You do not know how that stands at present?—I do not; I have an impression that I have heard that they have departed from that practice sometimes; whether it is a rule now I really do not know.

4824. Mr. *Vance.*] But the keeping of that account is a nominal thing; the Bank of England do not require parties to have a considerable deposit in order to grant them the amount, do they?—Not at all.

4825. They are satisfied with a deposit of 5*l.* or 10*l.*, are they not?—They have altered their system; it used to be the rule with them that they seldom opened an account, unless they had a deposit of 500*l.*; it was a nominal thing, because you paid them 500*l.*, and might draw it out the next day and leave nothing; they never troubled themselves about it.

4826. Mr. *Hankey.*] Do you know that from your own experience?—It used to be the case years ago.

4827. I think your answer would lead to the inference that it is the present custom of the Bank of England that a person need not keep more than a nominal balance in his account; I infer that from your answer. Is that the case from your own knowledge?—No, not from my own knowledge, but I have no doubt of the fact; it is the case with any banker; it is the case with us.

4828. You are not aware that that is not the custom of the Bank of England?—No, I do not at all know.

4829. Mr. *Vance.*] Do you know the custom of the Bank of England as regards their country branches?—Not in the least.

4830. You are not aware that at the country branches they would keep an account for anybody, discounting his bills, and being satisfied with a deposit of 5*l.* or 10*l.*?—No; I do not know anything of their country branches.

4831. Mr. *Glyn.*] In the business of the Bank of England, in the Government funds, does your experience, and I can appeal to no man of greater experience than yourself, agree with mine that nothing could be done better than that is done generally for the public and for the bankers?—I think nothing could possibly be better; indeed, in everything connected with the Bank the machinery is excellent, and they spare no expense whatever in accommodating the public. Nothing could be better, I should say.

Martis, 21° *die Julii*, 1857.

MEMBERS PRESENT.

Mr. Ball.	Mr. Puller.
Mr. Fergus.	Mr. Martin Tucker Smith.
Mr. Gladstone.	Mr. Spooner.
Mr. Glyn.	The Chancellor of the Exchequer.
Mr. G. A. Hamilton.	Mr. Tite.
Mr. Hankey.	Mr. Weguelin.
Mr. Hildyard.	Mr. Wilson.

THE RIGHT HON. THE CHANCELLOR OF THE EXCHEQUER, IN THE CHAIR.

David Barclay Chapman, Esq., called in; and Examined.

D. B. Chapman, Esq.

21 July 1857.

4832. *Chairman.*] ARE you the managing partner in the house of Overend and Gurney?—I am.

4833. How many years have you been in that house?—I have been in that house, altogether, rather more than 40 years. I came in in 1817.

4834. Have you taken an active part in the concerns of that house during that period?—Yes, throughout almost the whole of that period.

4835. You have had occasion then for many years past to watch the proceedings of the money market?—It is my immediate business.

4836. I need scarcely ask whether the business of your house mainly consists of discounting commercial paper?—It does.

4837. Your transactions I think are on a very large scale?—They are.

4838. Have you paid particular attention to the causes which regulate the rate of discount in this country?—Certainly.

4839. Is it your opinion that the rate of discount for mercantile paper is regulated to a great extent by the Bank rate, or, on the other hand, that the Bank rate of discount is itself dependent upon the general market rate?—I think that each affects the other; the market rate certainly is affected by the Bank rate, and the Bank rate is also, at times, affected by the market rate.

4840. In what way do you think that the Bank Directors have a power of influencing the general rate of discount, merely by fixing the amount?—When the demand for money is so considerable that the public have recourse to the Bank, it is clear that the Bank have then the power very much of regulating the rate; that is to say, if the supply in the market is not adequate to meet the public want without recourse to the Bank, of course the Bank can charge what rate of interest they please, and the public must submit to it.

4841. Does that state of things arise from the fact that the Bank is at the moment the largest dealer in capital for discounts?—It is rather difficult to say that; I am not sure that they are the largest dealers for discounts, but they are the largest holders of money at certain seasons of the year, during the quarters when the public money goes into the Bank; the money which has thus been abstracted from the market being in the hands of the Bank, the public must have recourse to the Bank for their supplies at those periods.

4842. The public balances at the Bank undergo a regular fluctuation every quarter, do they not?—They do.

4843. They are low at the commencement and high at the termination of the quarter?—Precisely.

4844. Then it would be in the latter period of each quarter that the influence of the Bank would principally be felt in the money market, according to your view?—Certainly; but it is not only limited to that. When the circulating medium in the hands of the public is at a low ebb, in proportion to the amount of

of commercial engagements afloat, then also the Bank have the control of the market entirely in their power.

4845. Do you mean to say, that when the quantity of bank notes in the hands of the public is low, then the Bank have a greater command of discounts?—Certainly.

4846. Do you find, practically, that the quantity of notes in the hands of the public does fluctuate considerably?—Very little; it is a singular thing that the amount of notes, for some time past in the hands of the public, has run between 18,500,000*l.* and 19,000,000*l.*, or it may be almost said to be from 19,000,000*l* to 19,500,000*l.*, with very little fluctuation, except there be any disturbing cause.

4847. Then the circumstance to which you last alluded, namely, the diminution in the quantity of notes in the hands of the public, would not have much influence with respect to the rate of discount?—Yes, it would; the diminution of notes in the hands of the public would have the immediate effect, assuming that the general business of the country was large, of driving the monied interest to the Bank for supplies of money.

4848. I thought you stated that that phenomenon was of rare occurrence, namely, any great diminution in the quantity of notes in the hands of the public?—Anything like a panic has the effect of driving the monied interest to the Bank for supplies of money. We had it exemplified, a very short time ago, in the case of the London and Eastern Bank, when they got into difficulties, and a feeling of anxiety arose. If you refer to the returns of the Bank at that time, you will find that the notes in the hands of the public increased in a fortnight by 1,000,000*l.* sterling. There was an abstraction from the Bank, and a putting into the pocket of the public, somehow or other, of 1,000,000*l.* of notes at that period. On the 28th of March last the notes in the hands of the public actually in circulation were 18,584,000*l.* in rough. They increased in the next week 500,000*l.* or thereabouts; and in the following week 500,000*l.* more, making, in a fortnight, an increase to 19,537,000*l.*

4849. Had not the dividends been paid then?—No; the dividends are not paid until the 11th of April.

4850. Mr. *Weguelin.*] A fortnight before payment of the dividends, do not the notes in circulation always go up?—We do not find it so in any other quarter.

4851. *Chairman.*] Will you compare the corresponding weeks in the preceding year?—On the 27th of March 1856 the notes out were 18,385,000*l.*; on the 3d of April they were 19,017,000*l.*

4852. Mr. *Wilson.*] Will you take the next week?—On the 10th of April they were 19,444,000*l.*

4853. Mr. *Hankey.*] What were they the following week?—£20,000,000; but then we come to the effect of the dividends.

4854. Will you take 1855?—In 1855, the notes out were 19,057,000*l.* on the 29th of March.

4855. Mr. *Weguelin.*] In the week previously to that they were lower, namely, 18,984,000*l.*?—Yes.

4856. Mr. *Hankey.*] Will you take the next week after the 29th of March?—They were 19,488,000*l.*

4857. What were they the following week?—£. 19,812,000. It is a very curious thing that, at that particular period, there certainly is an increase. I do not know how it is to be accounted for, but they certainly have increased in those years.

4858. *Chairman.*] Comparing the discount operations of the Bank of England with all other discount operations taken together, what relation do you think one bears to the other in point of quantity?—That is a question which I am really unable to answer.

4859. Without answering it with statistical accuracy, would you say that the discount operations of the Bank are a very considerable portion of the entire discount operations of the country?—Yes, a very considerable portion indeed; but without knowing (which I really do not know) what is the amount of bills of exchange which the Bank hold, I have no means of forming an opinion. If I knew that I should be able to give you an answer immediately.

4860. Mr. *Weguelin.*] Assume that there was an average of 10,000,000*l.* during the

D. B. Chapman, Esq.

21 July 1857.

the last year held by the Bank at any one time?—I should say that there are other establishments holding considerably more.

4861. *Chairman.*] Single establishments?—The general proportions are considerably more.

4862. Comparing the total discount operations of the country with those of the Bank of England, what should you say the proportion might be?—That is so extremely difficult a question, that I really cannot answer it.

4863. Would not the answer to that question throw considerable light upon the power of the Bank to determine the rate of discount by its own influence?—Perhaps I had better answer that question by referring to my own experience (for I do not pretend to anything else); and by stating how we act with reference to the Bank.

4864. Will you have the kindness to state your own practice?—When the Bank of England fix their rate at a certain sum, if we find that our occupation of money is such that we can get bills enough to keep our discounts at the Bank rate, we do not go below it; but if we find that we have large sums of money unemployed in consequence of the public preferring the courtesies of the Bank, which everybody knows, we then are obliged from necessity to cut a little under the Bank rate, as an inducement for the public to come to us; that is the practical working of the thing. If on the other hand we find that the demand for money is so considerable as to drive us to take money of the Bank, we dislike it; we do not want to get a profit by our transactions with the Bank in the ordinary course of things. We think that it is our natural business to go to the Bank during the quarters when the public money goes into the Bank; somebody must supply that vacuum, and it is our natural business to do it; but we should not like to carry on our ordinary business with the money of the Bank of England. Indeed, it would not pay us; the public would not pay us for first-class bills, which we alone deal in, a rate higher than the Bank rate, because they would rather go to the Bank themselves; we therefore should not be very long in that state which would enable us to carry on our business with the money of the Bank of England, because we should charge a higher rate than the Bank of England, which would have the effect of throwing off a great number of bills on to the Bank or other channels. That is the way in which we dress ourselves with reference to the Bank of England rate. If we cannot employ our money at the Bank of England rate, we are obliged to go below it. If, on the other hand, we find the necessity of frequently going to the Bank for discount, we check it by charging a higher rate.

4865. Which of those two states of things is the most frequent; does it more often happen that you find yourselves taking a less rate of discount than the Bank, or a higher rate of discount than the Bank?—In answer to that question, I have a book before me wherein I have our rate and the Bank of England rate contrasted week by week, and it is rather an interesting thing. I should say that we are more frequently below the Bank than above the Bank.

4866. Then, practically, the Bank rate of discount operates as a sort of a maximum to private discount?—Certainly.

4867. There is always a tendency in competition to bring the rate of discount somewhat lower than the rate of discount at the Bank?—I should say so; that is the general tendency.

4868. Then, practically, private customers must be perpetually comparing the market rate of discount with the Bank rate of discount?—Of course, a man who deals in an article is obliged to observe everything which affects that article. There are times when money becomes excessively abundant from accumulation, such as the receipt of the dividends. If the money coming from the dividends into the hands of the public is not counteracted by repayment of loans to the Bank, large sums become unoccupied; and it is better worth the while of the persons receiving those dividends to take a lower rate of discount than to keep their money unemployed, and therefore we get very much below the Bank then. I have known our discounts to be as much as 1 per cent. below the Bank. That is very much the condition of things at the present moment. There have been a very great many discounts taken at 5 per cent., or 5¼ or 5⅛, when the Bank are charging 5½, because large sums have accumulated in certain hands, and the money must be employed at some rate.

4869. As soon as you find, by watching the state of the market, that there is a considerable

a considerable quantity of capital ready to seek employment at a lower rate than the Bank rate of discount, your disposition is somewhat to lower your rate?—We are obliged to do it; it is not whether we like it or not. The competition for banking occupation would be so great that we should be high and dry, so to speak, if we did not do so; we should be full of money, and we should not know what to do with it, if we did not go with the general tone of the market.

4870. Then, in fact, the way in which you guide yourself is this: you take the Bank rate as a sort of general guide, and perpetually correct it by the state of the market?—By the supply and demand.

4871. So that, if the Bank of England rate were not to fluctuate pretty correctly according to the state of the market, you would be forced to depart somewhat widely from it?—Certainly.

4872. I suppose you find that practically the Bank Directors keep their rate pretty closely in accordance with the market rate?—Precisely; that is what I said; that we are both affected by each other. The Bank could not long remain at a very great distance from our market if we were one per cent. below them, because they would lose the whole of their discounts.

4873. If the Bank were to keep their rate one per cent. or one and a half per cent. for any time above the market rate, the public would cease to go to them?—Certainly.

4874. On the other hand, if they were to keep at one per cent. or two per cent. below the market rate, their funds would very soon be exhausted?—They would get the whole of the discounts; the thing is done to the greatest nicety.

4875. Have you at all considered the operation of the Act of 1844, with respect to the Bank rate of discount?—I cannot say that I have, with respect to that particular point.

4876. Have you heard it alleged that the operation of that Act has been to cause greater fluctuations in the Bank rate of discount than existed previously to 1844?—I do not know that I have heard that, but I have a paper here which will answer that question immediately; it is the rates of discount which we have charged since 1824 up to the present time, and I have had the average taken out for each year.

[*The Witness delivered in the following Paper:*]

RATES of DISCOUNT for First Class BILLS at the undermentioned Periods.

Witness.] It seems to me that the rates since the Act have been lower than they were previously.

4877. Still there were considerable inequalities in the different years from 1824 to 1844?—There were, very considerable; there were a variety of changes in those periods; but those are the averages.

4878. The notion that there was a uniform rate of discount in the 20 years from 1824 to 1844 is not at all consistent with the figures in the paper which you have delivered in?—Those are the rates of our house; the average rates which we have charged; I do not know what the Bank rates were then; I could tell you for several years past the Bank rates, but I believe the Committee have them.

4879. During those periods, was there a uniform nominal rate of discount kept by the Bank?—I am not prepared to say that; I should rather doubt it.

4880. Were your proceedings at all hampered by the existence of the usury laws?—Exceedingly hampered.

4881. Were you ever able to charge more than 5 per cent. at that time?—No, we had very great difficulty. In the first place, we were prevented keeping capital in the house; I am speaking of 30 years ago; we then acted as brokers, and were obliged to act as brokers until that Act was repealed.

4882. Would

4882. Would not the repeal of the usury laws have made a difference in the apparent rate of discount in some cases?—I think that the repeal of the usury laws has not injuriously affected the rate of interest, but the contrary. I think money has been decidedly cheaper since the repeal of the usury laws than before; and that statement shows it.

4883. Did not the existence of the usury laws, by leading to evasions and contrivances for defeating their effect, make a difference in the apparent rate of interest which was not real?—No question of it; there is no doubt that many persons were obliged to have recourse to all sorts of disagreeable expedients to put their transactions out of the pale of the usury laws, as it were. When money was beyond 5 per cent., what could they do? You must either give up business or charge 6 per cent. if the true value of money for undoubted securities reached that rate.

4884. The Bank never could avowedly fix their rate of discount at six per cent. while the usury laws were in force, could they?—They could not go beyond five per cent., but on securities of undoubted character, it ranged beyond five per cent., namely, upon stock, and things of that sort, in the shape of what was called continuation; it was done at six, seven and eight per cent. to the great body of the mercantile world.

4885. Advances of that description were not within the operation of the usury laws?—They defeated the usury laws by the mode in which they were done; in the same manner, when the true value of money rose beyond five per cent. in the mercantile world, other modes were adopted of lending a man money on long bills for given periods, and all sorts of things were done; in fact, it hampered the money market excessively.

4886. Do you consider that it is a correct description of the causes which determined the rate of discount, to say that it is fixed by the quantity of capital in the market which is applicable to the discount of mercantile bills, as distinguished from other classes of securities?—No; I think that the question of interest is affected by all convertible securities of a current character; it would be wrong to limit it simply to the discount of bills, because it would be absurd to say that when there is a great demand for money upon consols, or even upon Exchequer bills, as has ruled very much of late, at a rate much higher than the commercial rate, our commercial world is not affected by it; it is very materially affected by it.

4887. Still you cannot say that the rate of discount and the interest upon consols or Exchequer bills are determined by the same causes, can you?—Yes; that is to say, that a demand for money may arise from various causes; in the case of money which is wanted upon stock, it may arise from a loan being created, and more stock being held by the dealers than they are able to place, and they are obliged to hold it till the public take it off their hands; they then become great borrowers of money; that has been the case for the last year.

4888. Do you always find, that when the rate of discount rises the price of funds falls?—I do not think that that is at all certain; opinion has a greater effect than the rate of interest.

4889. Is it not the fact, that the persons who seek investments in consols and in Government securities belong to a different class from those who employ their money in discounting mercantile paper?—I think so, entirely; I do not think they have anything to do with it.

4890. Therefore the fluctuation with repect to discounts arises from different causes than the fluctuation with respect to the price of consols?—I think, as I observed before, that we are affected by those different causes which generally operate upon the money market. When sound and current securities, such as bankers acknowledge to be so, are in the market, and people want to borrow money upon them, it certainly has its effect upon commercial bills; for instance, I can hardly expect a man to let me have money at 5 per cent. upon commercial bills, if he can lend his money at the same moment at 6 per cent. upon consols, or whatever it may be; it affects us in the same manner; a man can hardly expect me to discount bills at 5¼ per cent. if I can lend my money at 6 per cent.

4891. There is a distinction between the price of consols as a permanent sale and a loan advanced upon consols?—Quite so.

4892. I am speaking of the interest to be obtained at any moment by an investment in consols. Does it not appear to you that that rate of interest is

D. B. Chapman, Esq.

21 July 1857.

determined by causes very different, although not altogether different, from those which determine the rate of discount at any moment?—We do not talk of investors who buy their 2,000 *l.* or 5,000*l*., or 10,000 *l*., as affecting the money market materially. If you ask me as to the rate of interest upon consols, I allude to people who deal in hundreds of thousands of pounds, who are what are called jobbers, who take large portions of loans, or make purchases in the market, and have to hold that stock till the public take it off their hands at a profit; these men, therefore, want money.

4893. Those are speculative dealers in the funds?—They are wholesome dealers; you may call some speculators; but there are others, called jobbers, who speculate, in one sense, but it is their business.

4894. Is not a very large portion of the funds held by trustees who seek permanent investments, and who would not risk their money in discounts?—There is no doubt of it; that is the class which gives to the 3 per cent. consols such an adventitious rate as there is at the present moment; it is not a natural rate; with money at 6 per cent., and, as we have had it, 6½, consols naturally would not be at 93; but the price of consols is affected by the demand for trusteeships, and things of that sort, which occupy our funds in the way they do.

4895. Have you had occasion at all to consider the operation of the Act of 1844, during the war for example, with respect to the limitation upon the issues of the Bank?—I have.

4896. How do you think it has worked? Has its operation been beneficial or otherwise?—I think that the management of the Bank has been so admirable, that we have all got along with it, so to speak; but it has been under great anxiety at times.

4897. From what circumstance has the anxiety arisen?—The anxiety has arisen in this respect, lest the Bank should not have it in their power to supply any needful assistance which might be required by the public.

4898. Has that difficulty in your opinion been created or aggravated by the provisions of the Act of 1844?—Decidedly so.

4899. Will you explain how it has that effect?—Because we know this, that by the Act of 1844, it is out of the power of the Bank to create any notes whatever beyond the bullion which they have in their hands to represent them.

4900. In addition to a certain amount of notes against securities?—Yes; I have accidentally before me the year 1847, which perhaps is not a very good year to take, but I will take it as it happens to be before me. The notes held by the Bank at a particular period of that year were 1,150,000*l*., and in October last year they were 2,550,000 *l*. You can easily understand the anxiety which the whole monied interest of the country, having their eyes open to it, must have felt at that condition of things, knowing that the Bank have a large sum, consisting of bankers' balances in their hands, probably fully equal to the latter amount, and also that they have their own ten branches to supply. It becomes extremely dangerous at such a time to rely upon the Bank at all for assistance, and the monetary business of the country is carried on at such a moment with very great anxiety.

4901. Do you think that the present restriction is too narrow, that it would be desirable to allow the Bank to issue a greater quantity of notes against securities?—That is a question of degree. I am rather inclined to think that it might be extended, but it requires very grave consideration. Some persons might suppose that if the public held 19,000,000 *l*. of notes you might go as far as 17,000,000 *l*. of notes without reference to the bullion, and not hazard the permanence of our specie payments, but I should not like to give a very decided opinion upon that point.

4902. Have you any reason for thinking that the present amount of the circulation of the Bank is insufficient for the wants of the country?—I think it has been quite as little as is desirable, but we are affected every week very much by the large arrivals of bullion, so that it may quickly increase very materially.

4903. Is there any alteration in the provisions of the Act of 1844 with respect to the limit upon the issues of the Bank, which you would recommend?—That is a very important question. I think that the Act of 1844 has very great merits, but I think it has great defects.

4904. What do you consider to be its defects?—I think it is defective in its want of provision against any withdrawal of the circulation from particular causes, such as panic and uncontrollable contingencies, such as a bad harvest or war,

war, and I will even add injurious or unjustifiable hoarding. I think that every one of those things should be provided against in the currency of this great kingdom.

4905. In what way do you think it would be possible to provide against those contingencies?—I think that, under certain fences and provisions, there ought to be a circulating medium provided beyond the possibility of doubt, to settle the affairs *de die in diem* of this country, although it must have some reference to bullion. I should take good care that we fenced it in such a way that we never ran away from our bullion; but, nevertheless, we should get rid of what we are exposed to at the present, namely, the withdrawal of our circulation from the causes which I have mentioned.

4906. Is it your meaning that some machinery should be provided for enlarging the paper circulation under certain circumstances?—It is.

4907. Would you give a greater discretion to the Bank than it has under the present Act?—I certainly would; but I think it ought to be done with caution. Speaking as I am in the presence of gentlemen who have filled the chair of the Bank, and I may say with such great satisfaction to the commercial public, I speak with great diffidence; but I certainly do think that it would be very desirable that the country should never be brought into a condition of paralysis for the want of a circulating medium under any circumstances.

4908. When you speak about the country being brought into a state of paralysis, do you refer to the year 1847?—I take that as an illustration of it, but we have passed through several periods of anxiety since that time; even last year the reserve in the hands of the Bank was so low as to cause us considerable anxiety in carrying on business.

4909. Since the year 1847 has there been any occasion on which you think that any benefit would have arisen from a larger issue of paper by the Bank?—I find that on the 23d of October last year, we had got down to a point at which the notes in the hands of the Bank were 2,550,740 *l.* When you consider that the money dealers, or the public, which is the same thing,—for we, in point of fact, are the public in one sense,—have occasion to apply to the Bank under such circumstances, remembering the liabilities which they are under to the bankers, who may withdraw their balances from them, and remembering that they have to supply their 10 branches, you can easily understand that we must all be living in very great anxiety indeed.

4910. Mr. *Gladstone.*] As you have said, "We must all be living in very great anxiety indeed," is the Committee to understand that the anxiety which you yourself have felt, is, in your opinion, felt by the money dealers generally?—I should say so, unless they are asleep; every intelligent man must be under anxiety of that kind.

4911. Are you able to say, as a matter of fact, that that anxiety is felt by the whole class?—There is not a question of it, and it is shown immediately by their doing all they can to check their business.

4912. Mr. *Hankey.*] Are you aware whether at that period to which you just referred, of 1856, our money-dealing houses in Lombard-street were large borrowers of the Bank?—I cannot say whether they were, but one thing is certain, that our rate of interest at that period was 6½ per cent.; we were driven to it; we should not be voluntary borrowers, excepting, as I have endeavoured to explain before, when it is natural that we should be so.

4913. Do you think that at that period your own house and others were large borrowers?—Without our books I should not be able to answer the question. But I am perfectly certain that we should feel it a very indelicate thing on our part to go to the Bank under such circumstances, unless driven to it by absolute necessity; we should not solicit business to drive us to the Bank under those circumstances.

4914. If at that period you were large borrowers of the Bank, it would have been a matter of absolute necessity?—There is no question of it.

4915. Mr. *Gladstone.*] Did your business undergo a material contraction?—I should say not. But I am bound to tell you, speaking as I ought to do, without reserve, that we certainly did carry on our business under the tacit understanding conveyed to us, that if any real press did come we should have relief. I say it without hesitation.

4916. Mr. *Hankey.*] Relief from where?—From the Government; there is no doubt about it.

4917. In 1856?—Yes.

4918. *Chairman.*] How did this tacit assurance reach you. I do not ask you to violate any confidence?—It came to me, not from any Member of Parliament, or any person in direct connexion with the Government; but still from a person of such standing that I could not misunderstand it, that it was desirable that we should go on with our business, and we did so.

4919. Mr. *Hankey.*] That was in October last?—For a great period of the year we were more or less in anxiety, but in October we were in a state of great anxiety, seeing that the Bank reserve had fallen from 3,500,000 *l.* to 2,500,000 *l.* in a week.

4920. Mr. *Weguelin.*] The understanding to which you have alluded was from no person connected with the Bank of England?—It was not.

4921. Mr. *Gladstone.*] You have given the Committee to understand that under circumstances such as you describe, a contraction of business by the money dealers takes place; do you mean a contraction of business over and above such as is the natural consequence of an increase in the rate of interest?—I think so; I think nobody would seek transactions under circumstances of that kind.

4922. Therefore, you do not trust simply and solely to raising your charge for discount, and letting everything else take its usual course; but over and above that, either negatively or positively, you take steps, the general effect of which, on the whole, is to contract?—Yes; it is extremely desirable to contract.

4923. *Chairman.*] The low state of the note reserve of the Banking Department was owing to the diminution of the bullion in the Bank, was it not?—Yes, the bullion had fallen considerably. On the 23d of October the bullion was 9,231,000 *l.*; on the 16th it was 9,589,000 *l.*; and the week before that it was 10,226,000 *l.*

4924. The note reserve is measured by the bullion in the Issue Department, is it not?—The note reserve has nothing to do with the bullion; it has to do with the Banking Department of the Bank.

4925. But it is dependent upon the quantity of bullion in the Issue Department, is it not?—No; there is a certain amount of notes. The amount of notes in circulation is governed by the bullion plus the 14,000,000 *l.*, and those notes are held by the public and by the Bank; the notes held by the Bank are governed by their banking circumstances.

4926. The note reserve is the difference between the total amount issued and the amount which the Bank is entitled to issue?—Yes.

4927. The note reserve is absolutely dependent upon the bullion in the Issue Department, is it not?—No, not notes reserved by the Bank; the total amount of notes issued is dependent upon the bullion; of course, it fluctuates with the bullion.

4928. Then the note reserve in the Bank is dependent upon the total amount of bullion and the quantity in the hands of the public?—It is so.

4929. Then you may say, in general terms, that the note reserve in the Banking Department is dependent upon the bullion in the Issue Department?—Yes, the notes actually in circulation being taken into account.

4930. If the bullion reserve of the Bank becomes low, is it not desirable that bill brokers, such as yourselves, should contract your operations?—We do it, naturally; we are too glad to do it, if we can.

4931. Did you not describe it as the effect of the small amount of the note reserve that it would lead to a contraction of operations on the part of bill brokers?—A reduction of the notes in the hands of the Bank, of course, always affects the money dealers. (We are not bill brokers.) We immediately argue thus: in case the demand upon us should exceed the supply, and we should have occasion to go to the Bank (which is what we should not covet), can we rely upon the Bank at all; and if we think we cannot, then the next step which we take is to check our discounts. We must do that gently so as not to create alarm, and reduce transactions as far as we can by charging an increased rate of interest.

4932. As soon as you see that the note reserve in the Banking Department is considerably reduced, that leads to a diminution of operations on the part of money dealers?—As far as they can do it.

4933. Do you think that that is a disadvantageous change?—I think it is a most

most desirable thing if it can be accomplished, but it cannot be done suddenly, engagements contracted three months previously having to be settled.

4934. If it is to be a gradual operation, the sooner that is begun the better, is it not?—I think so; we all agree to that.

4935. Then does not the present state of the law give a timely warning to money dealers?—I think not. I think that the Bank do not cease their competition for bills one moment earlier than they can help. They say, we have to make a profit for our proprietors, the same as any other concern, and we must have our bills; and it is not until they are driven to it, and they see their till sinking too fast, that they take those defensive measures.

4936. If the Bank did take warning in time, you think that that would be a wholesome operation?—Provided it was not too rapid.

4937. You do not object to the increase of the rate of discount or the corresponding operation, provided that the change is gradual and not rapid?—On the contrary, I think it would be highly desirable, and I think it is the only safety valve which we have. Whether it affects the profit of the Bank of England or not (to speak without reserve), I think that if we see that the tendency is to take the money out of the country to the foreigner, the only way which we have of preventing that, is by raising the rate of discount.

4938. You do not agree with those who say that legislation ought to be directed to keeping permanently a low rate of discount?—I do not; on the contrary, I would say, certainly, that when the bullion gets down to a given point, I should suggest that the rate of interest should never be below 5 *l.* per cent., and that if it falls still further, the rate of interest should rise in proportion. I see no other way of keeping the currency safe.

4939. Do you believe it to be within the power of legislation to keep either a low or a uniform rate of discount?—I do not. I think that the rate of discount must fluctuate according to the true value of money.

4940. Do you believe that it is more in the power of Parliament to keep a uniform rate of discount than it is to keep a uniform range of prices of commodities?—Certainly not.

4941. Is your house in the habit of keeping money on call?—We do.

4942. To a large extent?—To a very large extent.

4943. Will you have the kindness to explain to the Committee the nature of that transaction?—We receive, as other banking houses do, money on deposit, but at interest; our business is very much followed now by the joint stock banks, which, in point of fact, have taken up our business and followed it, almost entirely, adding to it, however, common banking business. Our business is that of receiving money on deposit, but allowing interest for it according to the market rate of the value of money.

4944. What is the rate which you are in the habit of allowing for money held in that manner?—It is entirely governed by the market rate, the general value of money in the market.

4945. You allow something less than the Bank rate of discount?—We do for money payable on demand, which may be taken at a moment's notice.

4946. Who are the persons who, for the most part, deposit money with you on those terms?—It is rather difficult to classify them, they are so numerous.

4947. Has that branch of business increased of late years?—It has always been carried on by us with the banking interests of the country; with private parties it has very much increased.

4948. The practice of holding money on call has very much increased?—Yes, with us; I do not know as to other houses.

4949. Do you believe that that has had any influence upon the value and currency of Exchequer bills?—I have no hesitation in saying that it has; that people who know they can have their money at a moment's notice without any fluctuation or being obliged to have recourse to sales, as with Exchequer bills, much prefer it where they know that they are safe.

4950. For that reason, do you think that the public will hold the same quantity of Exchequer bills now which they formerly would?—Certainly not; and for this reason, speaking from experience: when you come to a press for money, you cannot use Exchequer bills. Many a time people have been obliged to give enormous

D. B. Chapman, Esq.

21 July 1857.

enormous rates of money, even upon Exchequer bills, because they could not sell them; India bonds have been perfectly useless as a matter of sale.

4951. Do you think that the quantity of railway debentures has had any effect upon the value of Exchequer bills?—Very considerable.

4952. Do you deal at all in debentures and securities?—We have at times held a considerable amount of railway debentures.

4953. That is to say, you have advanced money upon deposits of railway debentures?—We have lent money to the railway companies at times upon their debentures; but nothing except our being excessively full of money would induce us to do it; I do not like it.

4954. You would lend money on railway debentures, and you would lend money on Government stock?—Yes; the field for the occupation of money is immensely increased, and that materially affects the question, as regards the commercial world. It is not only in debentures, but many wealthy people about the country who hold securities, such as London and North-Western stock, first-rate railway securities, will become borrowers upon those securities very largely; it affects the money market extremely; and it also affects Exchequer bills.

4955. Has your attention been at all turned to the division of the Bank of England into the two departments, the Issue Department and the Banking Department, which was introduced by the Act of 1844?—Of course I know it, generally speaking. The point which affects me is the Banking Department; the Issue Department speaks for itself. It is very ably managed by the Bank.

4956. Do you approve of, or object to, that division of departments?—I think the division is highly desirable.

4957. Would it be, in your opinion, desirable to supersede the country bank issues, to any extent, by Bank of England paper, beyond what is the case at present?—My own opinion is that it would be highly undesirable. I think the Bank have quite enough to do. I think that, looking at the amounts of notes which we have in the statement before me, it is quite enough for them to manage London in its issues. I do not think it would be at all desirable to put the country issues upon the Bank of England.

4958. The policy of the Act of 1844 seems to have been, by a voluntary process, to substitute Bank of England paper for country bank paper?—And it has so far abridged the circulating medium of the country.

4959. That would not necessarily be the effect of the change, would it?—I do not see why it should not. A country banker gives up his circulation of 100,000 *l.*, and takes Bank of England notes for it. He has to give the Bank of England some securities for that, and he withdraws the power of supplying his country customers with his money, which he used to do with his notes.

4960. Then you would not be in favour of effecting that substitution?—I certainly should not.

4961. Has your attention ever been turned to the paper circulation of Scotland and Ireland?—No; I am not sufficiently familiar with it to offer any opinion upon that point. The whole system of the banking affairs of Scotland differs entirely from that of England.

4962. Then your opinion with regard to the Act of 1844 seems to be, that there might be some guarded provision with respect to enlarging the paper circulation at moments of commercial crisis?—Most decidedly.

4963. But beyond that you would not think any change advisable?—No; that is my opinion. I think that that Act is of great advantage in putting the issue of the circulation upon a fixed principle; but I think it is defective in its want of protection against what I have alluded to, namely, against panics, against any uncontrollable withdrawal of the circulating medium arising from bad harvests, or against war. I have also no hesitation in saying that I do not think it is a proper condition of things that the money market should be under the power of any individual capitalist, such as does exist in London, to create a tremendous scarcity and pressure when we have a very low state of circulation out. That is possible, and I think that we ought to be guarded against it. There is more than one capitalist who can withdraw from the circulating medium 1,000,000 *l.* or 2,000,000 *l.* of notes, if they have an object to attain by it; and I say that that is not right. We all know that there are individual capitalists who can do that; there is no question of it.

4964. Mr. *Puller.*] Do you refer to the Bank of England when you use the term

term "a large capitalist"?—Certainly not; we should have no fear about the Bank of England doing anything of the kind.

4965. *Chairman.*] What inducement could any individual capitalist have to withdraw 1,000,000 *l.* of notes from circulation?—A great operator in the funds, unless he is governed by public feelings, which I believe is not considered desirable, may, if he chooses, sell 1,000,000 *l.* or 2,000,000 *l.* of consols, and take the money out of the consol market. We all know what effect that will cause by what has taken place within a very recent period, when a certain amount of stock was thrown upon the market under circumstances, when the circulating medium was suddenly withdrawn by taking the notes out of the market; it created a most violent pressure.

4966. Mr. *Gladstone.*] At what period was that?—A very short time ago; I need not go into dates.

4967. *Chairman.*] If any person were to sell stock to the extent of 1,000,000 *l.* or 2,000,000 *l.*, and to obtain Bank notes to that extent, with the view of withdrawing them from the currency, so long as he held them they would be unproductive, would they not?—Yes, but that is nothing if it effects his great object; his great object is to knock down the funds, to create a scarcity, and he has it perfectly in his power to do so. If you will allow me to illustrate the sudden withdrawal of notes, I can do so most effectually; what I am about to state occurred to me. In the morning there was a great demand for money in the Stock Exchange; nobody knew how it was; a person came and asked me whether I would lend money; I said, "Certainly." He said, "I will take 50,000 *l.* of you at 7 per cent." I was astonished; our rate of interest was much below that; I said, "You shall have it;" he came back for 50,000 *l.* more at 7½ per cent., he afterwards came back for 100,000 *l.* at 8 per cent., and again came back for some at 8½ per cent.; I said, "Sir, I am frightened, I do not know what this means." It afterwards turned out that there had been a sudden withdrawal of money from the market, which created this immense pressure; I did lend a large sum at 8 per cent.; I was afraid to go beyond; I did not know what was coming, but it is in the power of great capitalists to do that under a very low state of the circulating medium.

4968. Mr. *Gladstone.*] What was the period for which the money was required?—From one consol account to the other; I should think it was about two or three months ago; it was upon consols, upon the most current security which we have.

4969. *Chairman.*] You said that the Act of 1844 had great merits as well as some defects, in your view; what do you consider to be its principal advantages?—I think that it places the issue of the circulating medium upon a defined basis, which is extremely desirable; I think that there should be a line, and that any deviation from it should be the exception.

4970. Is what you approve of in the provisions of the Act, that there is a fixed sum to be issued upon securities, and that all the rest is to be issued against bullion?—I only address myself first of all to the issue upon bullion. The issuing upon securities is a matter with the Bank, who can only act according to the circumstances of their affairs at the moment; I do not see how you can regulate that.

4971. The provision of the Act of which you approve is that which regulates the issues of paper money by the Bank, by fixing a certain amount to be issued against securities, and the difference to be issued against bullion?—Yes.

4972. You consider the virtue of the Act to reside in that provision?—I do; I consider it a very good one.

4973. With regard to the division of the departments, you consider that subsidiary to the other principle?—That is an affair entirely for the Bank.

4974. An internal arrangement for those who have the management of the affairs of the Bank?—Yes; but I think that the Bank should be governed upon public principles, and not with a view to the private aggrandisement of a corporation. I think that we require the Bank to be upheld now more than ever. When we consider that in the immense and gigantic concerns which have risen up, there is such a power of accumulation, it is most desirable that we should have a public body such as the Bank not only supported, but also governed upon public principles, and not for the sake of private advantage.

4975. Mr. *Gladstone.*] Do you mean that in the conduct of its banking business, the Bank should be governed upon public principles?—I do indeed; I do

D. B. Chapman, Esq.

21 July 1857.

I do not care whether it is the Bank of England or any other institution of that sort, but I think that when we have a falling bullion we must have reference to the rate of interest in relation to it; that we must not run away, for the sake of the advantage of any institution, from our bullion, if we can help it.

4976. Without stopping to discuss that question in the abstract, would you say that, taking the law as it is, the Bank of England ought to be governed in the conduct of its strictly banking operations by public considerations, and not by considerations of profit like any other bank?—I should say so generally; but there are periods when it is not necessary for the Bank to consider that subject at all. If they have a very large till of notes, they have only to do whatever they think fit. But I say that long before there is any danger of drawing near the exhaustion of our bullion, the public should be warned by the Bank being obliged to adopt a high rate of interest, whether their till is full of notes or not.

4977. You think it very desirable that the warning which the commercial community are to receive through the measures of the Bank of England should be as early as possible?—I do.

4978. Do you think that it would be practicable to devise any legal provisions having a stronger tendency to produce that warning at an early period than the provisions of the Act of 1844?—I think it might be done.

4979. What would you suggest with a view to that particular object?—I would say that when the bullion of the Bank has fallen to a given sum, they ought to fix their rate of interest at a certain amount, whether they get discounts or not. If it falls still lower, they should be compelled to advance the rate of interest; and if it should fall still lower, they should be compelled again to raise the rate so as to show to the commercial world that we are spending too much money with the foreigner (because I must assume that that is the case), and it would at once prevent a great many operations, and contract our commercial affairs, because people cannot afford to trade at 7 and 8 per cent. A man says at once, "I cannot do business;" and long before we get to the condition of complete exhaustion, when we get, say to 5,000,000*l.* of bullion, let us suppose that those contractions of the bullion have made the rate of interest 10 per cent.; I need not tell you that under 10 per cent. it would be absurd to talk of Russian railways or Russian loans, or Sardinian loans, or anything having a tendency to take the money out of the country. A man would be a madman to attempt it; therefore long before we had that droop of bullion, by this increasing rate of interest, it would at once stop the tendency to take money out of the country; on the contrary, it would bring it back.

4980. Then is the Committee to understand that you would, to a certain extent, adopt legislative provisions which would require a given rate of interest, that matter being at present at the discretion of the Bank?—I think so. We must regulate it in some way or other; we must endeavour to maintain our specie payments, no doubt, and we cannot be spending our money as freely as ever, and have our specie payments too; we must put some check upon it.

4981. If you had provisions of that sort incorporated into the law, would they not be provisions which would operate after the bullion had fallen to a low point, rather than before it?—No; because they would equally arise the moment that we had a resuscitation of the bullion; that rate of interest would diminish, and we should be all right again; our coffers would be full.

4982. Do you think that it would be possible to construct a scale of that kind in such a manner, that it should give a warning to the public before there should come to be a pressure upon the bullion?—I think so, decidedly. This would be a matter of consideration; but I will assume for the moment, for example, in the rough, that the Bank bullion had sunk to 10,000,000*l.*, it would be then imperative on the Bank to say, "We have no right to let our bullion go out of the country." If the Bank rate were 4 per cent., it should then rise according to a fixed principle to 5 per cent., then if the bullion dropped to 9,500,000*l.* the Bank rate should go up to 5½ per cent.

4983. With the bullion at 10,000,000*l.* would it not be the rule of the Bank, under the law as it now is, to raise the rate of interest in the exercise of its own discretion?—I think it should not be left to its own discretion. I think it should be made imperative. We cannot do the two things; we cannot maintain a low rate of interest and maintain our bullion with an adverse exchange.

4984. You are disposed to trust rather to the positive provisions of the law than

than to the discretion of any body whatever; but the particular point to which I wish to call your attention is, whether you can make a system of that kind operate at periods before the bullion has fallen to a low point, inasmuch as when the bullion is at 10,000,000 *l.* we never find the bullion at that amount now without the Bank being, of its own motion, engaged in active efforts to check the drain?—I think you would hardly wish to control the Bank more than is absolutely necessary for the public safety.

4985. For example, do you think it would be possible or expedient, at periods when the bullion is at 15,000,000 *l.*, to affect the operations either of issue or the banking operations of the Bank, by means of a legislative scale such as you have described?—I think it would be very undesirable to do so, particularly when the Bank is so ably managed as it is at present.

4986. Mr. *Wilson.*] By what means would you propose to make this scale, if not by legislative enactment?—I would do so by legislative enactment.

4987. Do I rightly understand your plan to be this: supposing the bullion to be at 15,000,000 *l.*, and the Bank rate of discount at 4 per cent., would you then frame a scale whereby, when the bullion sank to a given amount, say to 13,000,000 *l.*, the rate of discount should be raised to 4½ per cent., and when the bullion sank to 11,000,000 *l.* it should be raised to 5 per cent.?—My observation was, that I would begin at 10,000,000 *l.*; I would not interfere with the Bank more than was absolutely necessary for the public safety.

4988. Then, if I understand it, what you would do would be this, that when the bullion in the Bank fell to 10,000,000 *l.*, you would make it compulsory upon the Bank of England to raise the rate of discount to 5½ or 6 per cent.?—I would say 5 per cent.; I would sound the alarm that there was danger ahead.

4989. If you are going to do it by regulation, you must fix beforehand what your rates are; you must apply the relative rate of discount to the minimum amount of bullion?—Yes.

4990. When the Bank bullion was at 10,000,000 *l.*, would you absolutely charge 5 per cent.?—Yes.

4991. And when it fell below 10,000,000 *l.*, for every 500,000 *l.* that it fell, the rate of discount should be raised a certain per-centage?—Yes.

4992. Suppose you did that, and fixed it at 5 per cent. for 10,000,000 *l.*, and by gradations came to 6 per cent. for 8,500,000 *l.*?—I should propose that the rate should rise a half per cent. with every 500,000 *l.* of fall.

4993. You know that when the exchanges are adverse, bullion goes out, there is a drain upon the Bank for bullion, and the principle which you lay down has been followed by the discretion of the Bank Directors, and is quite the right principle to follow, that under those circumstances the only mode, as you have said, of checking a drain is, by raising the rate of discount. Suppose you have got to 8,000,000 *l.* of bullion and you have raised the rate of discount up to 7 per cent., would you consider that when the exchanges had turned, and we had come to have a daily increase of bullion instead of a daily diminution as before, it would be imperative upon the Bank, or wise in the Bank to continue the same high rate of interest as if their bullion had been going down?—Most distinctly until they regained their 10,000,000 *l.*

4994. Supposing at 9,500,000 *l.* you had a rate of discount of 5½ per cent., with the 9,500,000 *l.* of bullion in the Bank, with an adverse exchange, and bullion going out, you would be able to maintain a very high rate of interest; but with the same amount of bullion in the Bank, with bullion coming in and with a favourable exchange, would the same rate of interest be maintained?—I think it would. The market rate of money is very sensibly affected by the Bank of England rate, and it would be a most extraordinary state of things, if the Bank of England were compelled to charge 5 per cent. if the money market generally did not harmonise with it, because you must remember that the very withdrawal of the bullion would of itself have originated the contraction of notes previously. As the bullion goes out it cancels so many notes, and that of itself has an effect upon the money market.

4995. Has it occurred to you that there is an objection to the plan of having a fixed rate of interest in relation to the amount of bullion, inasmuch as it would assume the same rate of interest when the bullion was the same, whether the bullion was diminishing, or whether the bullion was increasing?—I see no

D. B. Chapman, Esq.

21 July 1857.

objection to it. I think we are bound to signify in some manner to the commercial world that we are spending too much with the foreigner.

4996. By the increase of rate?—Yes.

4997. When there is an efflux of bullion?—Yes; it is a perfectly natural thing.

4998. But when there is an influx of bullion would you do the same?—Still you must go upon the principle that it rises up and diminishes the rate *de naturâ* without any interference at all.

4999. The management of the Bank of England for the last three years has been very much in accordance with this view which you have expressed, without any regulation?—Yes; but it makes a very great difference whether it is done upon a certain defined fixed principle, or whether we have the rate of interest subject to uncertainty; because we have had tremendous fluctuations in the rate; the suffering has been very considerable.

5000. Mr. *Gladstone.*] We have now been discussing your suggestion of a scale of rates of interest varying inversely with the amount of bullion, and we have been discussing it with reference to the expediency of giving warning to the commercial community, when a crisis is apparently coming into view. In a former part of your evidence, you likewise referred to a state of things which you called a state of paralysis, when the Bank reserve is very low, and when there is an apparent possibility of an absolute failure of the means of carrying on commercial transactions. Would you endeavour to arrange that scale of which we have been speaking in such a manner, as to admit of the relief which you think ought to be given by additional issues to the commercial community, under such a state of paralysis?—That is extremely difficult. I will answer that question by referring to facts. It is a very curious thing, that at the period I refer to, on the 23d of October 1856, the notes in the hands of the Bank amounted, as I have before observed, to 2,550,740*l.* I need not tell you how anxious everybody engaged in the money affairs of the country must then have been. At the same moment, the notes in actual circulation, which were held by the public, amounted to 21,155,000*l.*

5001. What was the amount of bullion?—£. 9,231,000.

5002. What was the Bank rate of discount?—The Bank rate of discount at that time was 6 per cent. for 60 day bills, and 7 per cent. for bills beyond 60 days, up to 90; they adopted that protection. Our rate of discount seems to have run at 7 and 6½ per cent.

5003. Will you be good enough to describe the provisions by which you think that any relief might be given to the commercial community under the circumstances of an approaching crisis?—I should say at once (I cannot speak for facts, but we will argue it according to circumstances), that a great proportion of this 21,000,000*l.*, this extraordinary sum beyond the natural level, was held by persons about the country who were making provision under the Act of 1844, who were alarmed, and were strengthening their reserves; there is no question of it. The amount of notes held by the public increased from 19,752,000*l.* up to 21,155,000*l.*

5004. Within what period was that increase of notes in the hands of the public?—Beginning with January the 3d, the amount of notes held by the public was 18,700,000*l.*, then 18,900,000*l.*, then 19,387,000*l.* It seems to me that in a general way, if there is no disturbing cause, the notes actually in circulation run somewhere about 19,000,000*l.* to 19,500,000*l.*, or 18,500,000*l.* to 19,500,000*l.*; but here we see them rise up in the hands of the public to 21,155,000*l.*

5005. Mr. *Weguelin.*] Are you aware that the circulation in the hands of the public at that particular period, namely, October, generally amounts to about 21,000,000*l.*?—This is a very large sum indeed; it is an immense amount, considering that the circulating medium has been extremely economised by the introduction of the joint stock banks, which, of course, have made all the difference.

5006. Mr. *Gladstone.*] Will you have the kindness to resume your explanation of the manner in which you would provide relief to the commercial community under periods of apprehended scarcity of the circulating medium?—The first thing which I think absolutely necessary for us is, to protect the maintenance of our specie payments; therefore, in order to do that, when the bullion sinks

to

to a certain point, I should say that it should be imperative to sound the alarm; and we ought not only to sound the alarm, but to provide that the contraction of our currency shall create a higher value for that which remains; that is the first thing which I should do. The next thing is this: I would certainly make a provision against any suffering from panic, or any disturbing cause which may arise from war or famine, which is beyond all possibility of control.

5007. Has it occurred to you to consider of any mode by which that provision might be safely made?—I think so.

5008. How do you think it could be done by law?—I think that though the Bank of England notes in reserve may have fallen to a certain amount below which the Bank hardly ought not to go as bankers, yet if they are applied to by the public for the supply of the commercial world upon undoubted bills, not only in point of security, but of a purely commercial character, such as the very first class bills, they ought to have power to discount them under any circumstances whatever; I think that provision should be made for that, and that then any idea of locking up money from panic would be perfectly laughed at, it would be absurd. The question of suffering from a high rate of interest would be another thing; those dealing in money would have to suffer that, but that the public should be in danger of a convulsion by the impossibility of discounting the acceptances of Messrs. Coutts & Co., the Treasury, Messrs. Jones Loyd, Messrs. Smith Payne, and the first concerns in the world, should be provided against.

5009. Will you point out to the Committee the specific mode in which you would make that provision; I understand you to think that the provision should be called into operation at periods when the banking reserve has fallen to a very low point, and when there is an apprehended scarcity of the circulating medium; how would you make the provision?—I would empower the Bank of England to extend their issues under certain circumstances, but not entirely for their own benefit; I would give them the power to extend the circulating medium at a given rate of interest, so as to make it difficult for the people to apply for it beyond what necessity should require; but for undoubted securities of a legitimate character the circulating medium should be always obtainable; but the benefit of any extra issue should be more for the Government than for the Bank.

5010. If I understand you rightly, then, you would do this: you would authorise issues under certain circumstances beyond the usual fixed amount of issue upon securities, and yet without requiring the condition that they should be against bullion?—I would.

5011. But you would at the same time check the abuse of the facilities thus offered by a very high rate of interest, and you would likewise, if I understand you rightly, remove all inducement on the part of the Bank to make such a system for its own particular benefit, by providing that the profit should be for the State?—Perfectly so, excepting to give the Bank a certain proportion of the profit for doing the business and for taking the risk. It is impossible to express it more clearly than you have done.

5012. Practically that would come to much the same thing in its effect, supposing it to succeed, as the effect produced by the letter of Lord John Russell and Sir Charles Wood in 1847?—Only with this difference, that the thing would never go on half so far; the pressure would never have arisen.

5013. You think that if it is possible that a relaxation of the law may become necessary, it is better that it should be provided for beforehand by distinct legislative enactment?—Most decidedly.

5014. Supposing that such a provision ought to be made, is it desirable that the occasion for making it should be determined by the criterion of a very low state of the reserve of the Bank of England, or would it be preferable to adopt for your criterion a very low state of the bullion in the Bank of England?—I should say that we had better have reference simply to the bullion of the Bank of England, because we have to maintain our specie payments; that is the first point which we all address our minds to. Nevertheless we should make provision in this way, that long before there was any danger of risk in the maintenance of our specie payments, the rate of interest would have risen under this system to a point which would check all commercial transactions exceedingly, and utterly annihilate any new transactions which had a tendency to take the money out of the country. When we get down to 5,000,000 *l.* we are at 10 per cent. Who is to trade at 10 per cent.?

D. B. Chapman, Esq.

21 July 1857.

5015. Mr. *Wilson.*] Is it not the case that when there is a severe pressure upon the Bank, under the circumstances which you have just named, it arises chiefly, as I think you have described, from a demand for bullion for foreign payments?—I should say so. We have had extraneous actions upon our bullion of late, not only from the course of trade, but also from the quantity which has gone abroad for war, and things of that sort.

5016. You have never known a pressure upon the money market which was not indicated by a very great reduction in the bullion of the Bank of England?—Certainly not; the effect of that reduction is to cancel the circulation *pro tanto.*

5017. You regard it, I think you have said, as a great point with those who take an intelligent view of those matters, that they should watch the efflux and influx of the bullion at the Bank?—Clearly.

5018. Supposing that at a time when the bullion is very low, you desire to introduce a relaxing power such as that which you have just described, if I understand you, at that moment it is not so much the circulating medium for internal purposes which is required, as a demand for bullion in consequence of an adverse exchange to send abroad?—I do not say that; the bullion would be in the Bank ready to be sent abroad, if a man could afford to send it abroad at the rate of interest which would then prevail, namely, 10 per cent., but the circulating medium of the country would still go on the same. I do not know the quantity of bullion which we have in the country; I do not know how to arrive at it.

5019. Nevertheless, there is a great pressure for bullion at such times as you have mentioned, for the purpose of being sent abroad?—No doubt it is that which has been the active cause, producing the contraction of the money market.

5020. You have mentioned the 23d of October of last year, when the notes in the hands of the Bank had fallen to a very low rate, I think 2,500,000 *l.*—Yes.

5021. What was the amount in the hands of the public at that time?—£. 21,150,000.

5022. Then it was unusually large?—It was; and the rate for money was unusually high, tremendously high, at the same time.

5023. The value of money was extremely high, while the notes in the hands of the public were unusually large?—That is precisely the fact; notwithstanding that we had 21,000,000 *l.* in the hands of the public, still the rate of interest ruled at 6½ per cent.

5024. But the bullion in the Bank was at a very low point?—The bullion in the Bank was 9,200,000 *l.*

5025. The bullion in the Bank was at about the lowest point, was it not?—No, it fell considerably after that.

5026. What was the lowest point?—On the 30th of November it fell to 8,914,000 *l.*

5027. That is under 300,000 *l.* less?—Yes; but that is important because it shows the continual tendency outwards.

5028. At that moment, therefore, it is obvious from that state of things there was a demand for bullion?—No doubt about it.

5029. And that the pressure was caused by a demand for bullion?—No doubt.

5030. You had at the same moment the lowest point of bullion with the highest amount of notes in the hands of the public?—Precisely.

5031. And the highest amount of discount in the year?—No; after that, on the 20th of November, the Bank raised its rate to 7 per cent., and we did the same.

5032. Still you had a much higher rate of interest than the ordinary rate?—Much higher.

5033. And much higher than it had been in the previous part of the year; it had been as low as 4 per cent. a few months before?—Yes. That 21,000,000 *l.* was not brought into active circulation even by the rate of interest.

5034. Do not those facts show that the great pressure upon the money market, which caused the increased rate of interest, was created by the demand for bullion to send abroad?—Clearly.

5035. You remember that at that time there was a great demand for bullion for the French market, and the continental market?—Certainly; to supply our China and India demands, we had to go to France for it.

5036. Do you suppose that if you had a relaxing power in the hands of the Bank to issue more notes at such a moment against securities, the effect of that

that would really be to increase the notes in the hands of the public?—I very much doubt whether they would be required.

5037. You think that the existence of the power would be sufficient to calm people's minds, and that they would not require its exercise?—No doubt about it; it is not very pleasant to pay such rates.

5038. The public at that moment were willing to pay 6 and 7 per cent. for advances of capital from the Bank of England?—For the advances of money.

5039. But those advances appear from the accounts to have resolved themselves into an abstraction of bullion?—No doubt it has been caused by an abstraction of bullion.

5040. The mode by which merchants and others obtain advances from the Bank of England is by the discount of bills, or by obtaining advances upon securities?—Precisely.

5041. If at such a moment the Bank of England were to afford facilities by discounting bills, or by making advances upon securities, no one would apply for those discounts or advances but those who required the money which the Bank held?—I should say not, at that rate of interest.

5042. Then it would not be for the purpose of getting notes, but for the purpose of getting bullion in exchange for the produce of those bills or securities, would it not?—I think not; the probability is, that the money then required would be for the settlement of old engagements; no person can trade anew upon 10 per cent.

5043. It was 6 and 7 per cent. at that time?—Yes; but I am assuming that the withdrawal of bullion went on, and that the Bank of England were allowed to issue notes; we assume that they would only issue notes under a very high rate of interest, considerably higher than that; therefore, if the money was wanted, I should say it would be wanted in the main for the settlement of previously contracted engagements which were falling due *de die in diem*, and not, generally speaking, for the purpose of foreign operations, which could hardly stand it; yet with the Bank of France giving certain premiums, we cannot say the extent to which those premiums might carry operations.

5044. You say that it is for the purpose of paying outstanding engagements; when we have an adverse exchange, does it not mean that those outstanding engagements are to foreigners in a larger proportion than our claims are upon them?—No doubt of it; that causes us to pay the difference in bullion.

5045. Then, when we see a diminishing amount of bullion, is not it an evidence that the outstanding engagements which have to be met are to a larger amount than usual to foreigners?—No doubt of it; and hence the necessity of contraction.

5046. At a moment like that, when the bullion is falling very low, that of itself is a sufficient evidence that, in the case of those who go to the Bank of England to obtain facilities by discounts or advances to pay outstanding engagements, a considerable portion of the money is required to pay foreign engagements?—It is difficult to put the question in that way, because the one section of the community knows nothing of the other; one is the manufacturer, for instance, who exports to the continent, or imports his raw commodity; he knows nothing of the man who deals in bullion.

5047. Every variety of person goes to the Bank of England?—Yes.

5048. Is there any other mode by which you can judge of the objects for which the demand exists, than by the decrease or increase of bullion, between domestic and foreign demand?—There is no question that the demand for bullion forms only a small section, so to speak, of the demand upon the Bank in its usual discounts; the people who usually discount with the Bank have no reference whatever to the bullion themselves.

5049. At the particular moment to which you have referred, the bullion was falling week by week?—Yes.

5050. Was not that a proof of itself that it was to meet foreign engagements?—No, it was not. The falling of that bullion may to a very great extent, I think, be accounted for by the extraordinary advantages which occurred in sending out bullion, to China in particular, and to India also. The state of those exchanges left extremely large profits; the consequence was, that these great banks through which many of these operations are conducted, found it quite worth their while to pay six or seven per cent., because they knew that

D. B. Chapman, Esq.

21 July 1857.

they could get immediately a great deal more if they could effect the discount of their bills, and get the money to send out to China.

5051. Is not that a foreign payment?—It was not an old engagement, but a new transaction.

5052. It is either sending bullion abroad for the purpose of making purchases, or for the payment of existing engagements?—No doubt of it.

5053. In either case, therefore, the diminution of the amount of bullion is a proof of demands abroad which cannot be satisfied by anything but bullion?—Clearly.

5054. Therefore when you see a demand on the Bank of England for discounts and advances, and at the same moment see a diminishing amount of bullion, you may take that as a sufficient proof that that demand is caused by foreign engagements, and not home engagements?—It may be so, but the fact is that we may have engagements which we cannot get out of. If we make a Russian loan whose instalments fall due over a long period, they must be paid, and the mistake is not to give timely warning to prevent those things. If we let money be at 4 and 3 per cent., and contractors for railroads, or whatever the things may be, are allowed to enter into those things with foreigners, they must be carried through; they must be paid for.

5055. But for making such payments the increase of notes would not be of any use whatever?—I do not know that it would. Where we want the notes is, to prevent the elements of panic, and also to provide against the accidental withdrawal of bullion for payment of corn, which I suppose is more important still than bullion under certain circumstances, if we should have a famine.

5056. The accidental payment for corn must be in bullion?—Yes; but if we have a famine we must have the corn; we must get through it as well as we can.

5057. You quite agree that there is no mode by which you can modify the demand for bullion, except by raising the rate of interest?—I should say so. I should say that when our bullion falls to a certain point, we had better sound the tocsin at once, and say, we are drooping, and every man sending money abroad must do it at his own peril. That is the first thing to be done.

5058. In your own case, and that of other intelligent dealers in money, the first thing they do is to see whether the bullion has increased or diminished?—Yes.

5059. If they see a diminishing bullion, they look out with great care?—The first step which we take is immediately to look out for our long bills; we say, interest must rise, and we charge a high rate upon our long bills, or will not take them.

5060. You not only look to the exact amount of bullion, but to the fact whether it is increasing or diminishing?—Decidedly.

5061. Because the fact whether it is increasing or diminishing is an indication of the balance of foreign payments being increasing against us, or diminishing against us?—Just so. We do not argue it quite so finely as that; we take it as we see it. If we see week after week a diminution, and that the notes in the Bank are, considering their liabilities, very low, we cannot divest ourselves from the immediate necessity of care, so far as we are concerned, to contract engagements. We should do so immediately, and the public too.

5062. You regard as much more important the amount of bullion in the hands of the Bank, than anything about the amount of notes in the hands of the public, do you not?—I will not say that; there may be times when the notes in the hands of the public, though they be very large, are not to be had.

5063. But as an indication of the proper state of the money market, as respects the supply of money, you regard the bullion as much more important than the notes which happen to be in the hands of the public?—If there is no disturbing cause, decidedly. If there is a large amount of notes for the general currency, it must be somewhere; it is either in the hands of the public or in the hands of the Bank; it is our business as dealers to find it out.

5064. Do you think that the Bank have any power to determine what amount of notes shall be in the hands of the public?—Certainly not.

5065. You think that the public act upon the Bank, and not the Bank upon the public?—The Bank could act upon the public by not discounting, but if so, it would create an immediate convulsion.

5066. But in the ordinary conduct of business the public act upon the Bank, and

and not the Bank upon the public, in determining what the amount of notes shall be in circulation?—This is a point which I am afraid to answer in the presence of those to whom alone it is known. We take for granted that the Bank will defend themselves, and if they have more discounts than they can manage it is perfectly clear that they must have their own means of fitting up their till again.

5067. You say that you would contract the currency by raising the rate of discount. Raising the rate of discount is simply increasing the price for the use of money?—Certainly, but it also signifies to the commercial world that we have a falling Exchequer, and that we must take care and not be spending so much money. As to talking about a foreign loan under those circumstances, when we saw the bullion decreasing half a million every week, which it would do by the scale of half per cent., a man would be a madman to think about it.

5068. Would not the raising of the rate of discount attract capital to this country, and prevent people from sending capital for foreign investment?—I am not so perfectly clear about that point; it may do so to a certain extent, but not to a very important one. I do not think capital is disturbed so very easily.

5069. You have very extensive foreign relations, have you not?—We have.

5070. Do you not find, that when securities are very low in this country there is a disposition for foreigners to invest in those securities?—Not at all. I presume that you are speaking of securities such as consols and our other stocks?

5071. Yes?—I should say not.

5072. Was not there such a disposition in the spring of 1848?—There might have been a speculative disposition, and there was an investment from Russia, I believe, but not as a general commercial matter. The foreigners have been discounters with us, and have not been taking securities from us.

5073. Because the rate of discount has been rather higher abroad than in England?—Yes.

5074. A large portion of the money available in the great mercantile houses will tend to find its way to that spot where the rate of discount is highest?—I should say not, excepting through the houses of the Jews who have connexions at different points of exchange on the continent, and who manage their business without expense, and who do it at a very small rate of profit; otherwise, generally speaking, it is not a commercial operation worth following.

5075. If the rate of discount were kept lower here than the natural price, and the proper price of money determined by supply and demand, and its value in the continental markets, would there not be a tendency for bills upon London to come here earlier and to be realised by discount in the London market, and the proceeds to be remitted in coin?—Decidedly.

5076. Then by that means the bankers upon the continent would anticipate at an earlier period their demands upon London?—They would discount their bills. It would act in this way: if a man at Hamburg could get 7½ per cent. for his money there, and could get money from us at 5½ per cent., which he can at the present moment, he would send over his bills at 5½ per cent., and draw upon his account against it, to use at 7½; he would carry that on as long as he could.

5077. Mr. *Weguelin.*] Are those bills upon Hamburg or upon London, which he would send over?—Hamburg upon London.

5078. But the rate of discount of 7½ per cent. in Hamburg is for bills due in Hamburg?—Precisely. He would not keep his English bills if he could convert them at 5½ while he could discount bills in Hamburg at 7½.

5079. Mr. *Wilson.*] What I understand you to mean is this: that if a banker in Hamburg had in his portfolio 100,000 *l.* worth of bills upon London at three months' date, and if money was worth 7½ per cent. in Hamburg, and he could get those bills discounted in London at 5½, instead of keeping those bills until he parted with them in the usual way of business, he would send them over to London and get them discounted, for the purpose of availing himself of the rate of discount in Hamburg with his money?—Yes.

5080. If the rate of discount in the London market were somewhat below the rate on the continent, the effect would be to drain this country prematurely of its capital?—It would, so long as they had bills to send of a commercial character.

5081. It would therefore tend to create a greater pressure upon the market here than if you in good time raised your rate here?—Yes.

D. B. Chapman, Esq.

21 July 1857.

5082. Therefore you would consider it a protection to the British manufacturer and merchant that you should raise your rate according to the continental fluctuations in good time, so as to prevent that abstraction of capital from this country?—I think it would be completely impossible for us to dress ourselves up to the rate in every town of the Continent. The practical working of it is, to defend ourselves if the stock of bullion is going out, by making it more difficult to obtain money.

5083. A demand from the Continent of that sort to which I have adverted would be immediately felt by a greater demand for discount in the London market?—Certainly.

5084. And it would likewise be seen by the bullion sent abroad as the produce of those bills?—Yes.

5085. Therefore if you take the demand for discounts and the state of bullion in the Bank of England, those, without looking abroad at all, are a sufficient indication to you of the course which you ought to follow?—Yes, that is all we look to. A man says, "If you charge me such a rate, it is not worth my while to send you the bills."

5086. Therefore it comes to this, that the supply and demand regulates itself from day to day, whatever the more remote causes may be?—Precisely.

5087. You stated, I think, that you were sometimes a little above the Bank of England rates, and sometimes a little below the Bank of England rates?—We are.

5088. Is it not the case that when the money market is very full, as it was in 1852 and 1853, when the rates were very low, you are rather below the Bank rate?—On the 1st of January 1852 the Bank rate was 2½ per cent., and ours was 2½; but they continued at 2½ till the 8th of April, whereas we dropped to 2¼ on the 15th of January, so that for two or three months we were below them; we dropped again on the 19th of February as low as 2 per cent.; we were then ½ per cent. below the Bank.

5089. It is at times when the money market is very full that you find the greatest difficulty in employing the whole of your means?—Of course.

5090. Therefore it is at a time when the rate of interest is very low that you are generally below the Bank?—Yes; on the 22d of April the Bank did not like the competition with us, and they dropped the rate to meet it; they made it 2 per cent., as we had been for about two months; then we were obliged to drop ours still lower, because we could not afford to be without the bills; we came down to 1 and 7-8ths per cent., and on the 27th of May we dropped still lower, viz., to 1¾.

5091. Will you state the amount of bullion in the Bank when you were at 1 and 7-8ths?—The amount of bullion in the Bank was 19,000,000 *l.*; the total amount of circulation was 33,000,000 *l.*

5092. Is it not equally the case that it is when there is a great demand for money, and a great scarcity, that you are obliged to be a little above the Bank?—Yes. When the supply in the market is not sufficient to meet the demands, it drives the money dealers to refit at the Bank; it cannot be otherwise.

5093. Then when the Bank of England goes very low, it rather follows the market than leads it?—Precisely.

5094. And when the rate of discount is very high, the Bank again rather follows the market than leads it?—Precisely; there must be harmony between the Bank and the public; if the Bank of England were very much above our market they would get no business.

5095. What little difference does exist between the open market and the Bank, is rather that when the Bank is very low the market is a little lower, and when the Bank is a very high the market is a little higher?—That is generally the case; we do not like to be above the Bank, because it takes our business away to the Bank.

5096. You would therefore only be above the Bank when you rather wished to contract business than otherwise?—Yes, when the demand for money exceeds the supply in the market.

5097. You have stated that the practice which has prevailed of late years of placing a great deal of money at call has very much increased?—Very much indeed with the joint stock banks; they have introduced a new system into the country of great importance.

5098. Is not there a very large business in money coming from the agricultural

tural districts when it is not required, and being supplied to the manufacturing districts through money dealers in London, such as yourselves?—Yes, that is a very large feature; as one character of money is dormant, the other is active.

5099. The country bankers in rural districts send up their unemployed balances to yourselves and other houses?—Yes.

5100. And, on the other hand, the Lancashire and Yorkshire districts require discounts from you for the use of their trade?—Yes, that is the nature of the banking business which we do.

5101. Then by that means the surplus money of one part of the country is made available for the demands of another part of the country?—Precisely so.

5102. The practice on the part of bankers of making short investments in certain kinds of securities, such as Consols and Exchequer bills, has very much diminished of late years, has it not?—We never do it; I only speak for ourselves; it would be very unpleasant to us to hold any fluctuating property whatever.

5103. Bankers used to do so?—I believe they did.

5104. That practice has been very much diminished, has it not?—I really do not know; but to hold anything of a fluctuating character with public money, to my taste would be very unpleasant.

5105. Was not it the case in former times, before this more convenient practice of placing money at call prevailed so much, that these securities were supposed to be fair banking securities?—I believe that a good many houses do hold those securities now; but, after all, there is not much pleasure in holding Exchequer bills. I should be extremely frightened to hold Exchequer bills for the liabilities which we are under. It may seem absurd, but nevertheless it is perfectly true; I could not sleep if that were the case.

5106. You prefer good commercial bills, which are falling due every day in certain proportions?—Certainly; I then know where we are, and no circumstance whatever, humanly speaking, could put us in any trouble.

5107. You know from your bill book the amount of money which you receive day by day from these bills falling due?—Yes; and I have no hesitation in saying, that in 1847 if we had held Exchequer bills we never could have made our payments, but as it was, we had not the slightest difficulty. We only applied to the Bank three times in 1847, I believe, out of the ordinary course, namely, on October the 19th, 20th, and 21st, for any discounts at all, and even then we should not have applied if we had not had a previous communication with the Bank, in which they said that in case of our wanting money, they would let us have anything which they possibly could. We had the pleasure of going on the 19th of October. They said, "You may have the money, but you must pay us 10 per cent. for it." That was our experience of the value of our bills of exchange, they carried us completely through everything; but if we had then had Exchequer bills the Bank could not have given us money upon Exchequer bills, and I could not have asked them to do so; and as to selling them, it was impossible.

5108. The best description of security which a banker can take is those securities which are falling due from day to day?—That is our experience.

5109. Do you remember the time when Exchequer bills were receivable for duties?—Yes, perfectly.

5110. Were they more saleable then?—I think they were certainly, because they became then a sort of bill of exchange in one sense; they are receivable under certain circumstances, and by a given day they have a very great advantage over India bonds.

5111. They would be like a Customs note?—There is always a certain degree of clog about them. I am speaking of difficult circumstances in the money market. People who had to make large payments into the Exchequer for duties would of course buy Exchequer bills, if at a discount, for that object, and to a certain degree it gives them an additional market value.

5112. Supposing that a man had to clear a large quantity of tea or wine or spirits, he could use Exchequer bills for that purpose?—If they were at a discount, not otherwise.

5113. Supposing he got them at a very small discount, a very small discount would be sufficient to induce him to take Exchequer bills rather than notes?—Supposing a man had to pay 1 *s.* per cent. to his broker for buying the Exchequer bills, and he then gets something for his trouble, it would not be worth while unless

D. B. Chapman, Esq.

21 July 1857.

unless he could buy them at 3 *s.* or 5 *s.* discount. No doubt that gave an additional security to Exchequer bills.

5114. It was always a security against any very considerable depreciation?—I should say it was, but after all, when you come to such a state of the market as in 1847, and at other periods, you cannot sell Exchequer Bills; and as to India bonds, you may just as well have so much blank paper. I do not mean to say that at a tremendous depreciation you might not find some persons willing to purchase them, but in the ordinary course of things you could not depend upon them for the realisation of a large amount of Bank notes.

5115. At such a time you would much rather have bills of exchange?—Most decidedly; I know where we are then.

5116. Supposing that you are about to employ your money at such a time, you would rather employ it in bills of exchange with two months to run?—Decidedly; let us have nothing fluctuating upon any account.

5117. You state that the field for the employment of money has very much increased?—Immensely increased.

5118. The channels of demand for it are very much more numerous?—Very much more; very many wealthy people about the country have become borrowers of money upon undoubted security.

5119. Do you think that much of the railway stock is still floating with loans upon it?—No doubt about it. I do not know the extent, but nevertheless there are advantages offered in connexion with it, and no doubt many of the country bankers about the country have lent large sums of money upon it, and perfectly securely.

5120. It is perfectly secure so long as there is a proper margin, and the money is not required for other purposes?—That is their affair; you may lend money upon London and North Western Stock with 20 per cent. margin; it is a very good security.

5121. Are you of opinion that the capital which has been used to make railways still consists of some considerable portion of borrowed money?—Certainly; there is no doubt that a considerable amount of railway debentures is held by the banking interest.

5122. Do you think that there is any great abstraction of capital from this country for foreign railways and undertakings?—Yes, considerable.

5123. That again is rather a new source of pressure upon the capital?—No doubt about it.

5124. There has been a very great increase of foreign trade within the last three or four years?—An immense increase.

5125. That again has led to a great demand for capital from the manufacturing districts, has it not?—No doubt the capital required by the manufacturing districts for the conduct of their own concerns is very much augmented.

5126. When there is an increase of foreign trade, is it not the case that consignments of British manufactures abroad are generally represented by bills drawn by the manufacturers upon the shippers at considerable dates?—Yes.

5127. Is it not frequently the case that an understanding exists that those bills are to be redrawn from time to time?—That is a thing which they keep from us; we should not admit any bill of that sort; we should be alarmed if we thought that any bill was founded upon that principle; we should discard it at once; I dare say it is done, but I cannot speak to a thing of the kind.

5128. It would not be done avowedly?—No.

5129. If there is a large increase of the exports of the country, as there was last year, of 20,000,000 *l.* in one year, will not that naturally lead to a great demand for capital for the discount of bills representing those exports?—No doubt.

5130. Inasmuch as this country gives credit, as a general rule, to foreign countries for all exports, it would be an absorption of a corresponding increase of capital for the time being?—This country gives an immense credit; but then it takes credit for its raw material. We are drawn upon from America always at 60 days, and from other parts at 90 days. On the other hand we give credit; if we send goods to Germany we give two or three months.

5131. With regard to the importation of raw materials and produce, are not the bills drawn upon this country generally at the time of shipment from abroad, and do not they even accompany the bills of lading?—I suppose that is the case.

There

There are others present who can answer that better than I can, in their mercantile character.

5132. The exports to Germany are done upon nearly the same principle, are they not?—I suppose so. Then the same thing takes place with America. When a man sends a bill of lading away, I presume (this does not fall within my particular line of business) that he draws upon the party for the amount which he has ordered, simultaneously with the transmission of the bill of lading. In the same manner, from America, if they send us sugar or cotton, or whatever it is, upon shipping it to us they draw upon us.

5133. Do you happen to know whether it is customary to draw upon the United States for the goods sent out there?—No, it is not; that is managed in an entirely different way; but the goods are symbolised *in transitu* nevertheless. Those bills are not drawn direct upon America; they are drawn upon the great American bankers here at four months, and are remitted for by their houses abroad to meet those engagements; so that it is putting it in a different shape.

5134. The shipper of goods here for America draws upon a great American house in this country for them?—Yes.

5135. And the correspondent who has ordered those goods must place the American house here in funds by the time that bill becomes due?—Yes; that is, as I understand, the course of the American trade.

5136. As a general rule, are not the more remote transactions conducted by the merchant, who waits for his capital until the goods are sold?—There may be houses of great private wealth who can afford to lay out their own capital, and not take any advance upon the goods; but the most part are converted into advances by the acceptances of some well-known established houses, whose acceptances the parties making the advances are willing to take.

5137. Those houses are generally resident here?—Yes; either in London or Liverpool, or elsewhere, wherever they may be.

5138. Therefore, it makes no difference whether the manufacturer lies out of his money, or whether he gets a merchant in London or Liverpool to advance it; it is still an advance in this country?—Precisely. The manufacturer in few cases has anything to do with it. A man dealing in manufactured goods, for instance, at Manchester, will buy his goods and ship them through a house of respectability in London; when the London house is satisfied that they are all packed according to the understanding, he draws upon this London house for six months against these goods to India or China, or wherever they are going; then the banking world comes in and discounts that bill for him; so that, by the time he has to pay for those goods, he has the money all ready by the discount of that bill.

5139. Although he has the money, the banker is lying out of the money?—The banker has the bill; the banker has bought the bill; he uses his banking capital in that form, namely, in discounting commercial bills.

5140. Still that forms part of the demand upon the money market in London?—No doubt; it is the substantial occupation of the money market and of the Bank of England. The Bank of England are as glad to get these bills as we are, because they know them to be good property.

5141. In that way, as the export trade increases the demand upon the money market increases also?—As the prosperity of the country increases, we partake of it.

5142. Then when these various fields for the employment of capital increase suddenly, of course the natural consequence is, that the rate of interest is higher?—No doubt about it. As there is a demand for money to meet the increasing engagements (last year to the extent of 20,000,000*l.*), money gets scarcer, and we charge a higher rate for the use of it.

5143. Are you of opinion that the great prosperity of the country for the last two or three years, and the great development of these various fields for the employment of capital, is one of the chief causes of the high rate of interest which we have had prevailing during that time?—There can be no doubt about it; it is a very strong element, perhaps the main element. There is one thing which is very extraordinary, and which I cannot quite understand, namely, that under our large exports we have had such occasion for bullion. One would think that our great exports would have supplied all our foreign exigencies, but, somehow or other, it appears that the bullion has gone out, notwithstanding.

5144. May it not be, that we give larger credits upon our exports than we take

D. B. Chapman, Esq.

21 July 1857.

take credits upon our imports?—I rather doubt that point myself. If a man accepts against his Manchester goods sent to India, you cannot accept for less than 10 months. We have had to pay America for her cotton (that is perfectly true) some time before India pays us; but still it is rather refined in its operation.

5145. If we have had an increase, as we had last year, of 20,000,000 *l.* in our exports of manufactures, we must have had a very large increase of imports of raw material previously to that, in order to make up that increased quantity of goods?—No doubt.

5146. And all that increased quantity of raw material has been paid for by this country before the goods are exported, or, at all events, before the payment is received for the goods?—No doubt; we should have to pay a very considerable balance, that is to say, the balance, no doubt, would run against us during that time, but in the long run, with America (for I will assume that to be the great supplier of cotton) the exchanges are in our favour, and we have been receiving for some time past large supplies of bullion from America, notwithstanding that, which shows that the balance is on our side.

5147. But though the balance may be on our side, which only shows that we send more to America than we receive from America, at the same time, may it not be, as far as regards the employment of capital, that we are paid for our goods long before we receive payment for them?—That is perfectly true; but then it shows that we can afford to do it by their having to pay us money on balance.

5148. Then, upon the whole, you would be of opinion, that a high rate of interest for a considerable period of time (I do not mean a temporary high rate, caused by pressure or panic) would be an indication of great prosperity and high profits, rather than the reverse?—It cannot exist without great prosperity, for what man can afford to pay these high rates of interest, except he has a trade which yields great profit? It is because his trade is so profitable, that he can afford to pay this high interest. There are some who cannot help themselves; they have engagements to meet, and they must fulfil them, whether it is profitable or not; but for a continuance, it would indicate prosperity.

5149. You would make a great distinction between a short period of pressure as we had at the end of 1847, when the rate of discount ranged from 6 to 8 per cent., for two or three months, and the last two or three years, when it has been raised?—Certainly; the one was accidental, and soon passed away. It was a very curious circumstance, in 1847, after the Government letter came out, how very soon things resumed their natural equilibrium of supply and demand in the money-market. Within two days after that letter came out, I went myself to the Bank, and begged as a great favour that the Bank would let us have every bill that we had sent in to them within the three previous days. They said at once that they would be very glad to do it, if they could, but that it would give a good deal of trouble. They saw that I was very anxious about it; they said, "You do not like the rate of interest" (the Bank reduced it from 10 to 9 per cent.) "No," I said, "I never paid that in my life; I should be very sorry to pay it now, and should be very glad to have the bills back." I mention that circumstance to show you, that as soon as that panic was over, everything came as natural as possible, and there was more money presented to us than we could use; we should only have been too glad to have had those bills back again. We should have been thankful for them, at a considerable loss.

5150. I think you stated that you did not know anything about the Scotch and Irish banks in their mode of conducting their business at home?—I think that their occupation of money is so entirely different, that I do not think any opinion which I could possibly offer would be of the least value.

5151. In the money market in London, have not the Scotch banks always stood in high reputation?—Yes; they have sent their superfluous money to London and other places, not having occupation for it at home.

5152. From your recollection, for many years they have always stood in very high reputation for credit?—They have.

5153. You have regarded the Scotch banks as being very substantial establishments, and in very high credit?—Very much so, with only very few instances to the contrary; we have never had to regard them but as sending superfluous money; the question of their credit has not come under notice.

5154. They

5154. They have always had a great effect upon the money market?—Yes; I think so. They are great holders of the public funds.

5155. *Chairman.*] Mr. Hubbard, in his evidence before this Committee, put in a statement with respect to the discounts of the Bank of England, and he made this remark upon it, in answer to Question 2759: "It exhibits in a very remarkable manner how fallacious is the idea which has been popularly entertained, that the restriction of banking accommodation to the public by the Bank of England, is tantamount to, or concurrent with, a rise in the rate of interest. The public generally appear to have reversed the position of the action of the Bank. It has been the increased demand upon the Bank for discounts, which by raising the value of money, both out of the Bank and in the Bank, has forced the Bank to make larger advances; and you will find that concurrently with the rise in the rate of discounts, there appears always a considerable increase in the advances made to the commercial community, and *vice versâ* with a falling rate of discount." Then he is asked this question: "So that when the rate of discount is lowest, the amount of the Bank advances is smallest?" He says, "Yes."—That is true.

5156. With regard to your own concerns, do you find that when the rate of interest is the highest, the quantity of bills under discount is the largest; and that when the rate of discount is the lowest, your advances are the smallest?—It would be extremely difficult to answer that question. The fact is that I should say that our discounts, taking the present moment, when we have had for so long a high rate of interest, are at their maximum, that is, under a very high rate of interest. I cannot answer what our discounts were at the time to which I have referred; we did not then keep them; but we do now keep them tabularly, so that I know them accurately; when our discounts were down to 1⅞ per cent., I cannot say what they were.

5157. Mr. *Hankey.*] Do you not know whether your discounts were larger in 1852 than they were in 1856?—I should say they were not nearly so large.

5158. *Chairman.*] Do you find a great fluctuation in the amount of bills offered for discount?—I think we keep pretty equal.

5159. Still, so far as your present impressions go, you would say, that when the rate of discount is high your advances on bills are larger than when the rate of discount is low?—I do not think there is any real criterion in that; there is no question of this, that if there was a great flood of money in the market, which would be indicated by the Bank rate being so low, we should get a decrease of bills, and the probability is, that under an extraordinary increase of business throughout the country, we should be much larger in our operations than we are now. In 1852 there was a totally different phase of things. The exports and imports of the country were as nothing then compared to the present; but if the same amount of business had been doing in 1852, when money was so low, as has been doing this year, no doubt our discounts would have been greatly increased, and for this particular reason, that we should have been obliged to cut under the Bank.

5160. Mr. *Weguelin.*] Do you find that the average amount of discount is about the same in all years, whether at a high rate of discount or at a low rate of discount?—No; I should say that you cannot state that; I think we are affected a good deal by the general position of the country; the discounts in 1857 run parallel with 1854.

5161. That is to say, the commercial community in one year require larger advances in the shape of discount than in another year?—I can only speak out of our own book; I cannot say as to that; I can only say that the figures of our returns show that under this high rate of discount, our discounts are as large as hey were in 1854.

5162. Mr. *Hankey.*] I understood you to state that, as a general rule, you approve of the Act of 1844, as regulating on a fixed principle the currency of this country?—I do.

5163. But at the same time I also understood you to say, that you would allow the infringement of that Act under any one of the following four circumstances, namely, panic, sudden drain on account of bad harvests, war, or unjustifiable hoarding?—Yes.

5164. And the nature of that infringement would be, that you would require

D. B. Chapman, Esq.

21 July 1857.

at that time that the Bank should make additional advances, but at fixed increased rates of discount?—Yes.

5165. Am I to infer that those advances might be to an unlimited extent, at the discretion of the Bank?—Yes, always assuming that the rate has risen up to a point which would check all speculative transactions and exports of bullion.

5166. I understood you also to say, that you would regulate that by an Act of Parliament?—I would give that power to the Bank, under certain fences.

5167. But under an Act of Parliament, you would so modify the Act of 1844, that in making a new Act you would have a scale under which the Bank might, under particular circumstances, make increased advances?—I would.

5168. Having given to the Bank that power, would you also regulate by the same Act the mode in which they should return to what I might call their normal state?—I would; but fencing it as to the rate of interest, so as to preclude the possibility of any danger to our bullion.

5169. Do you think it would be possible, by an Act of Parliament, to make stipulations contingent on four events which might occur, two, three, or four together, or any one of them singly?—I should leave that in the discretion of the Bank of England; I say this, that the present Act is defective in its want of provision against those things, and it is impossible for any person to say how those things shall take place. All we know is, that at the present moment we are liable to be brought into a state of convulsion through panic; I will take that in the first instance. Everybody acquainted with our commercial circle must know that when we are in such a state that we find it impossible to sell Exchequer Bills, when India Bonds are perfectly useless, when you cannot discount the first commercial bills, there must be great anxiety on the part of those whose business renders them liable to pay the circulating medium of the realm on demand, which is the case with all bankers. Then the effect of that is to make every man double his reserve. Just see what the result of that is throughout the country, that every country banker, of whom there are about 500, has to send up to his London correspondent to remit him 5,000*l.* in Bank notes. Taking such a limited sum as that as the average, which is quite absurd, you come to 2,500,000*l.* taken out of the circulation. How is that to be supplied?

5170. Am I to understand that you would wish in framing such an Act of Parliament to leave it entirely in the discretion of the Bank to determine whether panic had occurred, whether a sudden drain on account of a bad harvest had occurred, whether war had occurred (which certainly would be very manifest), or whether unjustifiable hoarding had occurred. All those four events with the single exception of war, perhaps (which might be very manifest), would be questions which might involve considerable difficulty in their determination, and would require great discretion; would you leave in that Act of Parliament an entire discretion on the part of the Bank as to whether those causes had arisen, and whether the time had arrived to act accordingly?—My answer to that is, that discretion must rest somewhere, and whether it rests in the breast of the Bank Directors, or in the Government, or in the two concurrently, is unimportant to me, provided we have that safety-valve to our system.

5171. Then you would have it rest either in the Bank of England, or in the Government by Act of Parliament?—I would decidedly.

5172. And would you prescribe by Act of Parliament, not only when these increased issues should take place, but when they should begin to diminish?—No, perhaps that might be undesirable. The framing of an Act is not within my province. In laying before you my mind, it was incumbent upon me to show you under what circumstances we must make provision; but the framing of an Act is so foreign to me that I cannot offer an opinion upon it.

5173. However, you think that the Act of Parliament ought to define when these increased issues should take place, and consequently it must define when they are to stop?—Suppose we put it in a general way, such as this: Forasmuch as certain circumstances may arise to cause great pressure and confusion in our monetary system (which everybody must confess to be highly artificial), therefore we make such and such provision. What is our system? Our system is this: That we have 300,000,000 *l.* of liabilities which may be called for at a single moment to be paid in the coin of the realm, and that coin of the realm, if the whole of it is substituted, amounts to 23,000,000 *l.*, or whatever it may be; is not that a state which may throw us into convulsions at any moment?

5174. Mr. *M. T. Smith.*] Am I to understand you to say that you would not object

object to the Act of 1844, but that you would allow it to be mechanical when things were easy and prosperous, and discretionary when they were difficult and uncertain?—I think I have stated that long before there can be any danger of our jeopardising our bullion and our specie payments, it should be obligatory upon the Bank to raise the rate of interest to a certain sum, which should be matter of consideration. If the bullion still decreased, they should still be obliged to raise their rate of discount till it reached 10 per cent., and even then we should have 5,000,000*l.* in the Bank; but the public would know that under any possible circumstances they would have a circulating medium to settle their affairs, and the money never would be required.

5175. That is all against the principle of the mechanical part laid down in the Act, namely, the issue of paper against gold?—With regard to my approving of the mechanical part, I answer in the abstract, that the grand principle of the Act of 1844, which makes the issue of the circulating medium rest upon certain defined principles, I greatly approve of; the mechanical part I did not enter into at all.

5176. Mr. *Hankey.*] I also understood you to say that you considered it very defective that there should be a state of affairs possible to arise by which acceptances of such houses as Messrs. Baring or Messrs. Loyd should not be discountable at the Bank?—Yes; or Exchequer bills unsaleable.

5177. Do you mean by that that you think that they ought to be discountable on compulsion, in the same way that a Bank of England note is now exchangeable against gold by compulsion?—I think it would be a very lamentable thing that they should not be discountable; a most extraordinary position, that a man should stop payment who had the acceptances of Smith, Payne, or Jones Loyd in his hands, because he could not get them discounted.

5178. Is not the engagement of Messrs. Baring an engagement to pay a certain sum of money when the bill is due?—That is perfectly true; but Messrs. Baring, when they contract that engagement, and every other merchant who contracts an engagement, never dream that they are going to pay it in sovereigns; they expect that they are going to pay it at the clearing-house.

5179. Still they make no provision for paying it, otherwise than at the time when it is due?—Undoubtedly.

5180. Do you think that there should be any machinery contrived by which the public would have a right to claim money before that bill was due by calling upon somebody to discount it?—No, not from the acceptor; but if you mean by that that we are not to have the possibility of getting commercial bills discounted, we must alter the whole constitution of things. If a man is to stop payment when his case is filled with hundreds of thousands of pounds of the finest bills in the world, because they are not due till the following day, we must indeed begin upon a new principle.

5181. I am not talking of the probability of a man stopping payment, but as to the expediency of making a bill of exchange discountable by compulsion?—It forms part of the commercial assets of the country, and should be convertible the same as an Exchequer bill.

5182. Then you think that it ought to be convertible into money, exactly in the same way that a Bank of England note ought to be convertible into money?—Most decidedly so, under certain circumstances.

5183. Those circumstances being entirely at the option of the person who holds it?—I say that we should make provision in our currency that the commercial business of the country should be maintained, which cannot be done if people cannot discount bills of exchange.

5184. Then you think that the provisions of the currency should be so shaped that a bill of exchange of undoubted character ought at all times to be as readily exchangeable against money as a Bank note?—I do.

5185. Mr. *Puller.*] You do not mean to say that either the Bank of England or any individual should, by law, be compelled to exchange it?—I mean to say this, that in framing a bill for the currency, we should make provision to prevent the possibility of an inconvertibility of the bills of exchange of the country arising, assuming them to be undoubtedly solid and legitimate.

5186. But you would meet that by providing that there should be such a supply of money that there should be no difficulty in negotiating them?—Precisely.

5187. You would not compel the Bank to take any particular bill, or any

D. B. Chapman, Esq.

21 July 1857.

individual capitalist to take any particular bill?—Certainly not; they must use their own discretion; but at any rate, a man who has the first class of bills of the country should have no difficulty in converting them, or even Exchequer bills, because the Government are as much interested in this matter as we are.

5188. Mr. *Hankey*.] I think that all the provisions were confined to the understanding that the Bank rate was the regulating rate of the interest of the money in the country; but as the other establishments have larger amounts, would not the larger amounts have a great weight, at all events, in regulating the rate of interest in the country?—There is no doubt that they have; as I have stated, each acts upon the other.

5189. When the Bank rates are below the market rates, do not the money-dealing houses in Lombard-street depend upon being able to re-discount the bills which they discount by applying to the Bank of England?—You may say that they, in one sense, depend upon it; they know that there is a *point d'appui*, and hence they are never very far off from the Bank rate, unless there be a flood of money. A man does not fall very far from the Bank of England rate on account of that very circumstance which you have mentioned, namely, that in case he is driven to convert at the Bank, he converts at a loss.

5190. If at any period shortly subsequent to such employment of money, as discounting bills by the discount houses in Lombard-street, the Bank were to be placed in a position as to their reserve that they could no longer discount these bills for the Lombard-street houses, would you think that a time when an infringement of the Act of 1844 ought to take place?—I have no hesitation in saying, that assuming that those bills were all representing the true commerce of the country, and all of undoubted security, it ought to take place, because the money-dealers of the country only, in point of fact, represent the public; they are only the medium by which the facilities in the banking world are managed. If the money dealers did not come to the Bank, the public would have to come direct. I have seen very many instances of it, where a money dealer has not held the bills, and the Bank have thought it expedient to discount them for the persons direct. But inasmuch as it is infinitely better done through the money dealer, who has all the sympathies of the market with him, and if there is 10,000 *l.* in Lombard-street he can find it, and bring it forth as long as there is no panic, it is a relief to all parties to do it quietly through the money dealer.

5191. Do you think that if at any time the Lombard-street money-dealing houses have such an accumulation of bills of exchange on their hands as to feel themselves in a position of pressure, they have a right, or ought to have a right, to come upon the Bank of England; no matter what is the state of the reserve of the Bank of England at that period?—I consider that every person of proper delicacy would abstain from doing so; but the effect would be this: the money dealers would not be in a position to be hurt by it, but the public would be hurt by it; a money dealer, if his affairs were in proper order, would soon rectify himself, assuming that there was no malicious feeling on the part of the Bank, which it is difficult to imagine. For instance, give us two or three days and we will never ask the Bank for a shilling; but then the Bank must discount for the public, and, in consequence, the Bank would have to discount to an immense amount. Suppose we stopped our discounts, the increase of discounts at the Bank would be quite frightful.

5192. Then you think that the Bank of England could not stop discounting for the discount houses in Lombard-street, at particular times at least, without creating great injury to the commercial community?—I think it would create very great injury indeed. Of course the Bank Directors would use their own discretion; if they saw these houses discounting very long bills with them, and bills which were not suitable in any way, I take for granted they would not take them. Of course that would not affect the general question; but assuming that there is a drain upon the monetary system, and that the great money dealers are driven to convert their bills more quickly than they fall due, I think it would be a very great calamity for the Bank to hesitate for a single moment; I cannot conceive any greater.

5193. No matter what the reserve of the Bank of England was at the time?—Certainly.

5194. Then you think that that is one of the grounds, in addition to those four which you have stated, which ought properly to be included in an Act of Parliament as a ground for infringing the Act?—I hardly understand that point.

5195. You

5195. You gave four grounds as reasons for an alteration of the Act at particular periods, but you did not enumerate that to which I have just alluded. Do you think that that is one which ought to be included in the provisions of the Act of Parliament?—I will mention a case, if you will allow me to refer to the house which I represent, because this is a fact which has taken place before. About 20 years ago, the Bank tried to adopt that course; I am obliged to speak personally, which I hope you will excuse. I happened to have been absent from London for three or four weeks; I came back to town, and found the whole of Lombard-street as if we had had a dark cloud hanging over it; our desk was piled with bills of the very finest commercial character; I said to my partner, "Mr. Gurney, what in the world has happened? Why do you not discount these bills?" He said, "Because the Bank have intimated that they are doubtful whether they will discount for us." I said, "It is impossible." He said, "It is perfectly true; and therefore we will not discount the bills." I was quite shocked; I went over to the Bank, the Governor then was Sir John Rae Reid, and Sir Henry Pelly was the Deputy Governor; it was about 1839. I told them exactly what had taken place, and what the effect of their act had been. I said, "We have taken care of ourselves; it is not that we want the money for ourselves, because we have our bills to rely on, and unless there is a regular conspiracy, we shall not mind anybody. But we have to supply the public. You have stopped the issue of notes to us; and if you, who have been in the habit of supplying us with money when we required it will not do so now, we, on the other hand, will not supply the public." I satisfied them that if they wished to curtail transactions, which was really their object, the way to do it was to make us act harmoniously with the Bank. Sir John Rae Reid said at once, "I perfectly understood you;" and after a little consultation he said, "If they are all proper bills go and discount away, and if you want money come to us." I went home, and told them what had taken place. It not only affected us, but it affected the whole of Lombard-street; this dark cloud disappeared, and a perfect sunshine took place in an instant. We discounted every thing; and, as far as my memory serves me, I do not think we went to the Bank for a shilling; there was no interruption to the ebb and flow of the banking money. But when the Bank of England said, "You shall not have it," the effect was to lock up millions immediately; for a large portion of the banking money deposited with us is in great masses, because the parties know that they can have it in a moment. If, in our own arrangements between ourselves and the Bank, the Bank say, "We will not do this," all that is stopped in a moment; and those millions, which would otherwise be of benefit to the public, under existing circumstances become immediately locked up; because people say, "We would rather have no interest at all, than have a doubt about our getting the money in case we require it."

5196. Leaving out the question relating to your own house, do you think that it is prudent for a house carrying on such a business as a discount house in Lombard-street, so to manage their business that they will be obliged, under certain circumstances, to go and discount their bills at the Bank of England?—I should say most decidedly not; that it ought to be the exception and not the rule. I think you may see by our transactions how we manage our business in that respect. During the quarters, I think it is not only natural, but absolutely necessary, that we should go to the Bank of England. When you abstract from the circulation 6,000,000 *l.* or 7,000,000 *l.* of revenue in anticipation of the dividends, somebody must be the medium of supplying that in the intermediate time; but otherwise I should not like to carry on our business through the Bank of England. I would not thank anybody for any profit which we might ever obtain from it.

5197. I think you have said that the best security which a banker can hold are bills of exchange?—Most decidedly.

5198. Are not large advances made by the Lombard-street houses on securities other than bills of exchange?—I should say not; it is the exception, and not the rule.

5199. Do you not, of your own knowlege, know that large advances are made on the security of dock warrants?—Certainly, advances to a certain extent; but as far as my knowledge goes it is upon warrants either sold or in the course of sale, and not by any means to encourage a speculative transaction.

D. B. Chapman, Esq.

21 July 1857.

5200. Has it not been frequently the case that very large advances, to your own knowledge, have been made by discount houses in Lombard-street on the security of dock warrants pledged by various houses in Mincing-lane?—Very likely they run up to a certain amount; but no man would advance more than a very limited amount upon those securities. Nevertheless, when the advance is made in a proper form, there is no objection to it, assuming that it will expire in two months.

5201. Do you think that it is a safe mode of placing out money lent at call to make advances on dock warrants or on railroad securities?—No, I should not use such money for that purpose; but that is no reason why a house should not use its own capital.

5202. My question referred to placing money borrowed on call?—I should certainly not do it; I should never use any securities of the sort for such a purpose.

5203. Then you think it is not a prudent thing for a discount house to employ money borrowed and held at call by making advances on dock warrants, or any such security?—That is merely a question of practical experience; it is the same thing whether a man or the Bank of England lends money upon debentures of railroads, or whatever it may be; it depends, to a certain degree, upon their circumstances. All I know is, that I should never lend money to encourage a speculative transaction, upon any consideration. But if a merchant came to me, saying, "I have sold 20,000*l.* or 30,000*l.* worth of indigo in yesterday's sale, to be paid for in three months; will you lend me the money in the meantime?" I should say, "Certainly;" and consider it a perfectly legitimate transaction.

5204. Are not the large speculations which are carried on in the colonial markets carried on by the assistance of the discount houses in Lombard-street?—Certainly not; we should never lend ourselves to it.

5205. They are not carried on, or assisted, to any great extent, to your knowledge, by the houses in Lombard-street?—Certainly not; not anything of a speculative character whatever.

5206. You are aware, as you have referred to the habits of banking business, that it is the habit of the Bank of England, as well as, I believe, of other bankers, to keep a certain amount of their deposits in Bank notes in reserve?—Certainly.

5207. Do the money-dealing houses in Lombard-street act on the same principle with regard to that money which is left in their hands at call?—They could not afford to do it; it is not the nature of their business, except under circumstances of danger as to the currency; they could not afford to pay interest for money and not to use it; it is the nature of their business to bring into action and useful employment the banking money of the country; it is their business to use it.

5208. Do you then think that they may safely use all the money which they borrow, in lending it out at interest, provided it is on safe security?—Assuming that they employ it on bills of exchange falling due *de die in diem*, then experience shows that they may do it safely, without any hazard.

5209. Without keeping any reserve beyond a banking balance?—Certainly. How could I afford to pay 5 or 6 per cent. for money, if I did not use it? It would be certainly the road to ruin. It is a different thing with a banker who pays no interest.

5210. I understood you to say that the business carried on by your house, and other houses in Lombard-street, is of the same nature as that carried on by the great London joint stock banks, with the exception of their carrying on, as combined with it, the common banking business?—The joint stock banks have decidedly run into our business, and they have added to it the common banking business.

5211. Is it within your experience that the great London joint stock banks, such as the London and Westminster, and other banks, re-discount their bills?—I never heard of such a thing.

5212. But it is usual with the discount houses to do so?—Yes.

5213. Did you ever see a bill out, in Lombard-street, with the endorsement of the London and Westminster Bank?—Certainly not.

5214. Or of the London Joint Stock Bank?—Certainly not.

5215. Or of any one of the principal banks of that character, in London?—I should say, of none of those banks.

5216. Then

5216. Then, in that respect, the London joint stock banks differ materially in their mode of carrying on business from that which is adopted by the discount houses in Lombard-street, do they not?—Certainly they do; because it is our business to sell our bills again, if we want to do it, and they do not sell their bills again, that I know of.

D. B. Chapman, Esq.

21 July 1857.

Veneris, 24° die Julii, 1857.

MEMBERS PRESENT.

Mr. Ball.	Mr. John Lewis Ricardo.
Sir Francis Baring.	Mr. Martin Tucker Smith.
Mr. Cayley.	Mr. Spooner.
Mr. Ennis.	The Chancellor of the Exchequer.
Earl of Gifford.	Mr. Tite.
Mr. Glyn.	Mr. Vance.
Mr. Hankey.	Mr. Weguelin.
Mr. Hildyard.	Mr. Wilson.
Mr. Puller.	

THE RIGHT HON. THE CHANCELLOR OF THE EXCHEQUER, IN THE CHAIR.

David Barclay Chapman, Esq., called in; and further Examined.

5217. Mr. *Spooner.*] YOU perfectly well recollect the state of affairs in October 1847?—Perfectly.

D. B. Chapman, Esq.

24 July 1857.

5218. Will you inform the Committee what, in your opinion, it was which led to that state of affairs?—There had been, in the early part of the year, a very great contraction of our currency from the loss of our bullion; we had a bad harvest, and in the early part of the year we began to feel it sensibly; we had a great pressure in April of that year, and afterwards it recurred with increased violence in October; therefore, the primary cause of the derangement of the money market no doubt was in the quantity of money which was required to regulate our exchanges, in consequence of the extraordinary importations of the year.

5219. What was the effect upon the inland commerce and trade of the country of the necessity under which the Bank was to restrict its issues, in order to prevent bullion going out?—The effect certainly was to make the fulfilment of engagements difficult, and to create a great many failures. We had more failures in 1847 than I think were ever known.

5220. What would have been the effect if the Letter of 1847 had not been issued?—We should then have got into a complete fix; there is no question of it.

5221. Do you mean that all commercial transactions would have been at an end?—I mean to say that the clearing-house could not have been settled.

5222. What would have been the case in the country?—One universal convulsion.

5223. Nobody would have been able to have met his engagements, and nobody would have been able to have employed the labouring classes?—Clearly so, unless we had adopted another mode, namely, barter. If we had each of us agreed to pay with bills of exchange, how far that might have settled it I cannot say.

5224. Do you think that, under the existing law, a very great drain of bullion, either by the importation of corn or by the necessity of carrying on war, would be likely to produce the same effect?—I think most decidedly it would, if it went to such an extent as to reduce our currency below what is absolutely necessary for the settlement of affairs from day to day.

5225. What amount of Bank notes do you look upon as being necessary to enable the country to carry on its own internal engagements?—I think at least from 18,500,000 *l.* to 19,000,000 *l.* is absolutely necessary to be in the hands of the public, according to experience.

D. B. Chapman, Esq.

24 July 1857.

5226. And in order to maintain that amount in the hands of the public, what should be the minimum amount of reserve in the Bank of England?—That is a very difficult question. I can tell you what affects our own minds, that unless there be a large floating amount in the hands of the public easily come at, if the Bank of England goes below 4,000,000 *l.* or 5,000,000 *l.* it makes us look about us very sharply.

5227. In October 1847, if I remember rightly, the notes held in reserve by the Bank were under 2,000,000 *l.*, were they not?—On the 4th of November it appears that there was only 1,176,000 *l.* in reserve.

5228. And you think it very likely that such an event may happen again, if any very great drain for bullion takes place in this country from any cause?—I cannot see how it can be obviated. There is a given amount of notes, and they are held either by the public or by the Bank. If the public hold them the Bank do not, and *vice versâ*.

5229. Could you suggest any plan by which you think that such a crisis might be prevented?—I see no plan beyond the power of extending our issues, as I have before observed, under such special circumstances.

5230. Under those circumstances, you would give to the Bank a discretionary power of increasing its notes, notwithstanding the Act of 1844?—A power should exist somewhere to give relief under such circumstances, and also to prevent the consequences of a panic; it is that which we suffer most from.

5231. Had you not a conversation upon this subject with the late Sir Robert Peel during the passing of the Act of 1844?—I had a very important conversation with him twice or three times.

5232. Will you state what that conversation was?—I felt it my duty, in the position which I held in the money circle, to explain to him the danger, as I thought, of the Bill which was then proposed to be brought forward. I represented to him the extraordinary amount of obligations in the country liable to be paid on demand in the currency of the realm, consisting of bankers' balances in the first instance, and also of bills of exchange maturing from day to day. I then showed to him that these must be settled from day to day at the clearing-house, according to custom, with the circulating medium then existing; and if the circulating medium from any cause of disturbance were reduced to a very small sum, I satisfied his mind, as I believe, of the great difficulty, if not impossibility, of thus settling those matters. Sir Robert, after the first interview, desired me to see him again, which I did, and at last he said to me these words: "Mr. Chapman, there is always recourse to the Queen in Council;" upon which I immediately bowed to Sir Robert. I said, "I do not occupy your time a moment longer; I am perfectly satisfied;" and the interview ended. He afterwards wrote me a note, in the April following, saying how glad he was to see that the crisis had passed through, notwithstanding the pressure which had existed.

5233. That was in the April of 1848?—In the April of 1847.

5234. Then it was before the great crisis in October 1847, of course?—It was.

5235. Did he write you a similar congratulatory note after that?—He did not.

5236. Your opinion is that that should not be left merely to an Order in Council, but that there should be some power constituted which should be enabled at once to take measures to prevent such a serious crisis?—I think that power ought to rest somewhere to give relief; and if you will consider for one moment the highly artificial state of our monetary system, which no reflective mind, I think, can deny, it commends itself almost without an argument. Referring to this statement of the Bank, where is the money to come from? There are certain conditions of the money market (and the present is not very far from it) where money is exceedingly difficult, and recourse must be had to the Bank. It may be difficult in consequence of the extraordinary accumulations at the Bank at this moment: I cannot say that it is from that cause, but from certain circumstances, whatever they may be, it is extremely difficult, and therefore the monied interest must get supplies from the Bank; if therefore the Bank should not have the money, what is to be done?

5237. What proportion do you think of the demand upon the Bank in 1847 was occasioned by the want of confidence through the country generally in their being able to obtain Bank notes? What proportion did the drain arising from that want of confidence bear to the positive demand upon the Bank arising from the

the drain of gold?—There is no doubt that a very considerable proportion arose from that cause, but what proportion it would be perfectly beyond me to say.

5238. I am speaking of October 1847; you can speak practically upon that point, that numbers of persons applied to you, not merely for notes for their immediate demand, but from a fear of their not being able to get those notes a few days later if they postponed their demand?—I have no doubt that a very large sum of money indeed was withdrawn from our house for those purposes; but we take no notice of the purpose for which it is drawn; it is enough that the parties say, "We demand it."

5239. If there had existed a power upon which the public could have relied that the crisis would not have been brought to that point, do you think that the demand which took place upon the Bank would have taken place?—Certainly not; the question is best answered, perhaps, by the fact, that with reference to the sums which we took from the Bank on the Friday, Saturday, and Monday, the 19th, 20th, and 22d of October (I think I am correct in the dates), we should only have been too thankful to have got the bills back on the Wednesday following; the money reflowed to us directly the panic was over.

5240. Did you or your partner make any and what application to the Bank a few hours before the Government Letter of 1847 came out?—We did.

5241. Have you any objections to state what it was, and what the result was?—I should almost wish to embody in this answer what really took place with the Bank altogether at that time.

The Witness was directed to withdraw.

The Witness was again called in.

5242. I think you stated that you wished to make some addition to the answer which you had made to my question; do you wish to make any explanation or addition?—As you have asked me to relate what took place between our house and the Bank, if I stated one part without the other I think it would be incomplete.

5243. Mr. *Glyn.*] In the course of your answer to a question put to you in your previous examination, No. 5107, you stated, "We only applied to the Bank three times in 1847," and so forth; do you want to add anything in explanation of that answer?—Not at all; I am perfectly satisfied with it.

5244. Mr. *Weguelin.*] Do you wish to make any remark on the conduct of the Bank at that crisis; what do you think should have been the conduct of the Bank upon that occasion?—I think that the Bank did everything they possibly could have been expected to do, or even more than they could have been expected to do. Now, I must refer to what took place. On either the 5th or the 6th of October, I cannot say which day now, but I believe it was the 5th, we had managed our affairs, having taken a decided view as to the probable working of this Act, in such a way that, notwithstanding the great pressure in the earlier part of the season, I believe we never had been near the Bank. Whether we had been there during the quarters when the revenue goes in or not, I am not so positive; but on the 5th of October I did go to the Bank, and I told the Bank that notwithstanding the extraordinary pressure for money which existed out of doors, we were exceedingly full of money; that we had a very large sum indeed wholly unoccupied, which we should be only too glad to bring into the general good, if we could have an understanding with the Bank. The answer which I received from the Governor and the Deputy Governor was this: "By all means bring it forward, and any money that we can give you you shall have, in case of your requiring it, but we cannot make notes." Those were the exact words. Upon that we pursued our business, discounting very considerably indeed, besides meeting all the drafts upon us from various parts of the country from day to day, till we arrived at the 19th of October. Then it was that we tried the Bank for the first time, and the answer is before you in my previous evidence. As regards the conduct of the Bank, therefore, I can only say that they had it not in their power, as the answer which was given to me shows, to give more than a certain assistance to the public. That assistance, as far as I know, they gave even beyond their power. No institution could have been managed better.

5245. Do you think that the rate of interest which they demanded for that

D. B. Chapman, Esq.

24 July 1857.

accommodation was such as was consistent with the position of the Bank's reserve at the time?—No; I always thought that that was a most usurious transaction. When you ask me plainly, I am bound to speak plainly; I am aware that it is in accordance with what is enacted in the Act of 1844, but after having encouraged us to discount freely, to bring forward that large sum of money at that time, I thought it a most hard case when we sent in 80,000 *l.* of very short bills to be told, "We will exact from you 10 per cent."

5246. Mr. *Cayley*.] In reference to the rate of interest, did you not state on the last occasion that the repeal of the usury laws made a good deal of difference in relation to the rate of interest under pressure?—I am not aware that I answered in that form.

5247. There was a great pressure in the year 1825, was there not?—There was a very great pressure indeed.

5248. You were then limited by law to the rate of 5 per cent.?—We were.

5249. When did that pressure take place in 1825?—As far as my memory serves me, though it is rather a long time back, I think it was as the winter drew on. I have no statistical report of my own here, therefore I speak vaguely.

5250. It was in November and December?—I think it was.

5251. Will you be good enough to turn to the table which you delivered in, on the last occasion, of the rates of discount for first-class bills at various periods; will you turn to the months of November and December 1825, and mention the rate paid for first-class bills?—In November and December we were at 4½ per cent. in both months.

5252. The usury laws did not prevent your charging a higher rate than that, did they?—No; it does not appear by this return that we charged excessively, whatever others may have done. Unfortunately, here we are at fault as regards the Bank rate; I do not know whether the Bank rate was not uniformly then 5 per cent.

5253. Are you not now speaking of your own rates of discount?—Our own rates were 4½.

5254. And you are speaking throughout this table of your own rates for first-class bills?—Precisely.

5255. Will you be kind enough to turn to the months of October and November 1847; what were the rates of interest then?—The interest in October 1847 was 7 per cent., and towards November it was 10 per cent. I should say that this has been overstated by the clerk who took this out. We fell very rapidly after the Letter came out. There might have been some transactions higher, but in December we were at 6 per cent., which tallies with my ideas.

5256. Mr. *Glyn*.] Are we to understand that in December 1825 your house only charged 4½ per cent. discount?—I have it here as taken out by one of our confidential clerks, and I just take it according to what he has stated to me; I have no doubt he is correct.

5257. Was there any commission added to the interest?—I cannot say that.

5258. Do you not think it possible that there might have been?—It is not impossible. My impression is that the Bank then had one uniform rate of 5 per cent., and long after that period; but I am not certain about that.

5259. If you recollect the state of the money market at that time, it was under circumstances of extreme pressure?—It was.

5260. Quite as great as the pressure in 1847?—It was.

5261. Do you think that your house discounted at 4½ per cent. under those circumstances?—I think myself that, as the business was transacted up to that time or thereabouts, we were acting as brokers. We charged a commission upon our transactions; it is therefore very possible that our common rate was 4½, and that we charged a commission of one-eighth per cent. for transacting the business.

5262. One-eighth, or it might be more?—I do not think it was more.

5263. When you compared the two periods, would it not have been fair to have added in the estimate of what was charged in 1825 the amount of brokerage also charged in addition to the interest?—Clearly so, if the clerk had seen it, if it be the fact, but I will not say it is the fact; he has no object in mis-stating it, that is perfectly clear.

5264. Do you think it possible that your house, dealing as largely as they do in money, could have discounted for the mercantile body under the current rate of interest at that time, it being 5 per cent.?—That is a very interesting thing

to ask me, and for me to consider how it should be. Having the confidence which I have in the man who took this out, I cannot believe that he has made a mistake. He has drawn it up in this way: in January the rate is stated as 3½ per cent., and that continues till June, when we went to 4 per cent.; that continues up to November, when it went to 4½ per cent. It does not seem unnatural.

5265. Mr. *Cayley.*] Was it your practice to charge commission when your rate was below the legal rate?—When I first came to the business, and for several years afterwards, we charged the Bank rate, and one-eighth per cent. commission; the Bank rate was a uniform rate, and did not fluctuate for several years afterwards; it generally stood at five per cent., and we charged a commission for transacting the business.

5266. Did you always then charge the same rate?—Yes, one uniform rate of five per cent., for several years after I came to the business.

5267. When the system altered with you, and you charged under the legal rate, did you then charge a commission; suppose, for instance, you charged four per cent.?—No; our business assumed a totally different character; we departed from the business of brokers to the business of dealers; we dealt, according to the true value of money, with the public. It is a very rare thing indeed that we charge a commission; it must be a very exceptional case.

5268. Supposing the rate of money fell to three per cent., would you then think it necessary to charge a commission as well as the three per cent.?—Certainly not.

5269. It was only when the price rose to the legal rate that, in order to get more, in proportion to the value of money, and not being able to get it according to the legal rate of interest, you charged a commission?—Yes; in fact, we gave and took.

5270. Then, if the rate in December 1825 had not risen to the legal rate, it being only 4½ per cent., according to you, it was not likely that you would charge a commission?—I should say not. If you wish to have that information furnished, I shall be glad to supply it.

5271. You have spoken of the number of acceptances out?—Yes.

5272. Have you any notion what the amount of acceptances out is at any one time in London?—This is a point of very great public interest, and I have endeavoured to bring my mind to bear upon it as well as I could; I do not feel at all confident that I am near the result; nevertheless, I differ extremely from what Mr. Leathem some years ago put forth. Mr. Leathem, in a pamphlet with which you are perhaps acquainted, has estimated the bills of exchange current at any one period at 200,000,000*l.*; I believe I am correct.

5273. Mr. *Hildyard.*] Of what period was Mr. Leathem speaking?—It was a good many years ago, 1825; I do not believe that it is anything like it.

5274. Mr. *Cayley.*] Then what do you think is the amount of acceptances out?—My impression is, that if we rate the bills of exchange floating at from 100,000,000*l.* to 120,000,000*l.*, we get much nearer the mark.

5275. Mr. *Puller.*] At the present time?—Yes; but I should be very glad to be acquainted with Mr. Glyn's opinion upon the subject. I derive it in this way: I say to myself, "How much is the average?" (because they all settle themselves at the clearing-house). "What amount of bills of exchange is settled *de die in diem* on the average at the clearing-house?" If you multiply it by about 40 to 45, you will find the true amount of bills in circulation.

5276. Mr. *Cayley.*] Have you any idea what is the amount settled at the clearing-house day by day?—They differ materially; you must take the average. On the fourth of the month they are very considerably larger than on any other day.

5277. Do you suppose that they ever reach 20,000,000*l.* in a day?—Nothing like it.

5278. Mr. *Glyn.*] I dare say you are aware that there are other periods in the month besides the 4th and the 5th, which are days of great payments?—There are.

5279. There are the settling days on the Stock Exchange, and the settling days on the Foreign Stock Exchange, which come twice a month, the Foreign Stock Exchange, and once a month the other?—Yes.

5280. Therefore there are other days which raise the average very high?—Yes;

D. B. Chapman, Esq.

24 July 1857.

Yes; but we were confining our remarks to bills of exchange. The amount would be easily arrived at if the bankers, if it were thought desirable, would simply take the trouble to keep an account, for two or three months, of the quantity of bills which they have at the clearing-house a-day. My opinion is that 200,000,000 *l.* greatly exceeds the amount of bills current.

5281. Are you right when you say that you think you could make an accurate calculation in the way you have mentioned. Is not there a very large amount of local bills paid at the different towns?—I except those.

5282. Are you aware of the amount?—No.

5283. Taking Liverpool and Manchester, are not they enormously large?—I know that they are very considerably large, but I cannot say what they are; it does not fall within my province.

5284. Mr. *Cayley.*] Supposing that there are 120,000,000 *l.* or 130,000,000 *l.*, to that has to be added the amount of deposits with bankers, and various other immediate demands all liable for prompt payment, when there comes a scarcity of the circulating medium?—Certainly; everybody is exposed to be called upon.

5285. The banker is called upon to pay his deposits?—Certainly.

5286. The merchant is called upon to liquidate his bills of exchange; the country banker and the Bank of England are called upon to pay their notes; and does not that afford, in your opinion, a very reasonable ground for apprehension of panic in the public under a state of drain?—I think quite a reasonable ground; I do not see how it can be otherwise.

5287. You stated that 19,500,000 *l.* is about the average circulation with the public?—Casting my eye over this book, since the joint stock banks have been admitted into the clearing-houses, it seems to have run up to 19,000,000 *l.*, or somewhere thereabouts, but sometimes it has been more. I should like to make an observation in reference to the answer which I made on the last day, touching the amount in October 1856, when the amount in the hands of the public increased exceedingly, to 21,000,000 *l.* I was answered most properly by a reference to previous years, wherein there was a considerable increase; but there was this distinction in the thing, that whereas in last October this amount in the hands of the public ran up to 21,155,000 *l.*, there was an extraordinary difficulty in obtaining money; notwithstanding that the public held so much, we could not touch it, and our rates were very high, and not only so, but after the affair of the Eastern Bank had passed away, very large sums of money in masses came into our hands; I will not say came back, because that would identify the transaction, but I mean to say that, from some cause or other, whether a natural cause or not, the circulating medium was so restricted at that season that it left the Bank of England with a very small sum of notes for their engagements, and in the meantime, on this last occasion in October, we were unable to obtain money in the market without great difficulty indeed to keep the public going.

5288. Do you trace that to any particular cause?—In my own mind I set it down to the anxiety which had arisen in certain concerns, in consequence of what had happened to the Eastern Bank.

5289. Mr. *Wilson.*] That was in March?—I was referring to March; I beg your pardon; I was giving the wrong date; it was the same thing, an increase took place; suffice it to say, that very large amounts came pouring back to us after the public mind had been satisfied that the Eastern Bank had got what we call carried over.

5290. Mr. *Cayley.*] Does not that always happen when a panic of any kind or pressure, or apprehension is over; does not the money seem miraculously to come tumbling into your till almost unaccountably?—It does; not unaccountably, but most reasonably, because all bankers deriving their profit from interest begin to employ the money immediately.

5291. As soon as they become perfectly content that the panic is not going to turn against themselves?—Clearly.

5292. The larger houses, I presume, the bankers and the rich merchants hoard the circulating medium, and that creates a scarcity?—I presume they do; it is merely natural that they should; I should hardly think that the merchants would; I do not know what their habits are.

5293. When there is a state of danger, those persons who can protect themselves, take care to do it?—No doubt they do; it would be very wrong if they did not.

5294. Supposing the public were assured that there never would be less than 20,000,000 *l.*

20,000,000 *l.* of Bank notes, do you believe that a panic would so readily arise?—I think with reference to that, that any limited sum is calculated to create a panic; if you say that there is a limited sum which everybody is to draw upon, he has to run for it as hard as he can to meet the demands which may arise upon him; any fixed amount is undesirable in my humble judgment.

5295. If the public were assured that the Bank could always issue as much as 20,000,000 *l.*, I do not say more, if they were convinced that the circulation in the hands of the public never would be lower than 20,000,000 *l.*, do you believe that a panic would arise?—I think if that were done, unless it were fenced about with extraordinary fences, we should very soon see the business of the country extending itself up to the point of requiring the 20,000,000 *l.*; and we should not be protected by the simple enlargement of the amount, unless we also adopted other regulations as to keeping that money in hand.

5296. You are not a broker?—No.

5297. But a dealer in money?—Yes.

5298. Is not that a banker?—Our business lies in the employment of the loose banking money of the country; we receive it at one rate, we employ it at another in those securities which, in our opinion, are the most current going.

5299. That is to say, you have deposits yourselves, and you employ the deposits which other bankers loan to you?—Yes; keeping them in such a shape that they have never yet been disappointed, and I hope never will, of receiving them when they call upon us.

5300. In what light do you consider deposits?—As being payable on demand.

5301. Do you consider them as part of the circulation?—Certainly; can any man doubt that a thing which a man can draw out of my hands at a moment's notice is part of the circulation? I must keep myself in preparation and readiness to pay him.

5302. The other day you described the degree of alarm upon the part of the public, at seeing the reserve of the Bank diminish gradually; to what do you attribute that alarm?—Because all those who are responsible to pay large sums of money on demand, know very well that they may be driven to the Bank in case of a tightness in the market. For instance, suppose there is a large amount of money out in the hands of the public, and the public are alarmed, and will not bring it forward, what must be done? We must go to the Bank. If we find that the Bank have a very small reserve, they are not glad to receive us; but on the contrary. We therefore become anxious, and manage our business under an anxious mind, to do as little as we can; that pervades the whole monetary system, or ought to pervade the whole monetary system all alike.

5303. It has been stated to this Committee, that the anxiety felt upon those occasions, and very much the cause of the panic, is, that depositors who have deposited their money with the Bank are afraid that they will not be repaid by the Bank; what is your opinion upon that point?—I cannot believe that that feeling has ever obtained, although I have seen most extraordinary instances of alarm; people have been almost afraid of their own shadows. When fear once takes possession of the public they become foolish. I remember an instance perfectly well of a man with whom we had deposited India bonds; he brought the India bonds in one of those panics and said, "Sir, what is the use of such stuff as this; give me my money." I gave him his money, and begged him never to come to the house again; but that was the effect of the panic.

5304. Did not you state yourself that very much the same effect was produced upon Exchequer bills and India bonds in 1847?—Not from any want of confidence in them. This was not a money dealer, but a private individual.

5305. In the panic of 1847, if you wanted to raise money upon Exchequer bills or India bonds, what was their value?—You could not do it. We had a particular instance happen to us of that sort; but I had better not enter into our private affairs.

5306. You stated this morning, in answer to a question, that if things had gone on as they were in 1847, we should have been obliged to resort to a state of barter; was it not the fact that bills of exchange were exchanged for bills of exchange, instead of cash?—I do not remember a single instance of the kind in our house. When I say this I should like to qualify that answer, if I have made it in that way, about a state of barter, because that is a very serious thing. I was asked the question what would have been the consequence if that letter

had not been issued. I should have answered with deliberation that we should have called a grave council of the members of our house, and I will not venture to say what our house would have done; but my own private mind is this. that if such a thing ever should happen (which God forbid!) as that there should not be currency to settle the transactions at the clearing-house, the only next alternative which I can see is to meet together, and to make our payments in first-class bills, bills upon the Treasury, and Messrs. Smith, Payne, and so forth; and I should think it no indignity, under such circumstances.

5307. Then, if the Government failed to supply you with a circulating medium, you would create one for yourselves?—What can we do? The public come in, and take the circulating medium out of our hands; it does not exist.

5308. Mr. *Glyn.*] You would only then do in London what they do in Manchester every day of the week?—Yes.

5309. Mr. *Cayley.*] You stated that last year, or the year before, things had arrived at a considerable state of difficulty, and that a hint was given to you from an authoritative quarter that you might proceed with safety to yourselves. Supposing that hint had not been given, what would have been the result?—We should have had great pressure and great difficulty.

5310. Supposing that peace had not arrived, and that the war had been carried on, do you think that the Act of 1844 could have been sustained?—That is a totally different question; but at the same time, the first question is also important. The reply to the first question is, that we should have had a recurrence of the things which had previously existed in 1847; I will not say positively so, because we have had a new element in this last year. We have had an extraordinary amount of bullion arriving from Australia, and even from America, entirely beyond all calculation, coming from the bowels of the earth, which has kept us alive during this extraordinary demand upon us for bullion for war and other purposes. We have looked to the arrival of these steamers from Australia as much almost as to anything else, to know whether we were safe in going on with our business.

5311. The destinies of the country seem to have hung upon their arrival?—No question of it. If we had not had those arrivals to an enormous extent which we have had, I defy any person to say what would have been the consequence under this Act.

5312. Mr. *M. T. Smith.*] Should we ever have had the expansion of trade which has taken place had it not been for the original discovery of gold?—I should think not; it is a very happy circumstance that the gold has been discovered, and that the expansion of trade has taken place; that the country has enjoyed such great prosperity.

5313. Mr. *Cayley.*] Do you mean by the original discovery of gold, the discovery of it in Australia?—Yes, and in California.

5314. And you trace the improvement in trade to that cause?—That would be an extensive question again; there are a variety of causes to which it is to be attributed.

5315. It has been stated before this Committee, that in a pressure like that of 1847, men are not looking for money, but are looking for capital; what is your opinion in that respect?—I do not understand it; we only deal in money; I do not understand what you mean by it.

5316. Do you think that men are then anxious for money, in order to pay their acceptances?—"Capital" is rather a large word, because commercial capital does not consist in money alone; capital is in a man's intelligence, in a man's stability of character, and a variety of things which give him that position in the community which we call commercial capital; but if you mean the quantity of money which a man has of his own in his business, if you call that capital, it forms, in most cases, a very small proportion of the money which he wields in his affairs through the credit which is given him by the public.

5317. And in order to vitalise his dead capital, so to speak, he is obliged to have money?—A man, to stand properly in the community, must be possessed of a certain supposed or known real capital of his own, added to his intelligence and his other qualities, which give him a proper footing in the credit system.

5318. And he carries on his operations by means of bills?—It is that; it is the great distinction of our country that we have such confidence in each other that the man who has money hesitates not to lend it to the man who has not for the purposes of his commercial operations; and hence our extraordinary exports

increasing

increasing 20,000,000*l.* in a year, and the great prosperity which has prevailed; hence our having occupied more than 300,000,000*l.* in railroads and other things, and public undertakings. It is because nothing is suffered to be dormant, but everything is brought forward for the general benefit of the community.

5319. Those acceptances are given upon the faith that there will be a circulating medium at the time they fall due to redeem them?—Certainly; that there will be a continuance of the state of things which has grown up to be the honour of the country, settling itself at the clearing-house from day to day without the payment in hard sterling cash.

5320. Mr. *Glyn.*] Something more than the honour of the country is given; there is some representative which is to pass from hand to hand to settle the account between themselves?—No doubt about it.

5321. Mr. *Vance.*] Have you any suggestions to make to this Committee relative to any modification of the Act of 1844?—In my evidence on the last occasion I did throw out some ideas which I should wish to call crude: not knowing that I should be called upon to offer an opinion upon that point, they are hardly digested; nevertheless, in that evidence I did venture to suggest something which I thought would very materially meet the case, and I have not heard or read of anything yet to alter it.

5322. One of the Directors of the Bank of England has told us that their business is the largest in discounts when the rate of interest is high. How do you find that in your business?—That information has been given by me, I believe.

5323. Have you not found that you lose a great amount of first class bills when the rate of discount is very high, which you are in the habit of receiving when it is low?—I must answer that question entirely in reference to the true value of money. If the true value of money justifies a high rate, people must pay it, and will not object to it. If, on the other hand, we attempted to charge a high rate when the true value of money did not bear it out, we should unquestionably lose those bills, but not otherwise.

5324. If the true value of money be very high, do you receive in the course of your business as many bills of first-rate character as you do when it is not?—That depends entirely upon the general amount of transactions afloat. The value of money may be high simply because we have a very contracted currency; it is all a matter of proportion. On the other hand, we may have a very small circulation, and the value of money may be low, because we have a very small amount of transactions afloat; the two things act the one upon the other.

5325. You have a considerable business direct with the manufacturing districts, have you not?—We have, very large.

5326. Do you not find that your business with the manufacturing districts decreases a good deal when the value of money gets very high?—I am not prepared to say that; the best answer which I can make, perhaps, and which is to the point, is, that notwithstanding the large rate of interest which has obtained for a long time past, our discounts have not flagged, but quite the contrary; they have increased in the very first class of paper in the country.

5327. Mr. *Glyn.*] I understand you to say, that you think that whenever the circulation, which generally averages between 18,500,000*l.* and 19,500,000*l.*, falls much below that amount, there ought to be a power lodged somewhere to give the relief required to carry on the settlement of the monetary concerns of the country?—It is my decided opinion.

5328. In what quarter would you lodge that power?—I answer that question with great submission, if you will allow me to use the word, because I am in the presence of the Bank Directors as well as the public in general; I think, myself, that if we gave an unqualified power to the Bank Directors under the present principle of the Act of 1844, it might lead to mischief, because it is not at all impossible that, with a power of extension they might also have a desire of acquisition of profit, and therefore such a power itself must rest somewhere else, or else the right of issue, when they get to a certain point, should somehow or other be fenced round, first as regards the rate of interest, and also as regards the proportion of that interest which they ought to take, and what proportion the Government ought to take.

5329. What would be the governing principle upon which you would allow these extra issues to take place; would it be as a matter of course after the notes had fallen to a certain limit, or would it have any reference to the state of the foreign exchanges?—My opinion is, that in this great commercial country, and

D. B. Chapman, Esq.

24 July 1857.

and under the very artificial system in which we live in our monetary condition, there ought always to be a power of the conversion of truly legitimate sound commercial paper, and that no house should be brought into difficulties, and say that they could not fulfil their engagements, whilst they had paper representing the true transactions of the country (for I say nothing of anything else) of undoubted quality in their possession. Where those notes are to come from is another thing.

5330. Then you probably feel, that if there is a fixed amount regulated by law, circumstances may occur, from internal panic, or some cause of that sort, which may interfere with the possibility of keeping the monetary transactions of the country straight with reference to that fixed amount?—I do.

5331. And that there ought to be a power fixed somewhere, either in the Government or elsewhere, which should go beyond that issue?—That is my decided opinion.

5332. Are there any regulations which you would attach to it as to the rate of interest under which those additional issues should be put out?—In my former evidence I adverted to the fact that long before there was any danger of our hazarding the maintenance of specie payments, it should be obligatory on the Bank to raise the interest to a certain figure, and that if the bullion still declined it should be compulsory on them to raise it proportionately for every 500,000 *l.* This is a matter of degree; but the principle is exemplified by stating the figures. When we arrived at 5,000,000 *l.* of bullion still in the coffers of the Bank, the Bank rate of discount would have reached 10 per cent. I agree to that, because we cannot have it both ways; we cannot maintain our specie payments without paying for it, under certain circumstances. It is absolutely necessary for us to endeavour, if possible, under any circumstances, to maintain our specie payments. Wherefore I think we should arrange our system in such a way that when there is a small amount of bullion the trading community should not be able to carry on their operations, and especially foreign operations, which are calculated to take out money from the country, excepting under the greatest possible disadvantage, I might almost say impossibility; for I need not tell you, as a practical man, that it would be perfectly idle for any man to attempt to bring forward any operations, such as foreign loans, or foreign railroads, or anything calculated to take the money out of the country, if he was told that he could not get it under 10 per cent., and even then with great difficulty.

5333. Then you would have this auxiliary issue made under a certain increasing rate of interest, and that rate of interest to be governed by the decreasing amount of bullion?—I should; I would let it be well understood throughout the country, that as long as a man had *bonâ fide* bills of exchange, representing a commercial value, passing from the drawer to the acceptor, of undoubted quality, he should be able to convert them, and not have the answer given by him that he is obliged to discharge his people at his mills, because he cannot get the money to carry on his concerns.

5334. In reference to the figure to which you have alluded, namely, the 19,000,000 *l.*, you are doubtless aware from your very large transactions, that 19,000,000 *l.* is the amount now necessary for carrying on the settlement of the monetary transactions of England through the clearing-house, under a system of extreme delicacy?—Quite so.

5335. And if any occasion of panic arose, so as at all to interfere with the present existing system of credit, 19,000,000 *l.* would be an inadequate amount, would it not?—Most decidedly so; we have now by the last returns before me, 19,962,000 *l.* out in the hands of the public, and money is exceedingly scarce, from what cause I cannot say; but you know as well as I do, that there is a very great demand for money at the present moment; we have very nearly 20,000,000 *l.* out, and yet money is difficult.

5336. You have been in business now in the city for a great many years; your transactions with the Bank of England, as regards the Government stocks, go on, I believe, almost from day to day; do you entertain the same opinion as I do with regard to the conduct of the business in the governmental department, that nothing can exceed the way in which it is done at the Bank; that the system is as perfect as anything which can be devised?—Nothing can be better.

5337. Mr. *M. T. Smith.*] You have stated, in answer to a question from Mr. Glyn,

Glyn, that under certain circumstances you might be in favour of some relaxation of the Act of 1844?—I have.

5338. Do you think that in an adverse state of the exchanges the parties in whom the discretion lay, whoever they might be, to issue fresh notes, would be justified in making those fresh issues?—I answer the question by what I have previously stated, namely, that there should no case whatever arise where the commercial paper of this country should be inconvertible; and although it is a bold thing for me to say, and God forbid that it ever should happen, and I do not think it will ever happen under what I have suggested, if the question should arise whether we should maintain specie payments, or whether we should maintain the industry of the country, I have no hesitation in saying which I should drop; and for this reason, that the one thing would be very soon remediable. If by any possibility we did not maintain our specie payments, it would be an affair with the foreigner for a very short time, and would soon be put right. If, on the other hand, you obliged parties in the manufacturing districts to say, "We cannot pay our men and must shut up our mills," they would soon settle the question for us.

5339. Would not the return to specie payments be a more terrible affair?—Not at all. Is it the want of property that makes us give up our specie payments? Not at all; the foreigner would trust us just as well in every sense; his note might be depreciated for a time, and the exchanges would go down for a time, but only for a certain time. It is not that we want property, but it is that we are moving under a highly artificial system; and if we have an immense superincumbent demand upon our currency, circumstances may arise to prevent our obtaining that currency. Is the whole commercial industry of the country to be paralysed? Shall we shut up all the avenues of employment?

5340. Is it not quite clear that if you had a suspension of specie payments, the very enormity of the transaction would only add to the difficulty; that you would add to the price of every earthly thing, and affect every contract, and that the distress would be excessive?—My own opinion is, that it would not have that effect at all. Under the suggestion which I have made at your request, we should have got our interest at 10 per cent. Long before that, the transactions would have become very limited, for there are very few trades that can afford to go on at 10 per cent. At the same time we cannot bring our affairs right with the foreigner, if we stop our industry.

5341. The present plan which you are recommending, would be a great deal more stringent and more severe upon the public than the Act of 1844?—I have said that, as regards the interest, we must bear it, and the man who deals in interest must look out. We must all take our chance about it, as we have done lately.

5342. But we have never had, under the Act of 1844, interest at 10 per. cent?—That is another thing. We have two things to do; in the one case to maintain specie payments; the next thing is not to stop the industry of the country; we must have the trade of the country maintained. If we have to pay for the one, we must accustom ourselves to it till the time comes round. If I had to choose between the two, I have no hesitation in saying which I should prefer.

5343. Mr. *Weguelin.*] You were asked by Mr. Glyn whether you thought it desirable, if the active circulation in the hands of the public declined down to from 18,500,000 *l.* to 19,000,000 *l.*, that there should be some interference in order to relieve the public. That must be an erroneous way of putting the question, inasmuch as there is still the reserve in the Bank which is applicable to the extension of that circulation?—Yes; I would rather avoid allusion to any particular amounts, because we are speaking of principle, and not of degree.

5344. As long as there is a reserve of notes in the Bank of England, the wants of the market can be supplied from it?—Quite so.

5345. You have referred to the pressure in 1825; does your recollection lead you to consider that that was a pressure on the banking interests rather than on the commercial or mercantile interests?—My impression is that it was upon the banking interest.

5346. There were very few commercial failures?—There were very few commercial failures; they were chiefly among the banking interest.

5347. It was owing principally to the bankers having invested their deposits in such a manner that they were not able to realise them at the time?—I presume that was the case; my only observation of the banking interests is, that

D. B. Chapman, Esq.

24 July 1857.

the system has been very much improved since that time; the banking business of the country is infinitely better understood, and better managed than it was at those periods.

5348. Therefore a low rate of discount for bills might have been quite consistent at that time with a very great panic, on account of the position of the bankers?—Entirely so. A great many securities were brought forward into the market by bankers (I speak of country bankers particularly) to supply their exigencies, which were thrust upon the market at a very great sacrifice; but in the commercial world my impression is that there was not such a very great pressure.

5349. There was therefore a material difference in the character of the pressure in 1847 from that which ocurred in 1825?—I should say decidedly so in the character.

5350. It was not until the month of October 1847, when the distress seemed to have reached the banking interest, that the panic became really alarming?—I think, if I remember rightly, it was very severe indeed in the spring of the year; and yet it is a very curious fact that the rate of interest in March 1847 was not so extremely high; the rate of interest by the Bank was then 4 per cent.; we were higher than the Bank; we were 4½. The Bank rose up to 5 per cent. on the 1st of April; we went up to 6; we went before the Bank, and a good deal too.

5351. There was great pressure and great distress amongst the commercial classes, but there was nothing that amounted to the degree of panic which there was in 1825?—No; I think the panic was of a different character. The panic in 1847 was a panic lest we, none of us, should be able to get the notes; that was the real cause of the panic in 1847.

5352. Mr. *Glyn.*] The difference in the character of the pressure in the month of April 1847 and in the month of October was very distinct, was it not?—I hardly know what was the distinction, excepting that failures followed in October; when we got that large arrival of gold, I believe from Russia, in the spring of 1847, it put matters straight for a time, but the sores showed themselves afterwards, and failures took place in the fall of the year.

5353. Were not the exchanges against this country in the spring of the year?—Decidedly.

5354. And were they not in favour of this country in October?—All that I can say about the exchanges, and more I cannot say, of course, without the table, is, that the general amount of notes in circulation increased; from the 4th of November there was a slight increase, week by week, in the notes of the Bank, occasioned by the state of the exchanges, I suppose, or by money being sent up from the country.

5355. Mr. *Weguelin.*] In 1847, in point of fact, there was no very great alarm and panic, until one or two banking failures took place in the City of London?—I think there were a great many failures; Reid, Irvings, Cockerells, and a great many of that description, where a good deal of money had been obtained upon credit, and the houses sank under it; and then that got magnified by the daily papers, and caused a general feeling of panic throughout the country.

5356. Mr. *Hildyard.*] I observe that when you spoke of the operation of this Act, you stated that it operated, in your opinion, beneficially, as compelling the Bank at an early period to sound the alarm; but that you thought that it operated prejudicially on several occasions, where pressure arose from causes which you specified?—I do not think I put it in the words which you have stated; I said that it had great merit, but that it had great defects.

5357. I understood you to state that, in your opinion, it aggravated the pressure under which the country would labour in the particular cases which you specified, namely, a failure of the harvest, war, panic, and irrational hoarding?—I did not say irrational, I said unjustifiable hoarding. I wish particularly that the Committee should understand this, that, under a very restricted circulation we are completely at the mercy of some great institutions and individuals, and that is a very important thing which we should all understand.

5358. Then you meant by unjustifiable hoarding, hoarding with a view to aggravate the pressure, and to take advantage of the consequences?—That is the application of the word unjustifiable; but also it should be observed that we have such immense gigantic powers, which have risen up, that it is perfectly easy for the joint stock banks to meet at their council and say, we do not like the

the aspect of affairs; we think that the exchanges are going down, and that we shall have a pressure for notes; let us increase our notes 500,000 *l.* Suppose that happens in three of those establishments who can do it with a word, who have only got to say, let it be done, and it is done, is it possible not to foresee that we are completely convulsed? It is merely to send notices out for the money which they have at call, and to the Stock Exchange, and to collect their bills falling due *de die in diem*, and the public are destroyed.

5359. The occasions which you have specified are occasions against which the ordinary prudence which you have to expect in mercantile men cannot guard. A failure in the harvest might occur even yet in this country this year, might it not? War on gigantic proportions might suddenly break out, and those evils might bring about the panic and the unjustifiable hoarding to which you have alluded?—Most clearly.

5360. Need I ask you whether an immense proportion of the commercial legitimate enterprise of the country does not involve a considerable length of time in order to bring the undertaking to its completion?—Clearly.

5361. Therefore, persons legitimately conducting their business, and exercising all the prudence which ought to be exercised by persons conducting business, may be caught and severely acted upon, on the occasions which you have specified?—More than severely acted upon; they may be absolutely disabled from fulfilling their engagements, although they are ever so solvent.

5362. It has been asked what the effect of a panic is; whether it does not reduce us to barter, and we have been told that it might induce employers to discharge their workmen, and so paralyse the industry of the country; but is not a consequence of a person being unable to meet in money his acceptance, that it is, by law, an act of bankruptcy?—That is a question of law.

5363. That is a question of law. As a practical man do you not know that is so?—I believe it would very nearly amount to it. You give seven days' notice, or something of that sort; it is a very summary affair.

5364. So that if I have an acceptance of 10,000 *l.* to meet, and in a panic could not meet it, but said here is 20,000 *l.* worth of indigo, take that instead, that would be no discharge of my obligation, and I, though a perfectly solvent man, should be reduced to the condition of a bankrupt?—That is perfectly true.

5365. May we not illustrate the effect of a panic by a matter which certainly seems at first sight very foreign to it. Supposing that at this moment, having reference to the fineness of the weather, any member of this Committee wanted a cab to drive to the Vauxhall Station, I imagine there is no doubt that he would find a dozen upon every stand to which he chose to go; but supposing that a thunderstorm came, might not he send for miles and not be able to get one at any price. Is not that, in some measure, an illustration of what occurs in a state of panic?—Yes, but it is comparing very great things with very small.

5366. Is it not upon this principle that your currency is adapted to the ordinary transactions of the nation, and that a panic of course calls for a most extraordinary supply?—Beyond doubt.

5367. Supposing, therefore, that the Act of 1844 could be shown to produce or to have a tendency to produce panics which would not otherwise arise, you would regard that as objectionable?—Yes.

5368. You have told us what was the state of things in October 1856; the Bank reserve was reduced to 2,550,000 *l.*?—It was.

5369. There was nevertheless lying in the vaults of the Bank 9,200,000 *l.*?—It is perfectly correct.

5370. You state that in October there was a very fidgetty and anxious feeling on the part of all men of business?—Very much so.

5371. Might not that feeling have been, in your opinion, easily aggravated into a panic by some additional circumstance of alarm?—Undoubtedly it might.

5372. Did not the funds even fall in 1856, from 95, or between 95 and 96 in August, to 91 in the month of October or November; is that within your knowledge?—No; we do not deal in funds.

5373. Is it not within your knowledge that there was a large fall in the funds in a short time?—I cannot answer that question.

5374. If it had not been for the Bank Acts of 1844, which reduced the reserve of the Bank which was available to 2,000,000 *l.*, while it had within its coffers

 9,000,000 *l.*,

D. B. Chapman, Esq.

24 July 1857.

9,000,000 *l.*, do you believe that there was anything in the circumstances of October 1856, which would have created that anxious feeling of which you have been speaking?—Certainly not; we should not have had the slighest anxiety; our anxiety is shown practically by the fact that we charged one half per cent. higher than the Bank of England rate, and yet our discounts increased so very much that we could not keep them under.

5375. Therefore, but for the operation of the Act which at that moment reduced the available reserve, if I may say so, to 2,500,000 *l.*, when the actual bullion was 9,000,000 *l.*, there would not have been that feeling of anxiety which you say might easily have been aggravated into a panic?—Just so.

5376. Mr. *M. T. Smith.*] But the whole of that 9,000,000 *l.* of bullion was represented and in circulation in the shape of Bank notes?—Yes; though the Bank of England held only 2,500,000 *l.*, the public held 21,000,000 *l.*

5377. Mr. *Hildyard.*] I am quite aware of that, but of the whole amount of bullion which the Bank possessed, which at that time was 9,200,000 *l.*, it practically could only use 2,550,000 *l.*, there being 21,156,000 *l.* of its notes in circulation, leaving therefore only 2,550,000 *l.* of notes which represented bullion?—No, that would not be the right way of stating it; you must look at the notes in the aggregate, if you will allow me to say so. On this occasion the total amount out was 23,706,000 *l.*; now that was held between the Bank and the public; the Bank had its share, and the public had its share; the Bank held 2,550,000 *l.*

5378. Why was the Bank reserve only 2,550,000 *l.*; was not that the consequence of the Act of 1844?—No. You are right in one respect, that is to say, that if we had not had the Act of 1844, the Bank of England might have extended their issues without danger no doubt.

5379. So far as 9,000,000 *l.* of bullion in their coffers went?—Yes; but that is a matter of degree.

5380. Still if the Bank had stood in the position in which they would have stood if the Act of 1844 had not existed; that is to say, that they might have extended their issues as far as they thought proper, having regard to the bullion in their vaults, there would have been none of that anxiety to which you have alluded?—No; the state of things was just as it was in 1847; we were then on the brink of a convulsion, with an immense amount of bullion in the Bank locked up.

5381. With 8,100,000 *l.*?—Yes.

5382. Therefore, were not the crisis of 1847 and the anxiety in 1856 which you have described, a consequence of the Act of Parliament which limited the power of the Bank to issue its notes?—There is no doubt about it. But talking of the year 1847, it was not at all confined to that particular week; more or less during almost the whole of the year 1847 we carried on the money business with anxiety.

5383. You corrected me, and I am very glad you did so, when I attributed to you the words "irrational hoarding," and you have spoken of "unjustifiable hoarding." Must it not be within your knowledge, as a man conversant with the great transactions of this metropolis, that capitalists do avail themselves of these crises to make enormous profit out of the ruin of the people who fall victims to them?—There can be no doubt about it. Certain persons in the community say, "We act under the law; if you choose to make law, and give us the opportunity of making these profits, why should we not do it?"

5384. They are acting under the law, and strictly in accordance with it; but is it within your knowledge that powerful banking houses, in the crisis of 1847, bought London and Birmingham debentures as low as 75 *l.* per cent.?—That is an argument *ad rem*, which I cannot go into.

5385. I specify no houses, but merely ask whether it is within your knowledge that banking houses in London bought London and Birmingham debentures as low as 75 *l.* from persons who were in extremity to meet their acceptances?—I cannot say that anything of that sort ever came under my particular notice. I never saw anything of the kind. But the same principle obtains in everything. Look at the Caffres. We send them out guns to kill our own men. A man says, "I will call in half a million of money from the Stock Exchange and knock the things down, and I will buy them cheap."

5386. It is the principle which prevails when a scarcity of corn occurs; the persons

persons who happen to be possessed of it hoard it to get the largest possible price?—It is the same principle.

5387. And it is one of your objections to the Act of 1844, that it affords such opportunity?—That it makes no provision against the public being so injured.

5388. We have been told that the reason why 14,000,000*l.* was fixed as the amount of notes to be issued on security was, that the minimum active circulation previously to that time had never been below 15,500,000*l.*, of which 1,000,000*l.* had been Bank post bills not within the operation of the Act, and that there had been 6,000,000*l.* of notes which, though existing nominally in the hands of the public, had been known to be lost and had been since written off, and that therefore 14,000,000*l.* was taken as the least circulation under the operation of the Act, and it was assumed that there always would be that amount of circulation in the hands of the public, and consequently that if bullion existed for every note issued in excess sufficient provision was made for the currency. That has been proved in evidence before this Committee. Were you aware that that was the principle?—I was not; I never knew exactly by what it was governed.

5389. Assuming that such evidence has been given, and that evidence has been given that since the Act of 1844 the minimum circulation has never been less than 16,500,000*l.*, and that the late Governor of the Bank of England has stated to the Committee his belief that it never will, considering the extension of our commerce, fall below that point, ought we not, in your judgment at all events, to relax the Act to this extent, that we should make 16,500,000*l.* the amount of the notes issued on security, instead of the 14,000,000*l.*, and should we not be taking the same precaution for convertibility which was taken in 1844?—That is a most important question; I think it might be done, but I think that if it was done without some reference to the Bank of England, we should gain nothing material from it. The principle of the Act of 1844, as I have always understood it, was that the Bank of England had the right to make whatever they could of their banking money. If therefore you give them an additional issue of 2,500,000*l.* to play with, they will be exceedingly wrong, assuming that they take advantage of what they have a right to do, if they do not employ that to the full. Then we shall be just in the same condition; they will have no reserve of notes to assist the commercial world, who must be assisted in case of necessity.

5390. In October 1856, instead of the reserve being 2,500,000*l.*, it would have been 5,000,000*l.*?—That does not follow.

5391. Do you mean that it does not follow that the Bank would have pursued such steps as would have then given them 9,200,000*l.* in their coffers?—No; I will agree with you as to that sum; but the difference is this, with respect to the notes held by the public and those held by themselves: it may happen that the Bank, anxious to make a profit, which they have a perfect right to do, according to the principle of the Act of 1844, would have discounted a great many more bills, and that they still would only have had 2,500,000*l.* in their hands, and that we should have been just where we were as regards the reserve; the Bank would have made the profit without the public being benefited.

5392. You assume that it would not have made any difference in the amount of bullion in their coffers?—I assume that.

5393. Then, if they had been allowed to issue notes against all the bullion in their coffers beyond the difference between 16,500,000*l.* and 21,155,000*l.*, subtracting that from the 9,200,000*l.*, would it not have left 4,550,000*l.*?—There would have been an increase. In the first place, take the fixed quantity of gold, the 9,200,000*l.* of gold remains unmoved in the argument; but you wish to increase the notes, 2,500,000*l.* Supposing this increase of the notes is admitted to the Bank without any sort of protection to the public, it will follow that they will use those notes, and with the increase of the commerce of the country you will find that they will take 2,500,000*l.* more securities in all probability, and the notes which the public have may not be, *pro tanto*, enlarged.

5394. £. 21,155,000 was the amount of notes in the hands of the public?—Quite so.

5395. The Bank would have been authorised, according to this supposition, to issue 16,500,000*l.* upon securities?—Quite so.

5396. Subtract that from the 21,155,000*l.*?—Assuming that we granted to

D. B. Chapman, Esq.

24 July 1857.

the Bank the power of issuing 2,500,000 *l.* more, will you kindly tell me what will then be, according to your mind, the total amount of notes issued to the public?

5397. What would have been the reserve of the Bank in 1856, if, instead of 14,000,000 *l.* on security, they had issued 16,500,000 *l.*?—You cannot answer that question, excepting you know the amount of securities which they would have held. At this time, in October, the total of notes issued altogether amounted to 23,538,000 *l.*

5398. I was before taking the active circulation?—That amount represents the bullion, plus the 14,000,000 *l.* Now, you propose to add to that 2,500,000*l.*; that will make it 26,000,000 *l.* in the rough. The question, then, is this; supposing that the Bank are allowed to use that 2,500,000 *l.* for their own beneficial purposes, without any sort of fence, what amount of that 2,500,000 *l.* of votes will they use for their beneficial purposes? That is the point.

5399. I am not asking what they would have done, but I am asking you whether the practical reserve of the Bank of England, that is, their power to issue notes, would not, under such circumstances, have been increased from 2,500,000 *l.* by the sum of 2,500,000 *l.*, that is to say, to 5,000,000 *l.*?—No, it does not follow; this follows, that they would have had an opportunity of obtaining 2,500,000 *l.* more securities.

5400. But at all events you would then have taken precisely the same security for the convertibility into coin as was taken in 1844, because that amount being the minimum circulation which you could contemplate, if there had been bullion for all above it, you would have taken just the same security as was taken in 1844?—I incline to adopt that idea, and that the amount might be increased; but I accompany that with the previous observation, that if such an increase be permitted, it should be also fenced, that it should not be permitted for the benefit of the Bank. It is a very important thing.

5401. You are aware that the provision in the Bank Act was, that if the Bank issued notes to supply the place of the country notes which should be extinguished, the profit of that issue, minus such expense as the Bank was put to, was to go to the Government; therefore, in case of any such relaxation as that which I am speaking of, of course the Government would take care that the profits of that increased issue of notes should on a similar principle operate for the benefit of the public?—Yes.

5402. Mr. *M. T. Smith.*] The Bank notes at the moment stated by Mr. Hildyard were 23,500,000*l.*; supposing the Bank of England had been permitted to issue 2,500,000*l.* more, do you think that the total circulation then would have been 26,000,000*l.*?—Yes, it would.

5403. Do you not believe that bullion, to an amount as great as the extra issue of notes, would have gone out of the country?—No, I do not think it would.

5404. Do you think that the actual notes in the hands of the public would have been *boná fide* increased to the whole amount of 2,500,000 *l.* permitted to be issued?—First of all, the 2,500,000*l.* of notes find their way to the coffers of the Bank; they have them to use; the question is, whether they will use them or not; whether they will keep them to meet commercial necessities, or whether they will force them out by lowering the interest and effecting discounts, and doing things which we know they do.

5405. If those notes were used, would they not displace gold?—That is a difficult thing; in process of time they might, but it is not an immediate action.

5406. Mr. *Tite.*] You stated, that in 1847, when the Bank advanced you money, the Bank had 10 per cent. for it?—They relaxed it afterwards to nine.

5407. According to the evidence of Mr. Gurney, which I have before me, they did not charge more than 9 per cent.?—First of all, the words were these, "You may have the money, but we shall charge you 10 per cent.;" afterwards, on the Monday, they relaxed it to 9 per cent.

5408. Mr. Gurney says, that it was upon his appeal?—I went myself; it was very vexatious; but we had to bear it as well as we could.

5409. In point of fact it was 9 per cent. and not 10 per cent.?—They charged us in the first instance 10 per cent.; it was relaxed afterwards to 9 per cent.

Mr. *Edward Capps*, called in; and Examined.

5410. *Chairman.*] ARE you acquainted with the building trade?—Yes.

5411. In what capacity are you conversant with that trade?—I have been engaged in surveying and building for 30 years past. My recollection extends back as far as 40 years.

5412. Has your attention been directed to the influence of credit upon the manner in which buildings are erected in London?—Yes.

5413. Is it the fact that speculators in building in the metropolis carry on their transactions to a great extent upon credit?—There has been a very great change even in my own experience in the mode of carrying on buildings in London, as regards financing. When I was quite a lad, I know from the daily conversations which took place in our family upon the business, that houses built in London were more built to order than now; they were not built so much on speculation as at the present time. It is changed in this way. You must build houses now ready for the market, the same as a bootmaker must make boots, or a stocking manufacturer must make stockings or any other article. People do not now, generally speaking, order houses to be built so much as they did in those days; but if they want houses they go round and see where houses are already constructed, and select those which are most suitable for them. Therefore builders find it just as necessary in the present day to have their commodities ready for the market as any other person carrying on any other branch of business; it was not so much so formerly.

5414. When a person ordered a house to be built, did he himself furnish the capital for building it?—Builders generally used to draw upon account. Suppose a house cost 5,000 *l.*, in making the estimate, or the contract for it, it would be specified that at a certain stage of the work the builder should receive 500 *l.* or 1,000 *l.*; at a subsequent stage so much, and so much upon the balance, after a certain time had elapsed. The mode of payment was generally specified in the agreement which was made. But work was done a great deal in former times upon measure and value-prices being given for the work. Now, public tender has come very much more into operation, and people generally have an estimate made beforehand of the expense, and a contract entered into; there is that difference. With regard to speculative building, the change has been more of this nature. Formerly, 40 years ago, what houses were built upon speculation were built out of the savings and the profits of builders upon their ordinary jobbing business, and it answered very well at that day. Builders conducted their transactions with very great moderation and prudence; they always had three or four houses upon the stocks, just to keep their men in constant employment, their main reliance being on their ordinary business. But now the system of building is quite altered in that respect. A man can do no good by doing business in that way; he must go and take a large plot of ground, and he must perhaps engage to lay out 20 or 50 times the amount of his own capital upon it; and if he can get through his undertaking before any crash comes, if he can run up a lot of structures (and many of them are very flimsy, I am sorry to say, at the present day), he may make a good slice of money, but he is liable to be pulled up very suddenly by a failure in the finances, from the uncertainty of our present monetary system. I have known frequent cases of that sort where people have been entirely brought to a stand still, and the money which they had laid out has been completely sacrificed by a sudden failure of the means.

5415. Then at present the general practice is to build upon a large scale, relying upon a demand for houses when they have been built?—Yes, and raising money upon mortgage as the buildings proceed. Almost the whole of Belgravia and Tyburnia, and the countless thousands of villas round London, are built upon that principle. A man makes an arrangement with some solicitor, who has clients ready to advance money, and he says, "As you go on we will advance a certain portion on mortgage." That is the way that the builder generally finances.

5416. Does he get credit from the brickmaker and the timber merchant, and those who furnish the materials of the house, or does he pay them in ready money?—If he is well known he may get a little credit in that way; but that credit has of late years been very much circumscribed. With regard to bricks especially, you must pay very nearly ready money now for all your transactions with

Mr. *E. Capps.*

24 July 1857.

the brickmaker. If the builder is well known, and has been an established man for many years, he may get some three months' or six months' credit for his bricks or timber.

5417. Then, in general, the materials are paid for, but the money is borrowed? —The money is borrowed; the man must have some capital to begin with. I might take a piece of ground requiring a capital of 50,000*l.* I could commence a speculation of that kind probably with not more than 1,000*l.* or 1,500*l.*, just enough to start with.

5418. What influence have the present laws relating to currency upon the building trade in particular?—The present law, I think, influences the building trade more in this way than in any other, viz., in the uncertainty of being able to carry through any undertaking. When you take a large plot of ground, involving, perhaps, the building of 100 or 200 houses, that undertaking cannot be got through in a moment. Perhaps you may have five or seven years given you to complete it; you have to build so many, perhaps 10 houses a year, and before you can get through the undertaking, and finish it, although they may be the very sort of houses which are wanted, and although they are occupied the moment they are finished, and at remunerating rents, yet, perhaps in the midst of your undertaking, or before you have advanced one-third in it, the means of carrying it out may be withdrawn, and all that you have laid out sacrificed. I myself have known well-built houses in that way in an unexceptionable situation, costing the builder, who was a friend of my own, 1,600*l.* apiece, which houses were offered to me at 850*l.* in one of the panics, and were sold at the Auction Mart at something like 800*l.*, which was about 50 per cent. off the prime cost to the builder.

5419. In what way do you think that the law of the country could protect the building trade in particular, if the transactions are speculative to a great extent? —I do not think that the building trade requires particular protection, nor so much as many others, for it is of that description that it has a kind of natural protection compared with what many other branches have. You cannot import houses from other countries, and put them up here; so that there is, in some degree, a natural protection to building; and yet the very uncertainty of our monetary system acts with verygreat intensity upon the prospects of the builder notwithstanding.

5420. Then would you render the monetary system less uncertain?—I think that that goes to the very principle of the currency question altogether. I think that the whole system upon which our money is based by the Act of 1819, confirmed by the Act of 1844, is wrong; I think we have got a wrong kind of pound, to begin with.

5421. What do you consider to be the defect of the Act of 1819?—The Act of 1819 I think, in the first place, introduced into this country a pound which was never known in this country before, exclusively. Previously to the year 1816 or 1819 (I do not know which), with the exception of 10 years from 1774 to 1784, (which exception I will mention afterwards), a debt might be paid either by tendering the silver coin of the realm at 5*s.* 2*d.* an ounce in weight or in crooked sixpences by tale. You might pay 10,000 *l.* in crooked sixpences, or the debt might be paid in gold at 5 dwts. 3 grs. to the pound; I believe that from 1774 to 1784, you could not pay above 25*l.* by tale, but otherwise it might be paid by weight.

5422. Would you recommend the issue of an inconvertible paper currency with the view of remedying the evils which you describe?—I was present, and heard the examination of Mr. Twells, and he was mentioning a project by which he thought that instead of the 14,000,000 *l.* of paper which the Bank issues upon securities, you might go to the extent of 20,000,000 *l.* of an inconvertible paper. I think I understood the proposition rightly as being to that effect. Though it is not exactly the proposition which I should make, yet I cannot see any objection to that proposition myself. Mr. Twells said, that he would be content with 14,000,000 *l.*, but recommended 20,000,000 *l.* I cannot see how that would act injuriously, or give a less valuable pound than we have at present, for that is the great point to look at, that we do not alter the value of the pound so as to interfere with existing contracts.

5423. You do not think that it would be undesirable to have two paper currencies circulating at different values?—I do not think that that would be the effect of it;

it; but if it should be so, the difference would be so trifling that precaution might be taken to prevent any inconvenience from it.

5424. Do you believe that the building trade has been subjected to difficulties in consequence of their not being able to obtain advances at a moderate rate of interest?—Undoubtedly so.

5425. What is the general rate of interest which speculators in building pay for advances?—When money is in a fair and easy state, I do not mean to say extraordinarily dear or extraordinarily cheap, we are very well content to pay five per cent. upon security or mortgage. If I build a house for 1,000 *l.*, and can raise 600 *l.* or 700 *l.* upon the security of it, and pay five per cent. for it, I am content to do it; but it does not answer my purpose to pay more than that; I cannot get any profit out it, if I do.

5426. Then, do you think that there should be some legislative provision by which loans should be secured to the building interest at a rate not greater than five per cent.?—I hardly know what you mean by loans being secured to the builder; I should say, that if he has property of adequate value, he should be able to obtain money at five per cent., on giving good security for the advance of that money. I do not think it is any part of the business of the Government to take care that I particularly am supplied with money, but merely mean, that all people having property should be able to obtain money at that rate.

5427. You think, generally, that all persons having property should be able to borrow whenever they want money, at a rate not greater than five per cent.?—I think that is essential to the welfare of the building trade, of which I am particularly speaking. I do not know how it may apply to other branches of business.

5428. Is there any other point which you would wish to mention to the Committee?—There are several points which perhaps some Member of the Committee may be good enough to examine me upon.

5429. Mr. *Cayley.*] You have just been asked whether you think that the building trade should have secured to it by Act of Parliament money at the rate of five per cent.; is it your opinion that any Act of Parliament should specifically give to any class of industry any particular rate of interest?—Certainly not.

5430. Then, is it your opinion that the fluctuating rates of interest, and the high rate of interest which the building trade has often experienced for many years past, are owing to an Act of Parliament, and that they might be prevented by an Act of Parliament?—I think so.

5431. You stated that a great change had taken place in the building trade?—Yes.

5432. When did that change begin to take place?—My recollection only extends back to about the year 1817. Then I was but a boy, and could only gain my knowledge from hearing conversations upon the subject; but the change has been gradually increasing. We have had seasons of greatprosperity; for instance, I will mention the year 1824; then we could not get men; I ran after men in the streets then, and begged them to come to work for us at an advance of wages; there was then a time of prosperity, and we got very good profits upon business.

5433. You have stated that the system used to be to build to order, and that now it is the system not to build to order?—Not so much.

5434. But that it is a speculative business?—Yes.

5435. What led to that?—I think this: I think the profits of business have been very much cut down within the last 30 or 35 years; I think a man who wishes to rise in the world can hardly expect to rise by following out a fair trade, what is called a jobbing trade, he will not make sufficient profit out of it; it is necessary for him to add speculative building to it, and that must be done not on a small scale; it must be done upon a large scale, for the builder makes very little profit out of the buildings themselves; he makes the principal part of the profit out of the improved ground-rents. Perhaps he takes a piece of ground, and agrees to give 300 *l.* a year for it; by laying it out with care, and putting certain descriptions of buildings upon it, he may succeed in making 400 *l.* or 450 *l.* a-year out of it, and his profit would be the increased ground-rent of 100 *l.* or 150 *l.* a-year, rather than the profit of the buildings which he puts upon the ground; that, in many instances, he scarcely looks at at all.

5436. Then, do you think that in these speculations the demand for houses

Mr. *E. Capps.*

24 July 1857.

is anticipated, and that there is no natural demand for them?—No. The tendency of the present mode of business is to render it necessary for a builder, in order to carry out his general business, to have the houses ready to be sold or let when there is a demand for them; he must not wait; he must not expect to get business by waiting till the order has been given for a house to be built, but he must have that house ready in the market to be taken up when it is desired.

5437. Is additional house accommodation very much wanted?—Very much wanted.

5438. Then in point of fact these speculators do not anticipate, but meet the demand?—They know that if things are let alone, the houses will be fully occupied, because building does not proceed so fast as the population. Any excess of building is always sure to be corrected in the course of a year or two. The population, I think, doubles itself in about 45 years. In 45 years' time there must be as many more houses built in London as now exist.

5439. The manner of conducting the trade having been altered, the builder, speculating upon the usual and ordinary demand, builds houses upon credit?—Yes.

5440. And the present state of the law, in your opinion, producing great changes in the value of money, in the midst of that speculation he is cut short, and his speculation fails, and his workmen are thrown adrift?—Yes; that is my opinion.

5441. Are you of opinion that the principles of our present monetary system are unsound?—I am.

5442. What do you understand to be the principle of the Acts of 1819 and 1844?—I think that the principle of the Act of 1844 is twofold. One principle of the Act is, that your mixed circulation of gold and paper shall be made to fluctuate exactly as it would do if it were an entirely metallic currency; and the second principle, I take it, is this, that the pound sterling ought to be at all times a fixed and unvarying weight of gold, say 5 pennyweights 3 grains, according to the present standard.

5443. Do you consider those unsound principles?—I do, quite.

5444. In what respect are they unsound?—I expected such a question as that to be put to me; and as it is rather an abstruse subject, and never having been previously examined before a Committee, I did not know whether I might be able to find the exact language in which I should express my opinion. I therefore beg to be allowed to put in a paper in answer to that question.

5445. Will you read it?—I consider the principles of the monetary system unsound on these grounds: "First, Because the currency, as an indispensable tool or instrument of daily and hourly use, ought not, if it can be avoided, to be of that nature as to render it liable to be withdrawn from its proper sphere of usefulness and action, for the sake of the material of which it is composed, putting thereby the subsistence of tens of thousands in jeopardy. The fluctuations which from this cause are inseparable from an entirely metallic system, are themselves, therefore, an imperfection which a properly constituted monetary system should not fail to remedy. To say the best, therefore, of a principle which affirms that 'the circulation of the country should fluctuate exactly as it would do if it were entirely metallic,' is this: that it seeks to perpetuate an imperfection; and I venture to affirm that the greater part of the questions which will have been put during this inquiry will have been for the purpose of ascertaining whether this imperfection has been scrupulously carried out in the movements of our currency during the last few years. Secondly, Because you cannot accomplish with it an object which it is essential to accomplish in any country where indirect taxation is much employed to raise a revenue; viz. the repayment to the producers of goods of the taxation which those goods bear, without increasing the metallic price of them. If you do not repay the taxation to the producer, you violate the principle and the condition upon which indirect taxation is levied, and which Mr. M'Culloch describes in these words, 'When a tax is laid on a commodity, the price necessarily rises in a corresponding proportion, otherwise the producer will not obtain the ordinary rate of profit.' And if you do allow taxation to be added to the price of goods, you increase the metallic price of them, in violation of the universal law of barter, and to the destruction of the foreign market for them. The fulfilment of these two conditions is impossible under the present money system, but was fully accomplished by that which preceded it. Thirdly, Because gold is not the natural standard of value as this

system

system assumes, but a convenient measure of value only. Mr. Horner put both corn and gold in their proper respective positions, when he said, 'Corn is the admitted standard of all values, the precious metals being the practical measure.' Parliamentary Debates, new series, vol. 9, pp. 909, 910. That, consequently, the very principle which the upholders of the existing system deem to be its perfection and its glory, namely, that a 'pound' ought to consist of a fixed unvarying weight of gold, is an unsound principle; that such a pound is incapable of the fluxional value which it is essential it should possess, to give effect to the spirit and intention of indirect taxation, and to preserve that equilibrium of gold prices in all the markets of the world, which the supporters of the existing system profess a desire to see accomplished, but which the circulation of such a pound effectually prevents. Fourthly, Because such a 'pound' exclusively, was unknown in this country until Sir Robert Peel established it. Fifthly, Because a circulation founded upon these principles is incapable of that necessary degree of expansion which the constantly increasing quantities of goods render indispensable. That the absence of this expansive quality gives the possessors of money the almost entire command over the increased and increasing productions of the country, to the undue exclusion of those by whose labour the enlarged stock has been produced. This was well described by the 'Times' some time ago, when it said, 'a fact which strikes any one on the face of society is this: That the increase in the comforts of the lowest classes is not at all proportionate to the increased facility with which these comforts are produced.' The 'Times' failed, however, to perceive that the very money system which it so strenuously supported was the main obstacle to this necessary improvement in the condition of the labouring classes. Sixthly, and lastly, Because it hinders the production of wealth, and forbids the creation of that ample stock of all kinds of commodities which the people want to consume, and which their own labour would provide for them, if they were not frustrated in their attempts by the breaking down of the money system as soon as their activities become fully engaged in production."

5446. Will you explain a little more in detail how you consider the present system affects the producers of goods who are indirectly taxed?—It affects them in this way: That the increased price which indirect taxation renders necessary cannot be obtained for any length of time together, because it leads to the export of gold from the country. The system which preceded the present, and which was accidentally fallen into in the year 1797, allowed gold to rise with goods, and therefore if the goods rose in price gold went up with them. The guinea went up to 24*s*., 25*s*., 26*s*., 27*s*., or 28*s*., as other goods went up, so that equal produce still exchanged upon equal terms. We now hold gold down, and the tax taking effect upon the goods alone, the gold becomes the cheapest article which the foreigner can take; and though you may for a short time get an increased price for the goods, yet that leads to the export of gold, the exchanges turn against us, and when the gold is exported then the screw is put on, and the goods which were formerly selling at a remunerative price, with the tax upon them, are pulled down by the contraction of the money market, by the higher rate of discount, so that you are precluded for any time together from getting the taxation price for the goods.

5447. In that case the tax falls upon the producers?—Yes, ultimately.

5448. But the price of gold during the war did not rise materially till 1810?—No, it did not.

5449. During that period were the producing classes enabled, according to your recollection, to obtain the indirect taxation which they had advanced upon their goods?—I cannot speak of that time from my recollection, but only from my reading, of course. I am inclined to think from that that they did receive taxation prices, because goods rose up at last during that time to about 50 or 60 per cent. beyond the prices at which they were in 1797.

5450. Although the price of gold did not?—Although the price of gold did not; it was against law for gold to rise.

5451. Therefore you assume that the Bank of England being not restricted in their note circulation at that time, except by their own discretion, that was sufficient for the indirect taxation to express itself in the price of goods?—Yes; the paper money of the Bank of England allowed that additional price.

5452. You would not be desirous of having the Bank Restriction Act renewed in the shape in which it then was, would you?—Not in the shape in which it

Mr. *E. Capps.*

24 July 1857.

then was exactly, but it would be far superior to the present system, I think, even if it were.

5453. Your desire is to see, in the place of the present system, as I understand you, a legal tender, which is not liable to be exported?—Yes; that you should have this instrument or tool constantly in use, without its being withdrawn for the sake of the material of which it is composed.

5454. Do you believe that a legal tender is a thing so necessary to commerce, that, supposing 20,000,000 *l.* of Bank notes are now necessary for commercial convenience, if the amount were reduced to 10,000,000 *l.*, those notes would be double the value which they now are?—I cannot say that prices exactly follow the relative proportion between commodities and the quantity of money; for there are so many modes of economising money at the present time, that I think it a dangerous doctrine to maintain that prices are exactly in proportion to the equation between money and commodities; but there is not the least doubt that such a lowering of notes from 20,000,000 *l.* to 10,000,000 *l.* must increase the pressure and lower prices amazingly, though whether exactly half I cannot say, and I think it cannot possibly be said by any one.

5455. If a legal tender be a thing of ascertained convenience to commerce, and of necessity to commerce, under the law, the value of it will depend more or less upon its supply?—Yes.

5456. You have stated that you think that there should be some means of expansion, under particular circumstances, of the currency; what do you mean by that?—I think that there wants very little provision to be made for the expansion, if you take away the rigidness of the present system. It appears to me that our present system has only one principle, namely, that of contractiblity, and not of expansibility at all. I think that if you adopted anything like Mr. Twells's proposal of 20,000,000 *l.* of notes, as he mentioned, there would be very little need of making any further provision for expansion, and it could be done by the same measure, if necessary; you might increase to 21,000,000 *l.*, if you found that the transactions of the country required your doing so.

5457. Do you believe that there would be any need of a further expansion than 20,000,000 *l.*, provided the country banks were free, the country circulation being convertible into the legal tender?—The Bank of England must issue, say 5,000,000 *l.* or 6,000,000 *l.*, upon convertibility into gold. It would be no relief if you substituted merely 20,000,000 *l.* for 20,000,000 *l.*; but if you took away the Bank securities, and allowed the Bank to issue 20,000,000 *l.*, and turned the country issues into notes convertible into gold, I think it would answer the purpose.

5458. Do you believe that the paper which you recommend would be on the average of the same value as the present Bank note which is convertible into gold?—I think that very shortly it would be of a higher value than our present standard. If any person had to be paid 10,000 *l.* 15 years hence, and had the option whether it should be paid in that way or in the standard of gold, I think he would exercise a wise discretion in choosing the paper.

5459. You think that the gold would depreciate in consequence of the increased supply from California and Australia?—I think it very probable.

5460. You would, I presume, be content, with Mr. Twells, to try the experiment with 14,500,000 *l.*?—Yes, I should be quite content to do that, but I think that the 20,000,000 *l.* would be required.

5461. With regard to the standard of value, do you attach much importance to the observations which you made with regard to gold not being the natural standard?—I do attach considerable importance to them upon principle; because I think it is acknowledged by all the authorities that gold is not the real standard of value; but that subsistence, or corn, or as others call it labour, is the real standard; labour is a kind of impalpable expression, it is not a commodity itself; but it is worked up into other commodities, therefore you can hardly call it the standard; it is better I think to call corn the standard of value.

5462. The value of any commodity in exchange depends more or less upon the amount of labour which is embodied in it?—Yes, upon the corn which is consumed during the time of labour.

5463. Then the value in the case of gold is dependent upon the amount of labour which is embodied in it?—Yes.

5464. Therefore, in that sense, labour is the standard, and gold is merely a measure

measure chosen by Parliament to express price?—There is a difference between gold and corn, in that respect, and what makes corn so superior, as a standard of value, to gold, is just this: gold might suddenly be discovered in large quantities without much labour being applied to that discovery, and it would then have a much less value, because there would not have been the labour to pay for the discovery in that shape; but corn you cannot increase in that way. Directly you want to increase corn you must begin to employ labour and to incur expense; therefore the production of corn has a necessary expense attached to it, which gives it its value.

5465. Therefore labour is the standard of the whole?—I do not object to labour; they mean the same thing; one is the wages of the other.

5466. How does the present system affect the labouring classes, generally speaking, according to your experience?—With regard to the building trade, I think, at the present time, it affects the labourer more from the uncertainty of employment than anything else; a man does not get such constant employment as he used to do. Instead of getting his six days' regular work in a week, he is frequently reduced to three and a half or four days, so that for two or three months of the year you may say that he has no wages at all.

5467. Do you attribute that to the perpetual oscillations we have had in the value of money, which create convulsions in the state of trade?—Yes, as regards the building trade; I think that the building trade would proceed very steadily but for those oscillations; there is a steady demand.

5468. You think that those oscillations are caused by the present law in regard to money?—Yes.

5469. Do you believe in the necessity of the periodical monetary convulsions to which we have been exposed for the last 35 or 40 years?—While the present monetary system lasts, I think they are unavoidable, but I think that they are quite unnecessary; that they would not occur unless they were made to occur.

5470. Is that because the base of the circulation is liable to exportation?—Yes; because the base of our legal tender is withdrawn.

5471. Do you attribute the various fluctuations and crises and panics which we have experienced since the war to the circumstance of our currency having been based upon a material so liable to exportation?—I do; I am quite of that opinion.

5472. If the base of our circulation were always stationary, how could those fluctuations occur?—I do not think that those fluctuations would occur.

5473. You say that you object to the fixed value of the pound; is it not essential to a proper measure of exchange that it should always have the same purchasing power, indirect taxation and supply and demand of commodities remaining the same?—I object to the pound being always 5 dwts. 3 grs. of gold, because, as a commodity, it cannot conform to that alteration in its purchasing power, which an addition to, or a diminution of, the indirect taxation of the country renders indispensable. It is clear, that if the prices of commodities are increased by additional taxation on them, the pound ought to be able to purchase less of them; and that if the prices of commodities are lowered by taxes being taken off them, the pound should purchase more. If, however, you make the provision that indirect taxation is unaltered, and that the supply and demand of commodities are the same, I would say that the purchasing power of your pound should be the same.

5474. Then you desire that the measure of value should be, as far as possible, always of equal purchasing power?—Yes; and, with the provisions I have mentioned, I do not want it, upon the average, to be altered from what the value of it has been during the last 40 years, since Sir Robert Peel passed his Bill of 1819. The pound has been during that time of about the following value; if you test it by the proper standard, namely, the value of corn, it has been equal to about three bushels of wheat. For the first 20 years, from 1820 to 1840, it was a little less than three bushels, wheat having been about 57 *s.* or 58 *s.* a quarter; since that time it has been exactly three bushels of wheat. For the last 15 years, wheat has averaged 53 *s.* 4 *d.* a quarter, which is 6 *s.* 8 *d.* a bushel, or three bushels to the pound sterling. Now that is the pound sterling at which we should aim, and I would arrange the monetary system so that the pound in circulation should be of the same value as it has been from 1819 to the present time, but not in gold; you may have a paper pound issued by the Government, under proper restrictions and regulations, by which you can fulfil contracts much better than by invariably paying 5 dwts. 3 grs. of gold.

Mr. *E. Capps.*

24 July 1857.

5475. Your object is, that if you enter into a contract of two or three years' duration, you shall be secure, as far as human means can secure you, that the measure of value shall be of the same value at the end of the time as at the beginning?—That is my object.

5476. And your objection to the present system is, if I understand you, that the value of the measure alters extremely during that period?—Yes.

5477. That at the commencement of 1844 or 1845, the value of the measure was two or three per cent., and in October 1847 the value was 10 per cent. for first-class bills, and probably was double for bills of an inferior character?—Yes.

5478. And your belief is, that if you had a measure of value of another character, limited in amount, those oscillations could not take place?—I think so.

5479. And that damage would not take place?—I think so.

5480. To what do you attribute panics?—I attribute panics to the base of our legal tender being withdrawn; and though we may get certainly a mercantile equivalent for the gold which we send abroad, the difference is that we let the commodity go which is our legal tender, and that though what we receive back is a mercantile equivalent in a certain sense, it is not the legal tender, it does not discharge debt or a sheriff's warrant; and it acts upon prices so that the export of 10,000,000 *l.* of that commodity may affect the value of 100,000,000 *l.* of other commodities.

5481. It affects all property throughout the kingdom?—Yes; and probably to four or five times the value of the mere exportation.

5482. Then your desire in the change which you recommend is not to depreciate the value of the pound, is it?—Not at all; I think it would enhance it most probably, that is, that the pound would procure you more of the necessaries and conveniences of life.

5483. You are not in favour of what is called inconvertible paper, in the sense of worthless paper, are you?—Not at all.

5484. How do you distinguish between your paper and the rags which have in other cases been issued?—Unless I know the principle I cannot say.

5485. Take the French assignats?—The French assignats were issued upon no principle at all, because no provision was made for their redemption. Even if all our present notes were convertible into gold and you cast that gold into a round ball and put it on the top of St. Paul's, where it was inaccessible, and could not redeem the notes, the notes would be as worthless as the French assignats, though they might be convertible into gold, and the gold might be there, but it would be unapproachable. If you issue the notes, there must be a process by which they shall be properly cancelled after having fulfilled their purpose.

5486. Supposing the world were disposed to distrust this limited paper which you recommend, and they demanded gold for the whole of it, do you think it would be better that the paper should be inconvertible, although the value of it in gold was placed in a ball at the top of the Bank of England?—If you are speaking of the foreign world around us, I think they have nothing at all to do with our paper; they look for their balances to be paid in gold or in silver. The foreigner does not care what we use among ourselves; all he looks at is the rate of exchange, when he makes a bargain, to see how much the English money he receives will return him in his own money or in any commodity.

5487-8. Do you think that the foreigner generally looks for payment in gold, or in commodities?—He looks at the money of the country with which he deals, and sees how much it will yield him. I should have no objection to the Government establishing an office at which notes should be immediately convertible at the market price.

5489. What is the foreigner's object in asking for gold?—He only takes it as a mode of estimating whether he is making a good bargain. All adverse exchanges may be paid in gold; I suppose that in the long run all foreign balances are paid in commodities, and that gold is generally exported only when they cannot be paid in any other way.

5490. Do you think that there would be any difficulty in settling foreign transactions under the system which you recommend?—Not the least in the world; I think it quite as convenient, and I will say more so, than the present system. How did it operate during the time of the Bank Restriction Act? The pound, which is 25 francs 20 cents in French money, went down as low as 19, 18, and 17 francs; but it made no difference to the foreigner, because he said, "I get in England 6 *l.* in money, where I formerly got 4 *l.*; but those 6 *l.* are worth 17 francs each, whereas the 4 *l.* were worth 25 francs 20 cents each."

5491. What

5491. What is the present exchange in France?—The par is twenty-five francs 20 cents.

5492. If the paper did not depreciate as regards gold, the rate of exchange would remain as before?—Yes; the course of exchange might vary, which would depend upon the excess of bills in one place over another; but that would be very small. That fluctuation would always be somewhere within 1 per cent., but the par of exchange must remain the same.

5493. I think you have stated that the working classes are prevented by the present system from sharing in the improvements to which they so much contribute?—I think they share to some extent, but not to the extent that they ought to do.

5494. In what way are they prevented in any degree?—I think we shall have to come to practical facts. I made some extracts some time ago, in which I think it was acknowledged, on all hands, that the working classes did not share as they should do. "Sir Robert Peel acquainted the House of Commons with his discovery, that while luxury was making considerable progress in the ranks above the lower, the condition of that most numerous rank was growing worse; poverty was proceeding down below, with as much rapidity as luxury was above." Those were Sir Robert Peel's own words.

5495. When was that?—About the year 1842. The "Times" again said, "Whoever may chance to be benefited by any change in the laws which regulate our commercial or economical relations, our foreign commerce or our home trade, certain it is, that the poor man, the labouring workman, whose exertions formed the staff and staple of the whole, never participates in the gain." I do not hold with that. I believe that the working population have received a share of the improvements, but not to the extent which they ought to have done. "And equally true it is, that wherever else the loss which these changes occasion may happen to fall, the workman is sure to be the party who at last has to pay the piper." Then if you read such works as Dr. Taylor's Tour in the Manufacturing Districts, or the Poor Law Commissioners' Report upon the Sanitary Condition of the Labouring Population, or even the Report of the Educational Conference which came to an end the other day, which report was written by the Bishop of Oxford, and which stated, that it was the extreme poverty of the people that prevented their attendance at the schools, to the extent which ought to exist, I think we must come to the conclusion, that the labouring population do not share, to the extent that they ought to do, in the increase of the comforts and necessaries of life.

5496. Assuming those to be facts, how do you connect them with the monetary system?—Because the monetary system has a tendency to drag down the remuneration of labour; the remuneration of the master in the first instance, and as he must get it from some one, he comes upon the labourer at last.

5497. How does it drag down the remuneration of the master?—It prevents his receiving any additional price for what he has laid out in taxation, and it must come out of some fund. If the labouring value of a certain commodity be 20*s.*, and there is an additional expense of taxation of 6*s.* or 7*s.*, and your money system prevents your having more than 20*s.* instead of 26*s.* for it, the 6*s.* must be got by the master by reducing the cost of that article; he must make the cost 14*s.* instead of 20*s.*, and he does it, I apprehend, by coming down upon the classes whom he employs.

5498. It has been stated before this Committee that the manufactures and commerce of the country could be carried on by means of a purely metallic currency; what is your opinion upon that point?—I think it is so extraordinary a notion, that I can hardly imagine that it would enter into the head of any sane man. I think you might as well go and try to carry the cottons of Manchester, the coals of Northumberland, and the iron of Staffordshire on the backs of pack-horses again, as the commodities were transferred formerly, as to try to carry on the multitudinous concerns of this country by a metallic currency. I have a little work here, from which I will read an extract of what General Harrison, the President of the United States, said upon that point in his inaugural address; General Harrison uses these words:—"Connected with this subject is the character of the currency. The idea of making it exclusively metallic, however well intended, appears to me to be fraught with more fatal consequences than any other scheme (having no relation to the personal rights of the citizens) that has ever been devised. If any single scheme could produce the effect of arresting

Mr. *E. Capps.*

24 July 1857.

at once that mutation of condition by which thousands of our most indigent fellow-citizens, by their industry and enterprise, are raised to the possession of wealth, that is one. If there is one measure better calculated than another to produce that state of things so much deprecated by all true republicans, by which the rich are daily adding to their hoards, and the poor sinking deeper into penury, it is an exclusive metallic currency. Or if there is a process by which the character of the country for generosity and nobleness of feeling may be destroyed by the great increase and necessary toleration of usury, it is an exclusive metallic currency." I think after that I need not add anything to it.

5499. That tallies very much with the extract from the speech of Sir Robert Peel, which you just now read?—It does very much.

5500. The system of currency at that time was supposed to oscillate precisely as a metallic currency would oscillate?—Sir Robert Peel had not passed his Bill of 1844 I think when he made those remarks.

5501. But that was in accordance with the principles of the Act of 1819?—Yes. The principles of the Act were the same, although the discretion of the Bank Directors might in some degree modify them.

5502. You have heard Mr. Chapman's evidence to day, have you not?—I was very busy copying the paper which I have read, so that I did not attend to it particularly; I heard some portion of it.

5503. You heard the latter part of his evidence as to the disastrous consequences which accrued to the mercantile classes when bullion was suddenly withdrawn?—Yes.

5504. Do you agree in the statements and facts which he adduced?—Quite so.

5505. Did you hear his suggestions as to a remedy?—I think he said, that a discretionary power should be lodged somewhere, though he would not exactly say where, by which an increase of the issues should be permitted under proper fences and guards; but I do not think he contemplated any change in the principles of the law, as regards the convertibility of the pound into 5 dwts. 3 grs. of gold.

5506. Did he not suggest also that there should be a graduated rate of interest proportioned to the amount of bullion in the Bank?—Yes, I heard that.

5507. Do you agree in his remedies?—I do not think that I am competent to speak upon that matter.

5508. Then upon the whole, if I understand your evidence, you think that the present system is a somewhat adroit scheme for bringing the profits of industry periodically into the usurer's bag?—I think so. I know that it has operated so in the building trade.

5509. Mr. *Tite.*] Is your business in London, or in the country?—It has been principally in London; I am not now in business on my own account; but I pursue the professional part, and have a standing engagement with a house of business.

5510. What are they?—They are corrugated iron manufacturers, and constructors of buildings principally of corrugated iron.

5511. Were you a builder in London?—I was.

5512. Up to what period?—Up to the year 1848.

5513. Were you acquainted with the leading builders on a large scale, such as Mr. Thomas Cubitt, Mr. Kelk and others?—I know Mr. Kelk and Sir Samuel Peto; I did not know Mr. Cubitt.

5514. You have spoken of change in the system of building?—Yes.

5515. Does not your experience carry you back to the same system from the time when Burton began to build Burton-crescent and Russell-square?—I think that must have been before the time to which I allude; I have no recollection of those buildings being erected.

5516. Do you know the fact of Burton building St. Leonard's-on-Sea?—I have heard so; I know Mr. Crake, who also built a considerable portion of St. Leonard's.

5517. I am rather referring to the building of St. Leonard's as leading you back to the time more than 50 years ago, when Mr. Burton was a leading speculative builder in London; was he a man of large fortune?—I cannot say at all.

5518. Do you know whether Mr. Kelk was a man of fortune and reputation?—I should imagine he was; he has been carrying on an extensive business.

5519. You know nothing, I suppose, of the Messrs. Cubitt and their fortune?—I know nothing of the circumstances of any one of them.

5520. Your remarks seemed to lead a little to the desirableness of encouraging speculators in building who had not much capital, and if I understood you correctly, you gave an instance that a man might take a speculation, undertaking to spend 50,000 *l.* in building, having only an actual capital of 1,500 *l.*?—I say, that so far as that is the case, it is going back from a sound and prudent system. I said, that under the old monetary system, building was confined to a very moderate and prudent extent by men whose main reliance was business upon orders, and that they had three or four houses on the stocks to keep their men employed; but that that system would not answer at the present day at all, for a man could not get a living at it. That he must be a man almost of reckless daring, and must take a large plot of ground, which would scarcely be considered prudent upon commercial principles.

5521. Granting that the system has changed, which I am not disposed to concede, do you think that it is right, and prudent, and wise for a man to venture upon a large speculation of 50,000 *l.*, having so small a capital as 1,500 *l.*?—I do not think it is prudent. I cannot justify the thing upon the soundness of it; but I can justify the builder in doing it, because he is shut up to it; he can do nothing else; he has to get his living by the business, and he must make it in the way which is open to him by the law.

5522. Is not the case this, that if the thing goes right he will get an advantage by it, but if not he will break his back?—Yes.

5523. Can you imagine anything so unbecoming and improper as that?—I think that proper legislative enactments would have a tendency to discourage such speculations, that they would turn building into legitimate channels, and make men of comparatively small means carry on business in a prudent manner.

5524. In what way?—I think that the profits of general business have been almost annihilated. I have myself put in tenders for works at five per cent. profit, calculating to pay ready money for everything, works which would take me two years to execute, and those contracts have been taken at 20 per cent. under my prices, which would be 15 per cent. under prime cost.

5525. That cannot be attributed to the currency; a man might do an imprudent thing, or it might be a prudent thing, by his having greater means or a larger business than you; but do you think that the currency has anything to do with such a state of things of a speculative character?—I think so; I think that the monetary regulations of 1819 and 1844 have a tendency to produce that result; that they throw business into the hands of a few men who, either by superior acuteness or connexion, have command of capital which they can use to the detriment of men who would be glad to go on in a quiet way, but cannot.

5526. In what way do you think that Sir Robert Peel's Act has to do with that?—I think that it has lowered the profits of general business; that you cannot get, ordinarily speaking, a sufficient profit without carrying out such speculations as I have mentioned.

5527. Then you think that that has been the effect of that Act?—I think so.

5528. Mr. *Puller.*] You propose an inconvertible currency; what would your form of note be?—That is a mere matter of detail; but it would not be a promise to pay five pennyweights three grains of gold, certainly.

5529. What would it be?—You might put upon it, if you liked, "Value One Pound."

5530. What would that mean?—That would be a note which would give you three bushels of wheat, upon the average.

5531. It would not at any one time give you three bushels of wheat?—No; wheat is a thing which fluctuates from season to season, so that I could not say that this year it would actually give you three bushels, or that next year it would actually give you three bushels, nor does the present pound do so; sometimes it gives two bushels of wheat, and sometimes four bushels.

5532. What would it give me?—It would give you, of any commodity, as much as the pound of five pennyweights three grains of gold does.

5533. That brings me back to gold as a standard?—It would give you what you chose to purchase with it.

Mr. *E. Capps.*

24 July 1857.

5534. Mr. *Cayley.*] If you had your 20,000,000*l.* or 14,500,000*l.* of notes upon securities, issued by the Bank of England, although inconvertible (except into taxes or in the last resort into those securities), do you believe that that issue would not buy you as many commodities as the present 14,000,000*l.* issued upon securities?—I think it would buy you more, but I do not think that 14,000,000*l.* alone is enough.

5535. Then it would not be of less value, but of more value?—I think it would be of more value if you had merely 14,000,000*l.* of issue; if you brought it to 20,000,000*l.* of issue, I think you would have a pound of equal value with your five pennyweights and three grains of gold.

5536. Whether that 14,000,000*l.* was divided into one pound notes or five pound notes would make no difference, in your view?—No.

5537. Mr. *Puller.*] What would give any value at all to this piece of paper with "One pound" written upon it?—That would depend on the manner in which it was issued; if issued by the Government it might be receivable in payment of taxes.

5538. *Chairman.*] Did you not state that those notes which you propose might sometimes be of more value than gold?—I think very likely they would be.

5539. Do you think that this case would ever occur, that one of these 5*l.* inconvertible notes would be worth 5½ sovereigns?—I think it is very probable.

5540. What state of things do you think would produce that result?—I think that if a continued influx of gold comes in from California and Australia, the paper pound, limited to the amount which I have mentioned, will bear a premium most probably in three or four years' time in comparison with the gold pound of five pennyweights three grains. General Thompson, a few years ago, when the gold mines were first discovered to a great extent in California and Australia, gave notice of a series of resolutions which he was going to bring before The House. He thought that the gold would shortly so fall in value that the pound of five pennyweights three grains would no longer fairly pay the national creditor his dividends; and he sought to establish the principle of corn being the standard of value, and to establish the principle of a corn rent, by which, when wheat was under a certain price per quarter, paper should be issued to bring it up.

APPENDIX AND INDEX.

Ordered, by The House of Commons, *to be Printed,*
30 *July* 1857.

APPENDIX - - - - - - - - - - p. 1
INDEX - - - - - - - - - - - p. 363

LIST OF APPENDIX.

Appendix, No. 1.

Remarks and Opinions of the Governors and some of the Directors of the Bank of England on the Bank Charter Act of 1844, and the Irish and Scotch Banking Acts of 1845 - - - p. 1

Letter from Thomson Hankey, Esq., to the Right Hon. Sir G. C. Lewis, Bart., M.P. - p. 22

Appendix, No. 2.

Appendix, No. 16, to Report from the Select Committee on Commercial Distress, 1848.—Account of the Average Circulation of Twenty-one Days' and Seven Days' Bills, in each Year from 1832 to 1847; distinguishing the Amount from each Branch Bank - - - - - p. 24

Account of the Average Circulation of Seven Days' and other Bills in each Year, from 1848 to 1856, both inclusive; distinguishing the Amount from each Branch (in continuation of Appendix, No. 16, to Report from the Select Committee on Commercial Distress, 1848) - p. 25

Appendix, No. 3.

Appendix, No. 18, to Report from the Select Committee on Commercial Distress, 1848.—Account of the Average Circulation of Branch Bank Notes in each Year from 1832 to 1847, both inclusive; distinguishing the Amount from each Branch Bank - - - - - - p. 26

Account of the Average Circulation of Branch Bank Notes in each Year, from 1848 to 1856, both inclusive; distinguishing the Amount from each Branch Bank (in continuation of Appendix, No. 18, to Report from the Select Committee on Commercial Distress, 1848) - - p. 27

Appendix, No. 4.

Appendix, No. 17, to Report from the Select Committee on Commercial Distress, 1848.—Weekly Statement of the Circulation of Twenty-one and Seven Days' Bills, during the Year 1847; distinguishing the Amount from each Branch Bank - - - - - - - p. 28

Weekly Statement of the Circulation of Seven Days' and Other Bills, during the Year 1856; distinguishing the Amount from each Branch (in continuation of Appendix, No. 17, to the Report from the Select Committee on Commercial Distress, 1848) - - - - - - p. 30

Appendix, No. 5.

Appendix, No. 19, to Report from the Select Committee on Commercial Distress, 1848.—Weekly Statement of the Circulation of Branch Bank Notes during the Year 1847; distinguishing the Amount from each Branch Bank - - - - - - - - - - - p. 32

Weekly Statement of the Circulation of Branch Bank Notes during the Year 1856; distinguishing the Amount from each Branch Bank (in continuation of Appendix, No. 19, to the Report from the Select Committee on Commercial Distress, 1848) - - - - - - - p. 34

Appendix, No. 6.

Appendix, No. 14, to Report from the Select Committee on Commercial Distress, 1848.—Return of the several Rates at which the Bank of England has advanced Money on Loan, with the Date at which each such Rate has been established, and the Period during which it has prevailed, and the Amount of Money advanced under each such Rate, from the 1st of January 1844 to the 1st of January 1848 - - - - - - - - - - - - - p. 36

Return of the several Rates at which the Bank of England has advanced Money on Loan, with the Date at which each such Rate has been established, and the Period during which it has prevailed, and the Amount of Money advanced under each such Rate (in continuation of Appendix, No. 14, to the Report from the Select Committee on Commercial Distress, 1848) - - - p. 44

Return of the Highest and Lowest Rates at which the Bank has advanced Money on Loan or Discount, with the Date at which each such Rate has been established, and the Period during which it has prevailed, and the Amount of Money advanced under each such Rate, from the 1st January 1844 to the latest Period to which the same can be made up - - - - p. 62

Appendix, No. 7.

Return of the several Rates at which the Bank has discounted Bills of Exchange, together with the Weekly Amount of Money Discounted under each such Rate, from the Week ending 1st January 1848 to the Week ending 27th December 1856, both inclusive (in continuation of Appendix, No. 14, to the Report from the Select Committee on Commercial Distress, 1848) p. 68

Appendix, No. 8.

Appendix, No. 21, to Report from Select Committee on Commercial Distress, 1848.—Monthly Statement of Bullion Bought and Sold by the Bank of England, distinguishing Gold from Silver Bullion, from 1 January 1832 to 31 December 1847 - - - - - - - - p. 82

Monthly Statement of Bullion Bought and Sold by the Bank of England, distinguishing Gold from Silver Bullion, from 1 January 1848 to 31 December 1856 (in continuation of Appendix, No. 21, to the Report from the Select Committee on Commercial Distress, 1848) - - p. 86

Appendix, No. 9.

Return of any Banks, being Banks of Issue previously to the passing of the Act 7 & 8 Vict. c. 32, which have ceased to Issue their own Notes, and of the Amount of Circulation of such Banks respectively; showing the Amount on which the Governor and Company of the Bank of England founded a Memorial, dated 26 November 1855, and on which Permission was granted to them to add to their Issue of Notes, under the Fifth Section of the Act 7 & 8 Vict. c. 32 - p. 88

Appendix, No. 10.

Return of the Lowest Amount of Bullion in the Bank of England, in the Years 1825, 1837, 1839, 1847, and 1856 - - - - - - - - - - - - - - p. 89

Appendix, No. 11.

Appendix, No. 4, to the Report from the Select Committee on Commercial Distress, 1848.—Account of the Amount of the Notes of the Bank of England in Circulation, distinguishing those under 5 *l.*; of the Amount of all Deposits, and of the Amount of all Securities, and of the Amount of all Bullion, held by the Bank of England on the 28th day of February and the 31st day of August in each Year, from the Year 1778 to the 31st day of August 1847 inclusive p. 90

Account of the Amount of the Notes of the Bank of England in Circulation, of the Amount of all Deposits, and of the Amount of all Securities, and of the Amount of all Bullion held by the Bank of England, on the 28th day of February and the 31st day of August in each Year, from the Year 1848 to the 31st day of August 1856 inclusive (in continuation of the Return, No. 4, in the Appendix to the Report of the Select Committee on Commercial Distress, 1848) - p. 93

Appendix, No. 12.

Appendix, No. 5, to Report from Select Committee on Commercial Distress, 1848.—Account of the Notes, Securities, Bullion, &c., of the Bank of England, as published Weekly in the "Gazette," since the passing of the Act 7 & 8 Vict. c. 32, from 31st August 1844 down to the latest Period to which the same can be made up - - - - - - - - - p. 94

Account of Notes, Securities, Bullion, &c., of the Bank of England, as published Weekly in the "Gazette," according to the Act 7 & 8 Vict. c. 32 (in continuation of Appendix, No. 5, to the Report from the Select Committee on Commercial Distress, 1848) - - - - p. 100

Appendix, No. 13.

Appendix, No. 6, to Report from Select Committee on Commercial Distress, 1848.—Account of Bank Notes of the Bank of England held by the Public, and of Bank Notes of the Bank of England held in Reserve by the Bank of England; also, of the Rates of Exchange between London, Paris, Hamburgh, and Amsterdam; also, of the Total Amount of Bullion; also, of the Minimum Rate of Interest charged by the Bank of England; also, of the Total Amount of Bills Discounted; also, of the Total Amount of Temporary Advances; also, of the Total Amount of Deposits, including the Balances on the account of the Exchequer, and the Balances held on account of the London Bankers, from the last Day of each Week from the 7th September 1844 to the latest Date of the present Year, both Days inclusive - - - - - p. 114

Account of Bank Notes of the Bank of England held by the Public, and of Bank Notes of the Bank of England held in Reserve by the Bank of England; also the Rates of Exchange between London, Paris, Hamburgh, and Amsterdam; also, of the Total Amount of Bullion; also, of the Minimum Rate of Interest charged by the Bank of England; also, of the Total Amount of Bills Discounted; also, of the Total Amount of Temporary Advances; also, of the Total Amount of Deposits, including the Balances on the account of the Exchequer, and the Balances held on account of the London Bankers, from the last Day of each Week from the 1st of January 1848 to the 27th December 1856, both Days inclusive (in continuation of Appendix, No. 6, to the Report from the Select Committee on Commercial Distress, 1848) - - - - - p. 120

Appendix, No. 14.

Account of Bank Notes of the Bank of England held by the Public, and of Bank Notes of the Bank of England held in Reserve by the Bank of England; also, of the Total Amount of Bullion; also, of Government Securities, and other Securities; also, of Public Deposits, and other Deposits; and of the Minimum Rate of Interest charged by the Bank of England, from the last Day of each Week from the 7th September 1844 to the 27th December 1856 - p. 136

Appendix, No. 15.

Return of the Circulation of Notes of the Bank of England, of Private and Joint Stock Banks in England, Scotland, and Ireland, and the Total thereof; together with the Amount of Bullion in the Bank of England in each Month, from 1834 to the present Time - - - - p. 148

Appendix, No. 16.

Account of the Aggregate Daily Circulation of Banks of Issue in England and Wales, from the 14th October 1844 to the 9th May 1857 - - - - - - - - - p. 153

Appendix, No. 17.

Return showing the authorised Issues of the Notes of the Private and Joint Stock Banks in England and Wales, and the actual Amount Issued; also, the authorised Issues of the Banks in Scotland and Ireland, the actual Amounts Issued, and the Amounts of Bullion held by these Banks respectively, in each Week since the passing of the Acts of the 7 & 8 Vict. c. 32, and 8 & 9 Vict. c. 37 & 38 - - - - - - - - - - - - - - p. 182

Appendix, No. 18.

Account of the Aggregate Weekly Circulation of the Notes of Banks of Issue in Scotland and Ireland, distinguishing those of 5 *l.* and upwards, and those under 5 *l.*, and showing the Total Amount in Scotland and Ireland respectively, with the Amount of Bullion held, from the 13th December 1845 to the 9th May 1857 - - - - - - - - - - p. 204

Appendix, No. 19.

Account of the Aggregate Weekly Circulation of Bank Notes in the United Kingdom, distinguishing those of the Bank of England in the hands of the Public, and the Issues of other Banks in England, Scotland, and Ireland, from 1844 to the present Time - - - p. 214

Appendix, No. 20.

Account of the Amount of the Notes of the Bank of England in Circulation, of the Amount of all Deposits, of the Amount of all Securities, and of the Amount of all Bullion, held by the Bank of England on the 28th February 1857 (in continuation of the Account, No. 4, in the Appendix to the Report of the Secret Committee on Commercial Distress, 1848) - p. 233

Appendix, No. 21.

Return of the Number of Banks of Issue and of Non-Issue that have been Established in the Three Divisions of the United Kingdom, in each Year from 1819 to the present Time, distinguishing Joint Stock Banks from Private Banks; of the Number which have Relinquished Business in each Year, again distinguishing Banks of Issue and of Non-Issue, Private Banks, and Joint Stock Banks; and, of the Number which have Relinquished Business in consequence of Failure and other Causes:

England and Wales - - - - - - - - - - - - - p. 234

Scotland - - - - - - - - - - - - - - - p. 235

Return of the Names of the Banks that existed in Scotland in the Years 1819, 1830, 1844, and 1857, respectively, with the Number of Branch Banks belonging to each - - - - - - - - - - - - - - p. 236

Ireland - - - - - - - - - - - - - - - p. 237

Account of the Number of Private Banks of Issue in England at the Time of passing the Act of 1844, and whose Issues were fixed by that Act; also the Number which still continue in existence as Banks of Issue, and showing what Number have Ceased to Issue by compounding with the Bank to use Bank of England Notes, and the Number that have Ceased by Failing - - - - - - - - - - - - - - - - p. 238

Account of the Number of Joint Stock Banks of Issue in England at the Time of passing the Act of 1844, and whose Issues were fixed by that Act; also the Number which still continue in existence as Banks of Issue, and showing what Number have Ceased to Issue by compounding with the Bank to use Bank of England Notes, and the Number that have Ceased by Failing - - - - - - - - - - - - - - - - p. 238

Appendix, No. 21—*continued.*

Account of the Number of Banks of Issue in Scotland at the Time of the passing of the Act of 1845, and whose Issues were fixed by that Act; also the Number which still continue in existence as Banks of Issue, and showing the Number that have Ceased - - - p. 238

Account of the Number of Banks of Issue in Ireland at the Time of the passing of the Act of 1845, and whose Issues were fixed by that Act; also the Number which still continue in existence as Banks of Issue, and showing the Number that have Ceased to Issue by Contract with the Bank of Ireland, and the Number that have Ceased by Failing - - - p. 238

Appendix, No. 22.

Account of Banks that have exceeded their limited Issues, and of the Fines imposed, since the passing of the Act 7 & 8 Vict. c. 32, to the present Time - - - - - - - p. 239

Appendix, No. 23.

Banks of Issue that have Failed since 1844; the Dividends which they have paid (as far as ascertained); the Aggregate Amount of those Dividends; the Total Amount of Notes on which such Dividends were paid; and the Total Amount of Loss incurred by the Public from the issue of such Notes (as far as ascertained) - - - - - - - - - - p. 240

Appendix, No. 24.

Account of the Issue and Banking Departments of the Bank of England, pursuant to the Act 7 & 8 Vict. c. 32, for the Week ending on Saturday the 9th day of May 1857 - - - p. 241

Appendix, No. 25.

Return of all Purchases and Sales of Public Stocks or Exchequer Bills severally made by the Bank of England in each Week since the Year 1847, and the Rates of such Purchases and Sales (in continuation of the Return, No. 34, in the Appendix to the Report of the Secret Committee on Commercial Distress, 1848) - - - - - - - - - - - - - p. 242

Appendix, No. 26.

Account, showing the Advances made on Exchequer Bills by the Bank of England for the Quarterly Charge of the Consolidated Fund, and the Weekly Repayments of the same, from April 1848 to the latest Period to which the same can be made up (in continuation of the Return, No. 11, in the Appendix to the Report of the Secret Committee on Commercial Distress, 1848) - - - - - - - - - - - - - - - - p. 278

Appendix, No. 27.

Return of the Amount advanced for Temporary Loans upon Exchequer Bills, Bills of Exchange, India Bonds, &c., in each Quarter, and the Rate of Interest paid thereon (in continuation of Appendix, No. 9, to the Report of the Select Committee on Commercial Distress, 1848) p. 283

Appendix, No. 28.

Return of the Highest and Lowest Rate of Interest charged by the Bank of England on all Loans or Discounts in each Month, from 1st January 1848 to 31st December 1856, distinguishing Loans on Security of Real Estate, Loans on Stock or Public Securities, and the Discount of Commercial Paper (in continuation of Appendix, No. 13, to the Report from the Select Committee on Commercial Distress, 1848) - - - - - - - - - - p. 284

Appendix, No. 29.

Appendix, No. 25, to Report from Select Committee on Commercial Distress, 1848.—Return of all Loans to Canal, Dock, or other such Public Companies, or on the Deposit of the Securities of such Companies; stating the Rate of Interest charged on each Call of Loan; from the 1st January 1832 to 1847 - - - - - - - - - - - - - - p. 286

Return of all Loans to Canal, Dock, or other such Public Companies, or on the Deposit of Securities of such Companies; stating the Rate of Interest charged (in continuation of Appendix, No. 36, to the Report of the Select Committee on Commercial Distress, 1848) - - p. 286

Appendix, No. 30.

Appendix, No. 35, to the Report from the Select Committee on Commercial Distress, 1848.—Return of all Loans to Railroad Companies, or on the Deposit of Railroad Stock or Bonds, also of the Purchase of any such Stock or Bonds, stating the Rate of Interest charged in each case of Loan, from the Period of the first Transaction of this Description to 10 August 1846 p. 227

Return of all Railroad Debentures Purchased by the Bank of England from the Year 1848 to 1856 inclusive (in continuation of Appendix, No. 35, to the Report from the Select Committee on Commercial Distress, 1848) - - - - - - - - - - - - - - p. 287

Appendix, No. 31.

Monthly Statement of the Gold Coin sent to and received from the Branches of the Bank of England, from the 1st January 1848 to the 31st December 1856 (in continuation of Appendix, No. 20, to the Report from the Select Committee on Commercial Distress, 1848) - p. 289

Appendix, No. 32.

Table (A.)—Showing the Amount of Bullion in the Bank of England, the Market Rate of Discount for good Bills of Exchange, and the Prices of Fifteen of the Principal Articles of Commerce at the beginning of the Months of March, June, September, and December, from March 1834 to December 1843 - - - - - - - - - - - - - p. 290

Petition of Merchants, Manufacturers, Shipowners, &c., of the city of Glasgow - - p. 361

APPENDIX.

Appendix, No. 1.

(*Confidential.*)

REMARKS and OPINIONS of the Governors and some of the Directors of the Bank of *England* on the Bank Charter Act of 1844, and the *Irish* and *Scotch* Banking Acts of 1845. Appendix, No. 1.

Questions proposed.

1. Have you any suggestion to offer with reference to the operation of the Act of 1844?
2. Would you recommend its renewal, as it stands, for another term?
3. If not, what amendments to you seem advisable?

Note.—I would beg of you to extend your observations to the Irish and Scotch Acts of 1845.

The Governor of the Bank of *England* to the Right hon. the Chancellor of the Exchequer.

My dear Sir George, Bank of England, 10 November 1856.

I HAVE the pleasure to forward to you copies of the opinions of several of my colleagues, upon the operation of the Banking Acts of 1844 and 1845, in reply to the desire expressed in your letter to me of the 24th September last. *T. M. Weguelin*, Esq.

In adding my own opinion, I am constrained to appeal to your indulgence if my remarks should acquire some length, though it will be my endeavour to indicate rather the heads of argument than to illustrate or develop them.

It appears to me that much of the opposition to the Act of 1844 has been directed rather against the reasoning upon which the Act was founded and by which it has been defended, than against the provisions of the Act itself. I am speaking, of course, of those who consider some limit beyond simple convertibility of the note as necessary.

If I consider the plan enunciated by Mr. Palmer, or the opinions of Mr. Tooke, I am led to the conclusion that they involve the idea of some such limit, although, in my opinion, not of so effective application as that established by the Act of 1844.

Mr. Palmer's plan, you may recollect, consisted in maintaining an average amount of banking securities, independent of the capital of the Bank, and allowing the bullion to fluctuate according to the wants of commerce.

Mr. Tooke, apparently, would place the limit, or rather, the binding obligation, upon the amount of bullion to be maintained.

Now, I think the limitation of the Act of 1844 is easier of application, acts in a more constant and regular manner by a clearer distinction of the liabilities of the Bank; and, as regards Mr. Palmer's plan, is felt at an earlier period of a drain of the precious metals.

The restriction placed upon the country issuers has, I think, operated beneficially in maintaining the credit of that portion of the circulation; the exceptions in comparison with former periods having been unimportant.

But, on the other hand, the Act, and more especially the reasoning of its supporters, encourage a dangerous theory that the Bank of England in its banking department may, in all respects, act as would a private banker in the management of his deposits. It thus favours the competition with private money-lenders, which in periods of large deposits is apt to produce an unwarranted inflation of credit.

In periods of a drain of bullion, it makes no distinction as to the causes of the drain. Its theory is, that the Bank should be governed in its action by the rate of interest out of doors, and that whenever it has the power to raise the rate of discount it should use it. But here no distinction is drawn between a drain for exports, which is the consequence of an inflation of credit, and a drain for the internal accommodation of the country, which may be caused by discredit, or which may merely represent the natural oscillation of the currency.

Appendix, No. 1.

T. M. Weguelin, Esq.

These two causes, in my opinion, require opposite treatment.

The limitation of issue, which in the former case is salutary by forcing the Bank to defend its treasure by action on the rate of interest or restriction in the discount of bills, in the latter case of internal discredit, would add to and intensify the difficulty; or, in the case of the natural oscillation of the currency, leads to erroneous conclusions in the public mind as to the true position of the bank in times of difficulty.

Again, there are times and circumstances in the external demand for treasure which may render the maintenance of the limit impossible; circumstances, I mean, over which no action of the Bank can exercise control. I allude to Government loans in a state of war. The Government is enabled to borrow on its stock to an amount, and at a rate of interest, which has no affinity to the rate of discount which the Bank may think it necessary to demand. Having made its contract for the loan, it can use the proceeds by exporting treasure for the payment of troops on foreign service, wholly irrespective of any action on the part of the Bank.

Now with regard to the oscillation of the internal circulation of the country, I may notice that there is, periodically, a demand for currency from the Scotch and Irish banks, which, whilst it produces a most sensible effect upon the Bank of England reserve, is uncontrollable by any action of the Bank. At certain periods of the year, especially after harvest, the demand for currency commonly greatly exceeds the authorised issue; and as the excess must be issued on gold deposited in certain specified places, that gold is withdrawn from the Bank reserve, to be again restored to it when the reflux of the currency of the Scotch and Irish banks takes place, which is usually in the months of December to March. The Scotch banks very generally exceed their authorised aggregate issue; but with the Irish banks, although the aggregate issue is not usually exceeded, yet it often happens that some are in excess, whilst others are under the authorised amount. But as each bank has to provide for its own excess, the demand on the London bullion reserve is as great as if the whole Irish circulation had gone beyond its limit.

The quarterly oscillation of the English circulation amounts to from 2 000,000 *l.* to 2,500,000 *l.* in notes, and probably from 500,000 *l.* to 800,000 *l.* in coin. There is also noticeable a weekly vibration of both notes and coin. These effects are produced by the payment of dividends, salaries, wages, &c., and the receipt on the other hand for revenue and the setting free of circulation by the gradual disbursements of the public.

I notice this ebb and flow of the circulation, to show how the proportion of bullion which guarantees the active circulation may vary. For instance :—The active circulation at one time of the quarter is 18,000,000 *l.*, at another 20,500,000 *l.*: as 14,500,000 *l.* are issued on securities, it follows that 3,500,000 *l.* is the bullion guarantee of 18,000,000 *l.*, and 6,000,000 *l.* the bullion guarantee of 20,500,000 *l.*, or a varying proportion of 19 and 29 per cent.

The banking reserve is acted upon disadvantageously in similar proportions; as, practically speaking, it must be understood that the banking reserve is the balance of the total issue, after satisfying the wants of the public for circulation.

There is a practical embarrassment in the working of the present Act, during periods of declining rates of interest, caused by the agreements with the bankers named in the Schedule of the Act, and by the duty of the Bank towards its private customers. Instead of an allowance of 1 per cent. per annum on the amount of abandoned circulation, the Bank agrees to discount certain specified amounts at 1 per cent. below the Bank's minimum rate. It seems equitable, therefore, that the Bank should not fix its minimum materially above the value of money out of doors. But I think this leads to an unwholesome competition with other lenders.

These or similar defects would probably be incidental to any measure of limitation beyond mere convertibility. Some of them might be removed by absorbing all other issues of bank notes, but the effect of this would not in my opinion be in all cases a substitution of Bank of England notes for country circulation. Much capital would thereby be lost, that is, actual gold and silver must be substituted for notes now used in internal transactions.

Irrespective of theories upon the subject of the currency, what should be the policy of the Legislature with regard to it?

The receipts and payments by Government would undoubtedly maintain the credit of a large amount of bank notes apart from, and independent of, a metallic basis. Experience alone could show what this amount might safely be, supposing there were but a single issuer.

In the present composite structure of the currency, this may be said to be indicated by the 14,500,000 *l.* issued on securities so far as the Bank of England is concerned.

It cannot be the policy of the Legislature to encourage the issue of bank notes to the utmost extent that the credit of the issuer would keep in circulation. It would be most desirable, even if there were one sole issuer, that a metallic reserve should be maintained in the country, not alone for the purposes of internal credit, but for occasions of sudden exigencies, which might occasion and demand an external drain of the precious metals.

If this would be desirable when the Government should have all the profit of the circulation, it is still more so when the profit is distributed amongst private undertakings.

With this view it should be the policy of the Legislature to encourage the circulation of coin for small payments, and prohibit the use of 1 *l.* and 2 *l.* notes. This would be a reserve in times of extreme difficulty.

It may be said that this argument favours the limitation of a paper circulation to its exact equivalent in bullion. But besides that this would be an unnecessary sacrifice of capital, it must

must be considered that the complete disuse of a credit circulation would be a serious bar to its introduction in times of emergency, causing alarm, and thereby adding to the difficulty rather than relieving it. Two questions here suggest themselves :—

1. Would it be desirable that the circulation should be issued by the Government? and

2. Should the functions of issue be separated from those of banking, by placing the former department in the hands of special Commissioners?

1st. I think that the Government should have nothing to do with the issue of bank notes, as it would be subjected to all the clamour and unpopularity which are engendered by financial and monetary crises. The circulation would not be free from political influence, for reasons of State might be pleaded for measures which would endanger the value and stability of property: and experience has shown that no Government hitherto has possessed this power that has not abused it. In times of emergency, discredit of the Government paper would enormously add to the difficulty.

Some of these reasons apply to the separation of the Issue Department from the Bank of England, and there are other reasons which render this inexpedient.

It would more apparently than at present reduce the Bank of England to the level of an ordinary Joint Stock Bank; and thus the strength which is derived from the Bank's intimate connection with the Government would be lost.

This connection is assumed by the public to exist notwithstanding the enactment of 1844, the theory of which denies all value to this connection; and I think it is necessary to maintain this impression, so long as it is deemed advisable to publish the weekly accounts of the Liabilities and Assets of the Bank. The separation would, moreover, relieve the Bank of some portion of its responsibility, and would be an inducement to manage its banking business more nearly on the principle of an ordinary joint stock bank, investing its deposits much more closely, and shutting its doors when it was not convenient to discount.

By this the distinctive character of the Bank of England, as a bank of reserve, would be lost; and it is questionable whether a monied corporation with so large a capital as the Bank of England, relieved from such responsibility, and deprived of such character, might not have a dangerous influence on the money market.

If the Act be continued in its present shape, there would remain to be discussed the questions, whether the present amount issued upon securities is correctly fixed at 14,500,000 *l.*? and secondly, whether there should be a machinery provided for the relaxation of the Act in cases of emergency or discredit?

On the first question, arguing on the principle of the Act, that a certain proportion of the active circulation should be issued in gold, I am inclined to think the amount should not be increased.

The circulation in the hands of the public varies from 18,000,000 *l.* to 21,000,000 *l.*

At the lowest point, the Act would require 3,500,000 *l.*; at the highest, 6,500,000 *l.*, in gold, as a basis to ensure convertibility.

To raise the issue on securities to 16,000,000 *l.*, as proposed by Mr. Norman, would reduce these bases respectively to 2,000,000 *l.* and 5,000,000 *l.*, which appears to me too low a proportion.

Secondly, as to the power of relaxation. This point was fully considered by the framers of the Act. To provide machinery for the purpose of relaxing, it was thought, would encourage an undue reliance upon this exceptional means of relief, and that it was the function of the Government to intervene in such a case, and of the Government alone, under its official responsibility.

This power having been once exercised already, there is no cause to apprehend a panic, such as occurred in 1847. The public believe that it would be exercised again under similar circumstances.

Some advantages might be derived, possibly, from an enactment, laying down rules how such power should be exercised.

Having considered the question fully, as regards the limitation placed upon the power of issue, a large portion of the subject has not been adverted to, which relates to the management of the Bank of England, and, by implication, of other banks, as a bank of deposit.

And here the first anomaly that presents itself, and which is at the root of all the difficulty to which the Bank is subjected under any system of restriction, is that the Bank is expected to open its doors to all comers, and make advances to any amount, provided only good banking security, such as unexceptionable bills of exchange, are tendered to it.

There are two ways of meeting the difficulty caused by this anomaly.

One is by successively raising the rate of interest, which, it is assumed, will eventually raise the value of money above its value abroad, and thus cause it to flow to this country; the other is, by placing restriction upon the term for which the Bank makes advances, and thus acting directly on the foreign exchanges by discouraging the negotiation of any but bills at short date upon England.

The Bank has of late, to a certain extent, combined these modes of action.

It is not here the place to enter upon arguments *pro* and *con* upon this subject; and I therefore pass on to the question as to the proportion of reserve which the Bank should endeavour to maintain in its banking department.

This is notoriously very much higher than any private banker deems necessary in the management of his deposits; and, according to the usual practice of the Bank, varies in times of scarcity of money, from one-third to one-fourth the amount of its deposits.

But if this be contrasted with the reserves kept, for instance, by the joint stock banks, a new and hitherto little considered source of danger to the credit of the country will present itself.

Appendix, No. 1.

T. M. Weguelin, Esq.

itself. The joint stock banks of London, judging by their published accounts, have deposits to the amount of 30,000,000 *l.* Their capital is not more than 3,000,000 *l.*, and they have on an average 31,000,000 *l.* invested in one kind of security or another, leaving only 2,000,000 *l.* of reserve against all this mass of liabilities.

It is impossible to foresee the consequences of the failure of one of these large establishments; and it is a branch of the subject which, in my opinion, more pressingly requires the attention of Parliament than any alteration in the Banking Acts of 1844 and 1845.

I remain, &c.
(signed) *T. M. Weguelin.*

Sheffield Neave, Esq.

S. Neave, Esq.

I CONSIDER that the Bill of 1844 has been productive of great advantages, and has fully answered the main purposes for which it was devised, viz., the securing the convertibility of the note circulation generally; the fixing certain impassable limits to all issues, whereby insolvency has been so much less frequent; the following out of the only true principle, that the fluctuations of the currency should correspond with and be to the like amount that they would have been had it been purely metallic.

With the exception of security being taken of the country bankers, the effect is the same as if there were but one bank of issue.

It has been objected, however, that these desirable objects have been attended with great drawbacks; and the crisis of 1847 has been pointed at in proof that some relaxation is, under moments of great pressure, absolutely necessary. The letter permitting further issues is adduced to show that the strict provisions of the Bill were unendurable.

Whilst I am constrained to admit a part of this assertion, I am desirous of separating it from the general argument; and also to show, as regards other considerations, that what had weight at that time has to a great degree lost its cogency now.

The present action of the Bank, of varying its rate of discount according to the demand and with relation to the banking means at its command, is the correct one. If a power existed anywhere to create a new issue of notes, this would of course diminish the stringency of rate of discount, notes being by their increase *pro tanto* cheapened; whereas, if gold leaves the country, what remains of the currency (notes and gold) should by common laws become of enhanced value.

Whatever, therefore, is an addition to the currency, counteracts the natural contraction and its concomitant and efficient action on rate of discount, whereby alone this country becomes the better market for gold, and capital also; and by their return things are restored to their former position. The supposed relief would at best be the occasion of delay till a further amount of gold had gone out equal to the new issue, and then the straitening scarcity would have reached the same point from which we started: a fresh demand for issue would be repeated till gold was exhausted, and the convertibility of the note altogether endangered.

No claim for extraordinary issue can be entertained on the above ground.

The machinery of the Act of 1844 is complete and self-adjusting; but in 1847 there was a disturbing cause quite distinct and extraneous from the intended action of the Bill, arising from the moral fears of men under panic, thereby causing an instantaneous and violent collapse, unforeseen and unprovided for.

Under the influence of panic, notes cease to circulate as freely as before, however much their dearness tends to economy and to the more active use of them. The effect of alarm is stronger still—hoarding commences; no one likes to let them go beyond their reach, and the lock-up becomes general.

Supposing about 19,000,000 *l.* or 20,000,000 *l.* to be the ordinary wants of the public, and this be taken as the normal point, the paralysis and contraction by panic, by its virtual annihilation, renders notes more necessary to perform the same number of transactions.

This was a pressure so much in addition to the wholesome one of a high rate of interest, and was such as to interfere with the means of conducting the internal trade of the country, at a moment, too, when it should be most fostered, and its multiplied transactions make a healthy and legitimate call for currency, whereby, so far, gold would rise in value and be the more attracted to this country. What was hoarded would thus have been eminently useful without altering the due effect on the quantity of the currency in any particular. This peculiar cause of panic, viz., the fear that there may be a point when notes may be unattainable at any price, is, perhaps, in the nature of things, occasionally inevitable, and should have been provided for in the Bill of 1844, and was indeed suggested at the time. The omission led to much unnecessary suffering, and the necessity of an exceptional measure was not admitted till commerce had reached a point of endurance when the evil had manifestly become intolerable.

Assuming that the power of relaxation was at that time beneficially exercised, it may be said that then the Act was but theoretically understood, and its real stringency not previously apprehended.

The public were acccustomed to rely on the Bank as a certain place of resort when other sources of loans were dried up; and in this confidence, in common with bankers and others, made little or no provision as they saw the cloud approaching.

It is true had the Bank acted on the rate of discount sooner, the pressure necessary for remedying

remedying the evil would have been earlier and more gradual, and men would have contracted their engagements owing to such timely warning; but the Bank, as well as the public, had to learn their lesson, and having hitherto looked almost entirely to the foreign exchanges as their sole guide and monitor (with the power of issue at pleasure), had to be made to feel that even when the exchanges had ceased to be unfavourable, their sole reliance now must be only on their own till.

It was, perhaps, necessary that some such tremendous experience as the crisis of 1847 should have taken place before the scope and full action of the Bill of 1844 could be generally understood, and the means of working it out properly elucidated, to the ignorance of which, doubtless, much of the intensity at least of that calamity may be attributed.

The example by what means we have lately passed through a period of war, which in the former state of the law, and certainly under the former tardy action of the Bank, would not have passed over without crisis and panic, is a proof that the early and timely raising the rate of discount (which superseded the necessity of the more disturbing course of refusing discounts, and is in conformity the rather with the prestige that the Bank opens its doors to all, though at its own price) is the only key to the due working the machinery of the Bill; no great discovery it may be said, but practically arrived at by the necessity of the Bank's new position.

The lesson having been learnt, and the whole bearing of the subject far better understood by all, it remains to inquire whether that dearly bought but acquired knowledge is sufficient to make any further legislative provision for an avowedly exceptional object necessary, presuming always, that in every particular other than that of panic, the Act is all-sufficient.

The sudden and complete, nay simultaneous, effect of the bare knowledge that notes were to be had, is proof how little is wanting to tranquillise, and, therefore, to anticipate and prevent alarm, so catching, so unreasoning, wide-spreading, and uncontrollable.

It is, therefore, for the above reasons, that the danger from panic (lest notes should be totally unattainable) is now very much diminished; but who can say what other class of circumstances may not occasion panic again? for although no provision had been made by the Act, yet unendurable pressure forcibly burst a passage or valve through the Bill; and the certainty that this safety-valve can again be still more readily had recourse to, will probably be in future a sufficient antidote against needless alarm; and such a sudden action on the currency, arising out of the peculiar cause above alluded to, need not any longer be apprehended.

The knowledge alone that, should the case arise, relief will be at hand, it may be said, is enough, without actual legislation at all. I am inclined to think so too, and shall therefore be content now (which I should not have been before) to see the Bill left untouched, and in its full integrity. It is because I cannot but fear that if a definite power were given to Commissioners appointed by an Act of Parliament (though I admit their services might possibly be required), it might lead to a misapprehension of its limited extent (*vide* Sir Robert Peel's letter to Mr. Cotton, in his evidence upon the Commercial Distress in 1848), and a host of clamourers would arise, especially amongst traders without capital, which might lead to a too facile relaxation, and endanger the very principle of the Bill which I desire so much to uphold.

With regard to the suggestion that 14,000,000 *l.* on security might be enlarged to 16,000,000 *l.*, I am of the same opinion as regards safety, though I do not see any corresponding advantage to be gained.

The advocates of the measure, who look for an extension of currency thereby, are mistaken. It would not, permanently, add one farthing to it, but would release so much gold from the Bank vaults, and leave so much less as the store, independent of oscillations, on which the convertibility of the note is to depend. The amount of 14,000,000 *l.* has been determined on by that which is supposed to be the minimum which the public could by possibility do with, but which in the most depressed state of the circulation would leave a sufficient amount of gold in the coffers of the Bank (and the notes with the public were, in December 1839, below 16,000 *l.*); and under the consideration that if the gold were nearly all gone, yet the necessity for that minimum would preclude the coming for exchange for gold. It might be safe to raise it to 16,000,000 *l.*; but for whose advantage? The letting loose so much gold at present in hand, would have the disadvantage of permanently reducing the amount held by the Bank by so much. The advantage would be insignificant. The issue of such 2,000,000 *l.* of notes (as in the case of the 14,000,000 *l.*), would allow so much otherwise dead and unproductive capital to be more usefully employed in substitution for the gold exported, and to this extent an economy would be effected.

The figure 14,000,000 *l.*, therefore, perhaps is high enough, with a view to public confidence in the undoubted convertibility of the note.

With regard to the Scotch and Irish Acts, doubtless they are defective and wanting in assimilation with that for England in respect to notes under 5 *l.*; which are those for which gold is more likely to be demanded in the event of any alarm or discredit which would probably occur at the most inconvenient moments (as may be seen by former experience), calling for gold from England, and aggravating its scarcity by such unlooked-for drain. The amount is not insignificant, if it be true that one-half of notes in Ireland, and three-fourths in Scotland, are under 5 *l.*; they should, if possible, be extinguished altogether. The Bank of England note should be made legal tender throughout the United Kingdom.

The Scotch and Irish banks might, when they extend their issues, hold Bank of England notes for such portion of their own notes as were not below 5 *l.*

This would obviate the necessity of their periodical supply of gold from England, which last month was to a most inconvenient amount, viz., 350,000 *l.* to Ireland, and 125,000 *l.* to Scotland.

Appendix, No. 1.

S. Neave, Esq.

Scotland. The expense of needless transmission of gold would be saved, it being not for use; for it is seldom unpacked, and is so returned, but called for in order to conform to the letter of the Act.

It would be an advantage to the several localities, and a great improvement, if all banks of issue whatsoever, deposited security as the Bank of England does, with permission to compound.

John Horsley Palmer, Esq.

15 October 1856.

J. H. Palmer, Esq.

I HAVE entertained an unfavourable opinion of the Act of 1844 from the period of its enactment, and which is confirmed by its operation to the present time.

1st *Q.* Have you any suggestions to offer with reference to the operation of the Act of 1844?

A. It has had the effect of creating an undue expansion of credit upon the increase of bullion during a favourable exchange with foreign countries by the frequent and great reduction in the rate of interest by the Bank of England, with the view of increasing the amount of bills of exchange under discount at such reduced rates of interest, which, when established, did not accomplish the object to any extent. Witness the periods of 1844–45, 1848–49, 1850, and 1852. In a period of commercial discredit, subsequent to an unfavourable exchange with foreign countries, the Bill has rendered the Bank powerless under a temporary pressure on the part of the public (the unfavourable change having long ceased), by the limitation of issue imposed upon the Bank when a much larger amount of gold was in the Issue Department than was requisite to secure the convertibility of the bank-note. This was clearly exhibited by the effect produced by the Order in Council issued in October 1847, upon the eve of an universal commercial failure in the metropolis; upon which order being issued, authorising an unlimited issue of notes by the Bank of England, the demand for accommodation by the public immediately ceased.

Similar events are likely hereafter to recur under the absolute limitation of issue by the Bank of England, until the commercial credit of the country be brought to the brink of destruction; and when an extension, permitted under an Order in Council, is inoperative in restoring the commercial prosperity which had been previously unnecessarily sacrificed.

That similar consequences were not unlikely to have occurred during the present year, if the foreign expenditure in the eastern part of Europe, for the maintenance and support of the armies, had continued upon the scale of the two preceding years, the trade with that part of the world only admitting of a gradual return of the specie exported for the supply of the Commissariat.

That while the trade of this country (as at present) is in the most satisfactory state, a foreign discredit may press upon the specie in this country, to such an extent as may render it doubtful whether, upon the principle of a limitation of issue by the Bank of England, under the Act of 1844, the Bank may not be forced to take violent measures to stop the foreign demand, with upwards of 10 millions of gold in the Issue Department, whilst a discretionary power at an advanced rate of interest might, and would, in all probability, avert any evil consequences that might otherwise arise.

2d *Q.* Would you recommend its renewal as it stands for another term?

A. No.

3d *Q.* If not, what amendments to you seem advisable?

A. I would throw the responsibility upon the Bank of England, which could always insure the convertibility of the bank-note, if not interfered with by the Government, except in periods of continued internal panic, upon all paper and credit issues. A weekly publication might be made, in the same form of accounts that existed prior to the Act of 1844.

Remarks.—I would beg of you to extend your observations to the Irish and Scotch Acts of 1845.

I never could see any valid reason for placing the circulating medium of Scotland and Ireland upon a principle different from that of England. If any change be contemplated, I would propose making the note of the Bank of Ireland a legal tender in Ireland, only for the notes issued by all other Irish banks, and give the same force to the Bank of England notes in Scotland.

William Cotton, Esq.

4 October 1856.

W. Cotton, Esq.

IF the Government determine that it is expedient to have a Committee of the House of Commons on the Bank Acts of 1844 and 1845, it is not for the Bank of England to offer any objection.

It is, however, worthy of consideration, if in the present transition state of the circulating medium on the continent, by the substitution of gold for silver, the large remittances of silver to China and India, and the probability of some monetary disturbance abroad, it is desirable to have a Parliamentary Committee on the circulation of England, encouraging thereby discussions on the various schemes for regulating the circulating medium, thus undesirably disturbing the public mind, unless the Government are satisfied that they have some well-considered plan for the substantial improvement of the Acts of 1844 and 1845.

Under

Under the Acts of 1844-45, the credit of the circulation has been most satisfactorily maintained, and was never questioned even in the great commercial crisis of 1847, before the sound principle of raising the rate of interest, instead of forcibly restricting the amount of discounts or advances, was fully understood or acted on.

If the issue of notes by existing banks had not been limited, and the establishment of new banks of issue had not been prevented, the country would have been inundated with a paper circulation, gold would have been displaced, and the convertibility of the bank note into specie, particularly in a state of war, could not have been maintained.

By the Acts of 1844-45, the great object Sir Robert Peel had in view, of making the circulation vary in amount as a metallic circulation would have done, was as fully accomplished as if there had been only one bank of issue, regulating its proceedings on sound principles, or if notes had been issued on metallic security alone, as was formerly the case at the banks of Genoa, Amsterdam, and now at Hamburgh. Economy and the payment of the expense of a paper circulation are really the only objects for the issue of notes on securities.

Sir Robert Peel was desirous of inducing other banks of issue to adopt the Bank of England circulation, and the restriction of the issue of bank notes to one establishment was fully considered, but the limitation of issues of notes, except on gold, &c., and a portion of silver by the Bank of England, was considered as accomplishing the object in view. It was suggested to Sir Robert Peel to restrict the issue of notes by the private and joint stock banks to a period of ten years, but he did not consider this expedient.

The issue of Government bank notes, by a Commission, was decidedly objected to by Sir Robert Peel, as subjecting the circulation to political influences, or at least create an apprehension that it would do so, and the Government would be involved in difficulties, in the event of forgeries, as in the case of the forged Exchequer bills, or on any run for gold in consequence of internal commotions.

The Government, without any trouble, or incurring any responsibility, have secured to the public a large share of the profit from the Bank circulation, viz., a loan of 11,000,000 *l.*, at a low rate of interest, which may also be considered as an additional security to the holders of Bank of England notes; a payment of 120,000 *l.* and a duty of 60,000 *l.* per annum, and the profit from any additional securities that may be held by the Bank, in consequence of the cessation of issues by private or joint stock banks.

The Government (*i. e.* the public) hold no security against the issues of other banks, and have no advantage from their issues except the stamp.

Believing that any alteration of the laws regulating the currency is of itself an evil, and should not be encountered except for the accomplishment of some really important object, I am clearly of opinion that the Acts of 1844-45 should not be disturbed.

If the question must be opened, it might be desirable to give the operation of the Act a fixed term, whatever its provisions may be, that time may be given to prove their advantages or disadvantages; but it may be questioned if the public would be as well satisfied with this new Act as under the present Bank Act, which can at any time be revised on giving twelve months' notice.

It would be desirable that so many of the Directors should not go out by rotation, as it makes too great a change in the members of the Court at every election.

At present the Bank of England, as a bank of issue, has no exclusive privileges of any advantage. No new bank of issue can now be established; and even when a bank, not having more than six partners, could have issued notes in London, one only, that of Messrs. Hoares, availed itself of the privilege, and that only for a short time.

The position of the Governors of the Bank and of the Directors is an honorary and not a lucrative one, and they hold only the required amount of Bank stock for a qualification. In my judgment, if this prestige is any way destroyed by fettering their independence, or remunerating them by salaries in proportion to their services, the character of the direction would be seriously changed, and a very different class of persons would seek for admission into the direction.

The Bank of England note was made a legal tender, not for any advantage to the Bank, but for the security of the private or joint stock banks, as they could more readily obtain notes than gold in the event of any run upon them.

Scotch and Irish Banks.—The continued circulation of notes under 5 *l.* in Scotland and Ireland, and some other circumstances, induced Sir Robert Peel to place the banks there in a different position, with respect to their circulation, than the private and joint stock banks in England: giving them power, similar to that given to the Bank of England, to issue notes on gold, and a proportion of silver, equal to the average amount of gold and a proportion of silver held at the close of business on Saturday for four weeks.

The power to issue notes, otherwise than as above, on gold or silver, was to be the amount of the average amount of notes for four weeks immediately after the 31st December 1845.

This deviation from the law regulating the issue of notes in England was far from desirable, but Sir Robert Peel was induced, under the particular circumstances of the case, to allow it.

The continuance of notes under the value of 5 *l.*, in parts of the United Kingdom, is certainly very inconvenient.

It prevents any considerable amount of gold continuing in circulation in Scotland and Ireland, and in the event of any discredit of the paper money, or any apprehension of it, a heavy demand is made on England for a supply of gold.

Appendix, No. 1.

W. Cotton, Esq.

The system of banking in Scotland, which has lately been introduced into London; viz., to allow interest on deposits at call, or on short notices—has given, and will give, rise to serious inconvenience, as the depositors, in the event of a monetary crisis, will demand payment, when they would not sell their own securities.

The Scotch and Irish banks pay nothing to the Government for the privilege of issuing notes, besides the stamp duty, which being for an actual stamp, the Scotch bank-notes are continued in circulation as long as they will hold together, and are in a very filthy state; and, I presume, it is the same with the Irish notes.

Although the banks of Scotland derive little profit from their note circulation in comparison with that from their deposits, any attempt to restrict the circulation of notes to 5 *l.* and upwards, would be stoutly resisted; and the only hope of seeing a gold circulation in Scotland and Ireland, must arise from the present limitation being continued, and these countries becoming more opulent and requiring a larger circulation for their transactions, the limit would be exhausted by the issue of notes of 5 *l.* and upwards, and they would find it convenient to issue gold.

John Oliver Hanson, Esq.

My dear Governor, 4 October 1856.

J. O. Hanson, Esq.

I HAVE filled up in the simplest form possible my answer to the queries you have put to me (and which I now return to you), believing that a simple yea or nay will be more useful to you in collecting the opinions of the Court, than if I attempted to give you a more lengthened reply to them. I may, however, add that I consider the Act of 1844 has worked admirably, and been productive of vast benefit to the public, in placing the credit circulation of the country, as regards banks of issue, upon a firm and solid basis.

I should be very sorry, therefore, to see the Act of 1844 disturbed and broken in upon, and, consequently, should strongly advocate its renewal for another term as it now stands, rather than run the risk of seeing its efficacy destroyed by opening the door to admit of alterations, which might be very questionable.

The Irish and Scotch Banking Acts of 1845 I consider to have worked equally well with the Act of 1844, and I should be very sorry to see them disturbed.

Believe me, &c.

T. M. Weguelin, Esq. (signed) *J. O. Hanson.*

Answer to 1st Question.—None.
Answer to 2d Question.—Yes.
Answer to 3d Question.—None.

Note.—I have no remarks to make, or suggestions to offer, believing these Acts to have worked well.

George Lyall, Esq.

My dear Weguelin, 3 October 1856.

G. Lyall, Esq.

ON the other side I have as shortly as possible replied to the questions you have sent me, as, I presume, the opinions of the Directors, rather than the reasons for those opinions, are all that the Chancellor of the Exchequer requires.

Believe me, &c.

T. M. Weguelin, Esq. (signed) *G. Lyall.*

Answer to 1st Question.—I consider that the operation of the Bill of 1844 has been conducive to the interests of the public, by acting as a check upon excessive issues on the part of the country banks, and inducing the Bank of England to take prompt measures for keeping an ample amount of bullion in their coffers, and maintaining such a sound banking position as to give great confidence to the mercantile community.

Answer to 2d Question.—Yes.

Answer to 3d Question.—I am not prepared at present to suggest any amendments, but if any, they would refer rather to the private interests of the Bank, which were not very leniently dealt with in 1844; and about which, I presume the Chancellor of the Exchequer does not at present require the opinions of the Directors, as they are rather matters of detail than of principle.

Note.—It appears to me that the Act of 1845 has been equally advantageous to the public and to the commercial community in Scotland and Ireland, by restraining excessive banking issues as the Act of 1844 did in this country.

James Morris, Esq.

EXTRACT of Letter to *T. M. Weguelin*, Esq.

3 October 1856.

J. Morris, Esq.

IN general terms I am satisfied with the Bill of 1844; and I should recommend its renewal for a term of years.

Thomas

Appendix, No. 1.

Thomas Charles Smith, Esq.

My dear Mr. Governor, 7 October 1856.

T. C. Smith, Esq.

I HAVE to acknowledge the receipt of your letter of the 30th September, requesting my written opinion on certain questions relating to the Banking Acts of 1844 and 1845.

I have now the pleasure of submitting to you my replies to the queries contained in your note.

I am, &c.

T. M. Weguelin, Esq. (signed) *T. C. Smith.*

Answer to 1st Question.—I am of opinion that the Act of 1844 has been highly beneficial in its operation, by maintaining the convertibility of the bank note, and in preventing any discredit of the paper circulation of the country.

Answer to 2d Question.—I do not consider that it would be expedient to make any alteration in the Act of 1844; and I would recommend its renewal as it at present stands, for another term.

Answer to 3d Question.—None.

Note.—Without any experience of the practical working of the Irish and Scotch Banking Acts of 1845, I do not feel competent to hazard an opinion upon the operation of those Acts. I am, however, of opinion that the provisions of the Acts of 1845 are based upon sound principles.

Charles Frederick Huth, Esq.

My dear Mr. Governor, 8 October 1856.

C. F. Huth, Esq.

I FULLY approved of the Banking Act of 1844 at the time when it was framed, and believe that, upon the whole, it has justified the anticipations of its originator; but I am not prepared to say that after the great extension of the business of the country, consequent upon the adoption of the free trade policy, some of the limitations of the Act may not be beneficially enlarged.

I have not been able to bestow sufficient personal attention on the various grave questions connected with this subject, to offer any specific suggestions as to the modifications which may be desirable; but I am decidedly of opinion that at a time of great financial pressure, the safety of our position should not be left to depend on the particular views of the Government of the day, which might assume or decline the responsibility of interfering with the provisions of an Act repeatedly and deliberately sanctioned by Parliament, after twelve years' experience.

My opportunities of judging of the Irish and Scotch Acts of 1844 have been very limited, and would not justify my expressing an opinion in regard to them.

I remain, &c.

T. M. Weguelin, Esq. (signed) *C. F. Huth.*

Thomas Newman Hunt, Esq.

My dear Governor, 27 October 1856.

T. N. Hunt, Esq.

IN compliance with the desire expressed in your letter of the 30th September, that the Directors of the Bank should communicate to you their opinions with regard to the Banking Acts of 1844 and 1845, I beg leave to state in reply, that, as a general principle, I should advocate the gradual discontinuance of the use of all bank notes issued without the deposit of an equal amount of gold or silver.

This may be effected, first, by prohibiting the replacement of any notes issued by banks, which may, by insolvency or otherwise, have discontinued their issue. Secondly, by giving a more active operation to the principle of the 24th section of the Act of 1844; and thirdly, by suppressing periodically, a portion of all other notes which are now issued without a corresponding deposit of bullion.

I would also recommend the discontinuance of the use of all bank notes for sums under 5 *l.*

And, as bank notes are necessary for economy in the use of money, and for the convenience of the public, banks of issue should be established in each of the kingdoms of England, Scotland, and Ireland, where notes should be issued upon the deposit of bullion, and these notes should be payable in coin on demand at the bank where they were issued.

By this course, we should return in a few years to the soundest system of money, and thus obtain the greatest possible security for the stability of the value of property; for which reason, in contemplating alterations in the present Acts, I should consider any closer approximation to these principles an improvement.

But the elements of this system already exist in the Acts of 1844 and 1845 in so great a degree, that the convertibility of bank notes into coin on demand (with the exception of those which are issued without the deposit of any security at all), is almost as certainly secured as if they were issued only upon the deposit of bullion.

Appendix, No. 1.

T. N. Hunt, Esq.

I have, therefore, no hesitation in recommending a renewal of the Banking Acts of 1844 and 1845 for another term as they stand, unless some further advances, of the character suggested, towards a currency based upon the precious metals only can be introduced.

I remain, &c.

T. M. Weguelin, Esq. (signed) *Thos. N. Hunt.*

Thomas Masterman, Esq.

My dear Weguelin, 20 October 1856.

T. Masterman, Esq.

In reply to your first query respecting the operation of the Bank Charter Act of 1844, I think that the working of the Bill is quite satisfactory, except in times of domestic panic, such as occurred in 1847, at a period when the foreign exchanges were not against this country; and I think that the public were then so convinced of the relief afforded by the authority given to the Bank to increase its issues upon securities, that they will, as a matter of course, look for a similar measure on any future emergency of a like nature; and I would greatly prefer that there should be a legal way of disposing of the subject, rather than throw so grave a responsibility on any individual minister. For that purpose, I think, a tribunal might be constituted, consisting of the First Lord of the Treasury, the Chancellor of the Exchequer, the President of the Board of Trade, and the two Chairs of the Bank.

As a matter more of detail, but which I think by no means unimportant, because it is likely to ensure a more regular system of administration, I would recommend that the outgoing Directors at every annual election be eligible for re-election. I have never heard of any supposed advantage in the present system, which compels the yearly change of one-third of the whole Court.

I have no intimate knowledge of the working of the Scotch Bill; but as regards Ireland—when the issues of the different banks expand, as they do periodically—I think it might be optional with them to represent their extra issues either by sending gold to Ireland, as at present, or by placing it to some separate account at the Bank of England.

Under the present law I have frequently known boxes of gold sent over to Ireland (to Dublin chiefly) at considerable risk and expense, which, after having laid there weeks or months, have been brought back to London with the seals unbroken, so soon as the extra issues had receded within the authorised limits.

Yours, &c.

T. M. Weguelin, Esq. (signed) *Thos. Masterman.*

James Pattison Currie, Esq.

My dear Mr. Governor, 6 October 1856.

J. P. Currie, Esq.

I have to acknowledge the receipt of your letter of the 30th ultimo, inclosing some questions relative to the Banking Acts of 1844 and 1845, upon which you wish to have my written opinion. I consider that the Act of 1844 has completely carried out the object for which it was framed; and I should strongly advocate its renewal for a term of years as it now stands. I have carefully perused the Acts of 1845, relating to Scotland and Ireland. They appear to me to be based on sound principles, but as I have not had an opportunity of personally testing the working of them, I cannot venture to offer any suggestions respecting them.

Believe me, &c.

T. M. Weguelin, Esq. (signed) *James P. Currie.*

Henry Hucks Gibbs, Esq.

My dear Sir, 13 October 1856.

H. H. Gibbs, Esq.

In answer to your letter of the 30th September, containing certain questions relative to the Bank Acts of 1844 and 1845, I beg to say that I should regret to see any attempt made to alter the Act of 1844 with reference to the Bank of England; the limitations fixed by that measure having, in my opinion, worked exceedingly well during times of great difficulty; and I should, therefore, decidedly recommend its renewal as it stands for another term.

With regard to the Acts of 1845, relating to Ireland and Scotland, I have not had much practical experience of their working in those countries, but I understand that it has been very successful; and as being framed on the principle of the Bill of 1844, I consider them well calculated to promote a sound systemof banking.

I am, &c.

T. M. Weguelin, Esq. (signed) *Henry H. Gibbs.*

John

John Gellibrand Hubbard, Esq.

October 1856.

J. G. Hubbard, Esq.

The essential feature of the Bank Charter Act of 1844, and of the Irish and Scotch Acts of 1845, is found in the provisions which limited the amount of notes issued on credit, and stipulated that all further issues should represent bullion.

The principle thus established of subjecting the variations of the entire currency, whether coin or paper, to the same laws by which it would be governed, were it altogether metallic, cannot be too highly or too unequivocally approved; and although the clauses introduced for promoting the adoption by private issuers of the notes of the Banks of England and Ireland, did not operate to the extent which might have been expected, still the motive and the means are indicated for rendering the entire credit-issues of the country, not professedly only, but indubitably, and at all times, the exact equivalent of the coin they represent.

In considering the bearing of the Bank Charter Act of 1844 upon the interests of the Bank of England, it must be remembered that the Bank fulfils three characters, quite distinct from each other:—

1. As Manager of the Public Debt, of which it registers and transfers the titles and pays the dividends.
2. As a bank of deposit and discount.
3. As the Administrator of the larger portion of the credit currency, mechanically also, the channel through which the operations of commerce regulate the issues upon bullion.

In this last capacity only is the Bank affected by the Act of 1844. The Act prescribes the terms on which the Bank is to buy bullion, cedes to the Bank, together with all the labour and the risk, such part of the gain on the Issue Department as may remain after certain deductions by the State (which constitute the larger portion of the net profit); and with regard to any increase of credit-issues beyond fourteen millions, the Act reclaims the profit of them for the public, subject only to the deduction of the expense of administration.

The advantage derived by the Bank from its agency in the Issue Department being thus limited and defined, it can have no pecuniary motive in the extension of the credit-issue under its own administration; and any opinion offered by its Directors upon this subject can be grounded on no other considerations than regard for the public interest.

The questions of most general interest in connexion with the Act of 1844, are those touching the amount of paper-money issued on security; they may be thus stated:

1st. Was the amount of fourteen millions rightly fixed?
2d. What variation in that amount is suggested by subsequent events?
3d. Under what circumstances can any further variation be contemplated?

1st. The considerations which determine the amount of a credit-issue are, on the one hand, "a desire to effect all possible economy of the precious metals;" and, on the other, "the duty of restricting the paper-money which supersedes them within perfectly safe limits," so that, under no ordinary fluctuations of prices or of political or commercial discredit, could any portion of it be returned to the issuer for payment. If the ten years' Bank records immediately preceding 1844 are examined with this rule in mind, it will be found that, on the 12th December 1840, the notes with the public were 14,451,000 *l.*; and that on the 28th December 1841, they were 14,742,000 *l.* Looking, therefore, at the Bank of England as the issuing body, it would have been unjustifiable to have carried the credit-issue in the Act of 1844 even to 15,000,000 *l.* with any pretension to public confidence.

Again, there was no reason for fixing the credit-issue at less than 14,000,000 *l.*, since there was no instance of the external circulation being so low within half a million. The amount of fourteen millions was, therefore, rightly fixed.*

2d. The only enlargement of the credit-issue of the Bank of England, contemplated by the Act of 1844, was one depending on the surrender of private issues; and in such event, the Bank was to be licensed to issue two-thirds the amount so surrendered. Effectively in December 1855, 475,000 *l.* was issued on securities by the Bank, in consideration of country issues having lapsed to the extent of 712,500 *l.*

But why should two-thirds only of such lapsed country issues have been replaced? The reason which has been alleged is this: "the country banks held, or ought to have held, gold against one-third of their issues; two-thirds only of such issues were, therefore, based on securities, and the substituted bank-paper must not exceed that proportion." This reason would be quite satisfactory if the country circulation, sanctioned by the Act, represented the entire circulation required for the conduct of the business of such issuing banks; but this, I apprehend, was not the case.

The business of country banks consisted not only in providing a district currency by issuing their own notes to such an extent as might be necessary upon loan or purchase; but also in receiving deposits to be partially invested, partially held in reserve.

The deposits held by the country banks were not less (upon the evidence of the Reports of 1832 and 1841) than from sixteen to twenty millions; if one-fifth only of these deposits were held in reserve, we should have found 3,500,000 *l.* lying in the tills of the country banks,

* *Vide* this treated more at large in "The Currency and the Country," chap. iv., and in "Letter to Sir C. Wood on the Monetary Pressure of 1847."

Appendix, No. 1.

J. G. Hubbard, Esq.

banks, and constituting with the 8,500,000 *l.* extant in the spring of 1844, an entire country currency of 12,000,000 *l.*

It is against this total, or rather it is as a portion of this total, that gold ought to have been held by the country banks. If they had held 3,000,000 *l.* (or 2,833,000 *l.*, the one-third of 8,500,000 *l.*, as supposed by the agreement in defence of the fifth section of Sir Robert Peel's Act) it would not have been too much; but the truth is that, assuming the bank of Mr. Stuckey,* one of the highest of its class, to be only a fair representative of the whole number, the entire reserve of the country issuers did not average two millions; of which 1,000,000 *l.* might be gold, 500,000 *l.* silver, and 500,000 *l.* Bank of England notes.

I infer then that the currency actually engaged in the business of the country issuers was 12,000,000 *l.*, that of this they held in bank notes and gold 1,500,000 *l.*, leaving at 10,500,000 *l.* the amount of additional bank notes which would have been required to replace the country issues had the substitution taken place in 1844.

Admitting, however, the possibility of the country banks keeping in reserve as against these sixteen or twenty millions of deposits, not 3,500,000 *l.*, but 2,000,000 *l.*; and those 2,000,000 *l.* composed, as before stated, of one million gold, half a million silver, and half a million Bank of England notes; and it follows that, as against the current issues of 8,500,000 *l.* they held no reserve in gold, and that to substitute for those issues the notes of the Bank of England, in the proportion of two-thirds only, is unnecessarily to contract the credit paper of the country.

3rd. Supposing it to be the wish of the Government to carry out, so far as regards England and Wales, the arrangement sanctioned by the 23rd and 24th sections of Sir Robert Peel's Act, I can have no doubt that an issue on securities by the Bank of England to the extent of 22,500,000 *l.* would leave the demand for further notes to be issued on bullion quite as large as that which has prevailed since 1844.

The arrangement, as regards the country issuers, would be of the simplest character. Their beneficial interest in the circulation, provisionally permitted, would be (by the precedent sanctioned in the Act) assessed at 1 per cent. per annum; and the annuities which would result might be redeemed by the Government at such a price as would satisfy the justice of the case.

Any apprehension that the termination of their issuing power would induce the country bankers to cease banking altogether, would be unfounded. As I have already mentioned, the deposits of the country banks are double the amount of their issues; there is business to be done independent of their circulation, and if capital can be profitably engaged in any portion of the United Kingdom, there capital will find its way.

The establishment by the non-issuing London and County Bank of its sixty-three branches, many of them in towns of scanty trade and population, is an evidence of readiness to meet any demand however slight for the accommodation of a bank.

The 3d section of the Act of 1844, limiting the proportion of silver to the whole amount of bullion on which notes may be issued by the Bank to one-third, was seriously complained of at the time, and the entire removal of this limitation was a main feature in a petition presented to the House of Commons, on the 13th July 1847, from certain "merchants, bankers, and traders of London."

Subsequent events have rendered the limitation inoperative, but those events might have been reversed; an increased production of silver and its depreciation comparatively to gold might, had "the Bank been permitted to issue notes on silver bullion without restriction," have left it unable to redeem its engagements in gold while its vaults were full of dollars.

In the event of the entire currency of England being united under a single issuer, it might be desirable to make a provision for correcting, without further legislation, any disproportion between the bullion and the note circulation which might be occasioned, on the one hand, by a lower range of prices, or the extended use of banking facilities on the other, by an elevation of the range of prices arising from an increased abundance of the precious metals. I assume the satisfactory proportion to be one-third bullion to two-thirds credit; *i. e.*, if the entire circulation were 33,750,000 *l.*, 22,500,000 *l.* might be on securities, and 11,250,000 *l.* on gold.

To conclude:

1st. I entirely approve the principle of the Bank Charter Act of 1844, which, by limiting the issue of notes on credit, subjects the variations of the combined currency of notes and coins to the same laws by which it would be governed were it wholly metallic.

2d. As limitation of credit paper is the very essence of the Act, and as limitation operates sensibly only under circumstances of pressure, it is obvious that to evade its stringency because a pressure is felt, is simply to stultify the Act; while again, to admit a provision for extending the credit issue in the event of difficulties arising from any possible or prospective contingency, would be to encourage overtrading, and foster in the banking community an unwarrantable dependence upon the Bank of England, while they make immoderate engagements, and neglect to maintain an adequate reserve for their own protection.

3d. It

* *Vide* "Report on Bank Charter," p. 451.

3d. It is undesirable, seeing that its notes are payable in gold, that the Bank should have the power of issuing more than one-fourth of such notes on silver.

4th. Twenty-two millions and a half being the amount of credit paper authorised by the Act of 1844 for the collective issues of the Bank of England, and the private and joint stock banks of England and Wales, I am of opinion that unless the Bank of England issues on securities to an equal amount in substitution of lapsed or commuted country issues, the aggregate credit issue will be needlessly curtailed. And I am also of opinion that it would be for the public advantage that the country banks of England and Wales should work exclusively with the notes of the Bank of England.

5th. Subject to the amendments which the preceding clause suggests, I am of opinion that the Bank Charter Act of 1844 should be renewed for a period of 10 years.

With regard to the Irish and Scotch banks, they stand, in virtue of the Acts of 1845, on the same grounds as the private and joint stock banks of England, and exercise, on sufferance, the right of issue to a defined amount; the additional currency required being, in the Irish and Scotch banks, provided in their notes representing bullion, and, in the English banks, in Bank of England notes, for which they must have given value.

The principle of Peel's Bill is carried out in either case; all currency beyond their authorised issue must be provided out of capital.

The average of the Ten Years 1846-55, gives the following return:

	Circulation.		Bullion.
	£.		£.
Irish Banks - - - - - - - -	5,460	- -	1,691
Scotch Banks - - - - - - - -	3,559	- -	1,177
	£. 9,019	- -	2,868

The deposits held by these banks, particularly by the Scotch banks, are very considerable, and when it is observed that the gold and silver constituting their entire cash reserve to answer their liabilities on both circulation and deposits, is a trifle short of one-third of their circulation alone, they cannot be considered as being aggrieved by the law which has compelled them to keep the cash reserve their return exhibits.

The Irish and Scotch banks are supposed to complain of the inconvenience and costliness of conveying gold to and fro, as the fluctuations of their circulation demand a greater or less amount of bullion deposit. The inconvenience complained of, may, however, be easily remedied, if the Irish and Scotch banks adopt the same course as the English, and use, when their own notes are exhausted, the notes of the Bank of England; a process which might be further facilitated by these last being made legal tender throughout the United Kingdom.

(signed) *J. G. Hubbard.*

George Warde Norman, Esq.

My dear Governor, 22 October 1856.

Before I proceed to answer specifically the several questions you have submitted to me relative to the Bank Acts of 1844 and 1845, I think it necessary to say a few words on the general question of a paper currency.

Taking a simply theoretic view of this subject, I retain the opinion which I have formerly expressed, that the best conceivable issue, irrespective of profit, would be one which should proceed from the Government, or a body acting under its delegation, where every note should represent a corresponding amount of gold and silver. All that would be required under this system would be, that gold or silver should be exchanged for paper, or paper for gold or silver, as the wants of the public might require.

Suppose that the Bank of Hamburgh were to issue notes, instead of opening credits in its books, for all the specie deposited with it, and you have exactly the system above described.

But this state of things would involve an unnecessary sacrifice of profit. Quite sufficient security for the paper issue would be obtained, if a portion of it, considerably less than the probable minimum of issue under adverse circumstances, were vested in some interest-bearing securities of an undoubted character, and only the balance in gold or silver. Convertibility would still, practically speaking, be assured, and the oscillations in the circulation would be precisely the same as in the case first supposed. In other words, they would exactly represent the movement of a purely metallic currency, and these, in my view, are the objects to be attained.

Of course a political discredit, in which no notes would pass, is conceivable, however improbable it might be. But this is a risk to which I do not think it necessary to advert.

The danger that, in periods of great pressure, the Government or Legislature might be induced to lay hands on any very large metallic reserve, is a more probable danger; but this also I pass over on the present occasion.

Appendix, No. 1.

G. W. Norman, Esq.

At any rate, it is certain that neither of the above schemes are likely to be now adopted in England, and we must therefore deal with things as we find them, and descend from the dominion of pure science to a practical view of existing circumstances.

The question, then, is greatly narrowed, and becomes, shortly stated, this:—Is it desirable to re-enact the Bank Acts of 1844-45 simply, or with modifications; or, abandoning them, shall we revert to the state of things which existed between 1819 and the last renewal of the Charter?

I should regard with the greatest alarm any change in these Acts likely to interfere with their stringent character. Experience previously had shown that a simple obligation on the part of the Bank of England and of other issuing banks—the first to pay its notes in gold, the latter theirs in either gold or Bank of England notes—had been insufficient to place the currency in a satisfactory condition. We had suffered from the evils of direct insolvency, and from an improper use of the issuing power in aid of simple banking operations; while, on more than one occasion, even the retention of specie payments had been highly problematical.

Since 1845, the state of things has exhibited an immense improvement. The Bank of England, owing to the separation of departments, has always been amply provided with the means of discharging its obligations to the holders of its paper, even in the most pinching times. The country issuers have been deprived both of the will and the power to put forth their notes at periods when the state of the exchange demands a restricted issue, and insolvency among them has been unfrequent.

In short, from the very first introduction of paper money into England, I am not aware of any period of equal duration when the general mechanism of the circulation has worked so smoothly and satisfactorily as during the last 11 years.

If I am told that the events of 1847 exhibit a state of things opposed to this opinion, I reply that the evils then experienced were derived from several causes, viz.:—

First, from an enormous absorption of capital for the construction of railroads, &c.

Secondly, from the collapse after a long period of inflated credit and extravagant speculation.

Thirdly, from the prevalence of insolvency to an extent which had not occurred since 1825, if then.

I further affirm that these evils had nothing to do with the paper currency, and might have existed with a currency purely metallic, and that without Sir Robert Peel's laws we should have had all the misfortunes which befell us, as it was, in an aggravated form, inasmuch as the abuse of credit and speculation would have been allowed to proceed somewhat longer unchecked, and either the reality or the apprehension of a suspension of specie payments would have been added to them.

I should not, however, be disposed to deny that the events of 1847 would have presented themselves in a shape somewhat less formidable, had the management of the Banking department of the Bank of England been marked by an earlier and more consistent conformity with sound principle.

The truth is, that it is not the limit imposed by the Acts of 1844 and 1845, of which its opponents really complain, but of any limit; that of the Act of 1819 is equally opposed to the demand they make on the administrators of the currency.

They require in fact, although not in words, that at all times and under all circumstances, the holder of good banking securities should be able to turn these securities into money at a rate of interest which he may deem not unreasonably high. Now this is an advantage which a little reflection will show to be unattainable. It is something like a search for the philosopher's stone, or for Fortunatus' wishing-cap.

The truthful inquirer into the effect of our existing legislation in currency matters, should be specially referred to its operation from the commencement of the Russian war to the present time. During this period it has been tried most severely, and yet few will be found to deny that the currency and its administration have been in a most satisfactory condition.

Some, indeed, may say, that without a separation of departments, with full liberty on the part of the Bank Court to use its notes instead of its own capital, and the deposits of its customers in loans and advances, this liberty might not have been abused; that the country issuers would have acted with similar moderation; if so, the result would have been very much what we have seen, and in that case the Acts of 1844 and 1845 have done no harm.

But the supposition that this would have been the case seems to me quite unreasonable. The pressure on the Bank Court would have infallibly led to an abuse of its unlimited power of issuing notes. The temptation of augmenting their profits would have acted in a similar direction on the part of the country issuers. The efflux of gold would not have been checked in time, and we should have finally been driven into a state of things which would have imperilled specie payments altogether.

Some critics on our existing currency laws are in the habit of saying that, on the whole, they admire them greatly, but think they require some relaxing or dispensing power destined to meet extreme cases. I should deplore the existence of such relaxing or dispensing power, being convinced that the exception would speedily become the rule, that the whole efficacy of the law would finally be frittered away, and that a regulating influence, based on the state of the exchanges and on the natural demand for, and supply of capital, is the only safe guide. At any rate this self-acting machinery is far superior to the simple judgment and discretion of any man, or set of men. It would be requisite that the managers

of

of the circulation under an artificial, as opposed to our present natural, system, should not only be intimately acquainted with an enormous mass of facts in this and other countries as they actually exist, but that they should be able to foresee accurately all the changes that will occur during an indefinite future.

I do not, of course, consider our existing system as perfect. The first part of this letter will show how far I regard it as falling short of theoretic perfection; but smaller changes might be suggested in the Acts of 1844 and 1845, which I should consider decided improvements.

Sir Robert Peel looked to the final extinction of all private issues as an object highly desirable in itself. I agree with him, and should like, at any rate, to see some regulation which would hasten the attainment of this object. I must, nevertheless, allow that the effect of the Act of 1845 has removed or mitigated the evils which, heretofore, attached to this branch of our paper currency. There seems, however, to be no sufficient reason why the privilege of issuing 1 *l.* and 2 *l.* notes should be continued to the Scotch and Irish banks. Their complete abolition would, at any rate, absorb a corresponding quantity of gold, and so far retard the progress of depreciation.

These banks are allowed to issue any amount of notes, provided only they possess a corresponding amount of gold; while the English banks are confined to a fixed maximum circulation. Attempts will probably be made by the latter to obtain the same privilege as their brethren in the sister countries. I should prefer that the law should be rendered similar by making the fixed maximum general.

I must add, however, that the permission to issue on gold to any extent, does not appear to me opposed to sound principle, excepting as it may appear calculated to uphold the system of private issues.

The separation of the issue and banking departments of the Bank of England, which is now in reality complete, but which many, even well-informed persons like Mr. Tooke, regard as one simply of account and as unfounded in any natural distinction, would be rendered more patent and tangible if, in practice, the business were carried on in different places, and under names more widely separate in signification. On the whole, however, I do not consider this change desirable.

There are some curious anomalies in the important matter of the legal tender, which seem to require an alteration. Thus, in England, gold or Bank of England notes will discharge a debt. In Scotland and Ireland, only gold. It would be desirable that one uniform system should exist throughout the United Kingdom.

An improvement in the composition of the Court of Directors has been suggested, which, by increasing the salaries of the Governor and Deputy, might render it more easy to fill the chair, or to retain the services of a particular Governor, under certain circumstances, for a longer period than two years. This is a change, however, for which no legislation is requisite. It is, if desirable, quite within the power of the proprietors and directors.

Even at present, failures among issuing banks are of occasional, although not of frequent occurrence, and I can see no good grounds why this inconvenience should not be altogether obviated, by taking security from all issuers, as is done in some States of the American Union.

If I mistake not, the whole fabric of our paper currency might be broken up under the existing law by a resolution, carried by a bare majority, of the House of Commons. I am decidedly of opinion that in any renewal of the Bank Acts, the danger of any precipitate and ill-advised action on the part of the Legislature should be more carefully guarded against.

I have now reviewed our currency laws under two points of view:—

1st. With respect to the principles which should guide the legislator, supposing him to have a *tabula rasa* upon which to operate.

2d. Supposing him to be so far fettered as to be unable to effect any changes of a more radical character than would arise from improvements in the present law, but within that sphere to have his hands tolerably free.

I shall conclude by a few reflections on the course he ought to adopt under actual circumstances, when he will have to steer his course amongst the rocks and shoals of powerful and opposing interests, with many prejudices to overcome, and with little expectation that the public is sufficiently well-informed to support him in the tempest that may obstruct his course; in short, when even the introduction of improvements might be very difficult.

It must be recollected that the English people have no strong taste for systematic arrangement or theoretic perfection, no objection to anomalies or even contradictions in an institution which, on the whole, works well.

Now what do we chiefly require in a paper currency?

First, that it shall be secure and convertible, and little liable to discredit.

Secondly, that it shall oscillate like a metallic currency.

Now it seems to me that these important objects are very sufficiently attained by the laws of 1844 and 1845, and I see no chance of improving them, for which it would be worth while to run the risk of involving them in all the turmoil of a parliamentary war.

Appendix, No. 1.

G. W. Norman, Esq.

I conclude with a reply to the queries sent me, which, after what has preceded, you may readily anticipate:—

1st. I have no practical suggestions to make with reference to the operation of the Acts of 1844 and 1845.

2d. I would certainly recommend their renewal for another term, and that without any material alteration.

The above are my views in the interest of the public and of the Bank, under the actual condition of affairs. What precedes will show that I do not consider the existing laws perfect, and also the main improvements of which I think them susceptible.

Believe me, &c.

T. M. Weguelin, Esq., (signed) *Geo. Wde. Norman.*
Governor of the Bank of England.

Alfred Latham, Esq.

My dear Mr. Governor, 28 October 1856.

A. Latham, Esq.

My impression of the Act of 1844 is, that it was as good as could be passed at the time; that it has been serviceable to the commerce of the country; and that its renewal as it stands, or continuation rather, for another term might be ventured on safely enough.

Yet if the whole subject of the currency in England, Scotland and Ireland, is to be re-opened and discussed, there is no difficulty in pointing out imperfections in the Acts, both of 1844 and 1845; nor is it difficult to suggest the remedies, however difficult it may be to apply them.

If, as I believe, public opinion has advanced on the subject, it may be assumed that more can be done, and if so ought to be done, in the way of useful legislation. Few persons, for example, in England, would now recommend a return to 1*l.* notes; yet open to the same objections, they continue to circulate in Scotland and Ireland.

Several new causes, too, are now fairly in operation, such as the extension of the clearing-house, the absence of the Usury laws, communications by telegraph and railway, the penny postage, post-office orders, cheques to order, and a variety of banking expedients materially affecting the distribution and economy of bank notes.

I am aware of the prevailing opinion, that the increase of population and of trade are a reason why there should be more currency; and as if a logical consequence of that opinion, we are told in pamphlets or newspapers—indeed, we hear it occasionally among ourselves—that if the 14,000,000*l.* was a proper limit for the issue on securities in 1844, some larger sum of 16,000,000*l.* or 18,000,000*l.* would be more proper now.

But if more bank-notes are wanted (which does not necessarily follow), there is no occasion why they should be issued on securities; on the contrary, those causes, the increase of population and of trade, are a reason rather for enlarging the metallic basis.

Everybody agrees that bank-notes are a convenient substitute for metallic money; but they ought not to be regarded as if an addition to the currency. They save expense in providing the currency, but they ought not on that account to be regarded as a source of profit to the Treasury.

The writers who are opposed to the Act of 1844, assume that there can be, under any circumstances, a deficiency of currency, which I apprehend there cannot. There may be an excess of currency, as when paper, virtually irredeemable, is doing the office of gold; but there can be no corresponding deficiency of paper, because gold will always do the office of paper, or even command it in any quantity.

The remarkable instance of 1825, when the country was said to be within a few hours of a state of barter, was, strictly speaking, not a case of deficient currency, but of paper money suddenly discredited, much as if all the sovereigns current overnight were to be suspected in the morning of being copper.

Under the foregoing premises—I fear very badly expressed—it appears to me that the aim and efforts of the Legislature should be directed as follows:

1. Not to obtain profit from the paper money any more than from the coin of the country.
2. To render the one equally secure with the other.
3. To contract the paper money, rather than extend it, unless based upon gold; and,
4. In whatever degree not based upon gold, to require that Government stock shall be lodged for an equal amount.

When I question the good policy of the Government reserving any considerable profit out of the circulation, I am far from wishing that an over-remuneration should be left to the banks; what I mean is, that money, whether paper or coin, is not a desirable channel for taxation or revenue.

The three essentials are—

1. Government security for a given amount of issue.
2. The security of gold and silver in deposit for all the rest.
3. A liberal administration; that is, liberal to the public, or note-holder, although expensive to the issuer.

I would

I would prefer that the authority in the Act (Clause 5), for increasing the Bank of England issue on securities beyond the fixed limit, now 14,475,000 *l.*, should be no further availed of. Indeed, if the present position of the other issuers is maintained, I wish that limit could be reduced. Assuming it to be as it is now, I see no reason why the Bank of England should not pay to Government, or lodge stock (so as to be dispossessed of it), to the amount of 3,475,000 *l.*, in addition to the 11,000,000 *l.* already paid.

If this were done, the country issuers of England should pay or lodge stock in like manner to the amount of their issues; and, failing to do so, they should be required to discontinue issuing, and adopt the alternative provided by the Act (Clause 24), of compounding with the Bank of England.

The English public, or note-holders, would be thus protected from the calamity of insolvent issuers, by a natural-enough expedient of the Legislature, viz., requiring the issuers to apply some portion of their profit to the purpose of insuring their note-holders against accidents.

The circumstance of the Bank of England note being a legal tender, ought not to be a subject of any jealousy, being simply a public convenience without any profit or advantage to the Bank; but other issuers, giving security as proposed, might claim, fairly enough, that their notes should be receivable for taxes; and I see no reason to the contrary.

The paper money of Ireland and Scotland is a subject that raises all the questions as to 1 *l.* notes; should they be retained, or should they and can they be abolished as in England?

Not to enumerate the patent and universally-admitted objections to small notes, I would here only confute that popular and favourite delusion that a single piece of paper passing for a single piece of gold, can be of any use to anybody, unless the issuer.

The economy, in its proper sense, of bank notes, is that economy of time and risk which is obtained in conveying, by a single operation, the same sum of money as, by the alternative of coin, would demand a hundred or a thousand operations.

In Scotland, the proportion of about two-thirds, and in Ireland the proportion of about one-half, of the paper money, is in notes of under 5 *l.*

Paper money and coin of the same denomination are not likely to circulate in common. The paper, from some cause or other, turns out the gold; it always has done so, and always will. For a time, this might be a reason for abolishing the 1 *l.* notes and retaining those of 2 *l.* until a future period. The existence of peace, and the abundance of gold that is now poured into the country, seem to combine in presenting an opportunity for doing something in this direction.

To dispense with bank notes is so impossible, that if none were allowed to be issued except against a deposit of gold, they would still be used, and still be a cause of general economy, although it might cost, in some shape or other, 300,000 *l.* or 400,000 *l.* a-year to make them. Indeed, a currency of this kind, so safe and intelligible, might easily be preferred to the cheaper currency we now employ, so long as it remains open at some points to the danger of insolvency.

If these points could be strengthened in the manner I have endeavoured to suggest, we should enjoy throughout the United Kingdom a system of currency perfectly secure in all its parts, costing nothing, and working the same as regards exchanges, whether foreign or domestic, as if such currency were entirely metallic.

Believe me, &c.

T. M. Weguelin, Esq. (signed) *Alfred Latham.*

Henry Wollaston Blake, Esq.

My dear Mr. Governor, London, 5 November 1856.

I SHALL endeavour to state as shortly as possible the views I entertain upon the Banking Acts of 1844 and 1845, especially in reference to the questions contained in your letter of the 30th September.

The objects sought to be obtained by the Act of 1844 were twofold:

1. To insure at all times the convertibility of the bank-note into gold.
2. So to regulate the issue of such notes as to make the currency of the country fluctuate in the same manner, under the varying conditions of trade and commerce, as if it were wholly metallic, combining, at the same time, the advantages to the country of a paper currency, and the profits which may be legitimately derived from such a source.

I consider that the results of the working of this Act during the last 12 years have been decidedly satisfactory, and am, therefore, of opinion that it may be advantageously renewed.

I should not, however, be disposed to limit this renewal to so short a period as 10 years, considering that it is not desirable that the public mind should be periodically agitated, and questions involving changes in the laws, which regulate the currency, be frequently discussed, with a view to their alteration.

The amount of 14,000,000 *l.*, fixed by the Act as the extent to which notes might be issued against securities, appears to me to have been judiciously chosen, and although the working of the circulation since 1844, might seem to warrant some increase in the above amount, I do not think the question of sufficient importance or urgency to justify any alteration.

Appendix, No. 1.

H. W. Blake, Esq.

The events of 1847 may seem to indicate that the Act did not provide against the effects of internal panic; and that under circumstances of extreme pressure its provisions rather tended to aggravate the general alarm which then existed; and it might seem desirable that under such circumstances some power of relaxation should be given; but, on the other hand, the knowledge that such a power existed would tend to lessen the salutary provisions of the present Act; for its success depends on the certainty of their being carried out, and its wholesome effects and warning voice against over-trading are only felt through the agency of pressure. I am therefore not inclined to recommend any change in this respect.

In regard to the 5th Clause, by which the Bank is, in the event of any banker failing to issue his own bank notes, empowered to issue, on securities, an additional amount equal to two-thirds of such lapsed issue of these bankers, it appears to me that this power may be safely enlarged, to the full extent to which the country notes have been withdrawn.

In regard to the Scotch and Irish Banking Acts, I am not sufficiently acquainted with their working to offer any suggestions; but it seems desirable to prohibit, or at any rate to diminish the issue of notes of less denomination than 5*l.*; and I should also deem it advisable to make the Bank of England notes legal tender throughout the United Kingdom, or at all events in Scotland.

Yours, &c.

Thomas M. Weguelin, Esq., Governor of the Bank of England. (signed) *H. Wollaston Blake.*

To the Governor of the Bank of England.

Dear Sir, 3 November 1856.

Before we reply specifically to the questions which you have put to us, we think it expedient to advert to the objects of the Acts of 1844 and 1845. These objects we conceive to have been mainly the following:—

1. To render the paper money of the United Kingdom secure, convertible, and little liable to discredit.
2. To make it vary in amount like a metallic currency.

On a careful review of all that occurred since 1844 and 1845, we feel a conviction that the objects just referred to have been substantially attained, and that the note circulation has been in a far more satisfactory state during the last eleven years than during any former period. We are further of opinion, that the existing laws arm the Bank of England with sufficient powers to discharge all the public duties with respect to the circulation and support of credit that properly belongs to it.

We are of course aware that clauses may be pointed out in the Acts of 1844 and 1845, not consistent with their perfect symmetry and apparent completeness; but we do not conceive that these anomalies produce any inconvenience of real importance.

We are thus enabled to answer the queries put to us by saying—

1st. That we are not prepared to suggest any practical improvement in the Acts of 1844 and 1845.

2ndly. That we think it highly expedient for the public good that the existing currency laws should be re-enacted without any material alteration.

(signed) *Geo. Wde. Norman.* *Thomson Hankey.*
Kirkman D. Hodgson. *James P. Currie.*
H. H. Berens. *R. W. Crawford.*
Jas. Morris. *H. W. Blake.*
Jas. Malcolmson.

Benjamin Buck Greene, Esq.

My dear Mr. Governor, 10 November 1856.

B. B. Greene, Esq.

In reply to your note asking for my written opinion on the Banking Acts of 1844 and 1845, I beg to submit the following observations, confining them (as I conclude you intend) to the operation of the clauses which refer to the limitation put upon the issue of promissory notes payable to bearer on demand.

In reviewing the operation of the Act of 1844, I consider that it has worked well for the country, and has substantially answered the purposes for which it was passed; these being to render the paper issues of the kingdom secure and convertible, and to assimilate its action to that of a metallic currency.

I say substantially only, because convertibility has not been completely attained, owing to the failure of some of the country banks of issue.

Taking all circumstances into consideration, I am of opinion that it would be expedient to allow the Act to remain in force undisturbed.

But if its re-consideration be forced upon Parliament, with a view to making material modifications, then I should venture to suggest that provision be made for causing the entire issue of notes in England and Wales to merge into that of the Bank of England, either at once or by a gradual process. Such additional issue to be made against securities to the extent of two-thirds of the present authorised amount of the country circulation. The country banks to be compensated on some such plan as is provided for in the 24th section of the

the Act. The Government to receive the profit of such issue, after deducting the compensation allowed to the bankers, and the expenses attendant upon it.

B. B. Greene, Esq.

The paper circulation of the kingdom would thus be placed on a safe and satisfactory basis; the practical convertibility of every note secured, and the entire currency become legal tender.

Failing to carry such a measure as the foregoing, I am of opinion that every bank of issue should be called upon to deposit with the Government securities of the State for the full amount of its authorised issue; and thus, as far as practicable, secure the solvency of the notes, and establish a greater feeling of confidence in the public mind with respect to them.

As regards the amount of issue by the Bank of England against securities, now limited to 14,475,000 *l.*, I believe that a not inconsiderable portion of the public are favourable to its extension to 16,000,000 *l.* or more, and I am free to admit that there may not be much danger in fixing the limit at sixteen millions; still I consider the risk quite sufficient to induce me to prefer the present amount, particularly as the only permanent advantage to be derived from the extension would arise from the saving of some 25,000 *l.* or 30,000 *l.* a year; a sum totally inadequate, in my humble judgment, to be set against the remote, perhaps, but still possible contingency of serious consequences being produced by the public taking alarm in the event of the limit being rather nearly approached at a period of monetary pressure.

With regard to the Acts of 1845, applicable to Scotland and Ireland, I cannot say that I have much practical knowledge as to how they have worked; but it seems to me that the paper circulation of those countries ought to be put upon a sounder basis than at present exists.

This might be done by compelling the banks to deposit Government securities for the authorised amount of their issue, and by suppressing the issue of notes under 2 *l.* or 3 *l.*

As a matter of convenience it would, I think, be very desirable to constitute the notes of the Bank of Ireland a legal tender in Ireland; and the notes of some establishment in Scotland, or those of the Bank of England, a legal tender in Scotland.

I remain, &c.

T. M. Weguelin, Esq. (signed) *Benj. B. Greene.*

Francis Wilson, Esq.

Bank of England, 12 November 1856.

F. Wilson, Esq.

The Bank Charter Act of 1844 appears to have proved itself such an advance in legislation upon the laws affecting the currency of the country, and has gone through with considerable success several very severe ordeals, and those from different causes; that I should be unwilling to peril it by exposing it to the chance of fundamental changes which might prove serious injuries instead of substantial improvements.

I must, however, express my opinion, after careful watching of the practical working of the Bank Charter Act, and after the best consideration I can bring to bear upon the subject, that it would be an essential improvement to have a permissive power, upon the consent of the Chancellor of the Exchequer (or in any other way to be determined upon), for the extension of the issue upon securities to an extent and for a period specified, whenever the bullion shall have diminished to a certain defined limit.

My reason for desiring this power of temporary relaxation in extreme emergency, is the conviction that these large diminutions of the bullion occur, for the most part, from special causes, and which are continuously mitigating, and in the end adjusting themselves, after no long period; so that by such measure, the serious injury to commerce (more especially the tradesman) by the crushing rate of discount, the unnecessary temporary depression in almost all property, and consequently a monetary crisis, would be immeasurably lightened if not remedied.

When the subject of currency shall have become more of a science, having recognised principles and data to start from, further investigation into, and renewed discussion upon, the merits or demerits of the Bill of 1844 may be of real advantage to the country; but it appears to me that the first step should be, to fix what is meant by, or included in, the term "currency," upon which fundamental point, hitherto, nothing like common consent has been arrived at—nay, upon which point no two of the most competent authorities are agreed.

(signed) *Francis Wilson.*

James Malcolmson, Esq.

My dear Governor, King William-street, 11 November 1856.

J. Malcolmson, Esq.

I had the pleasure of receiving your esteemed note, requesting my sentiments on the Banking Acts of 1844 and 1845, when on the Continent, and having been otherwise much occupied since my return home, must beg you to excuse my so long delaying my reply.

I understand your desire is to have the individual opinions of your colleagues on these Acts, and any improvements that might be made in them; not on the wide and vexed questions of currency generally, on which we constantly hear more or less fanciful schemes propounded, unsuited to existing circumstances.

Appendix, No. 1.

J. Malcolmson, Esq.

The aim of the originator of the Act of 1844, was, I assume, to make the currency of this country approach as near as possible to what it would be if entirely metallic, which, in a great commercial community, is an impracticability.

I am of opinion that the Act has well and truly effected this object as far as within the power of legislation, and I desire to see it renewed in its integrity, rather than have another Act on different principles, however plausible they may appear; satisfied that many of the schemes above alluded to, however strongly they may at present be supported, would only lead to disappointment and repeated changes, than which, short of a convulsion, nothing is more injurious to commerce.

But while I anxiously desire the renewal of the Act, I wish the amount of Bank notes issuable on securities, to be considered; that is, whether the 14,000,000 *l.* (now 14,475,000 *l.*) is too high or too low. I never heard any valid reason for asserting that those figures were an essential part of the Act, or that they should never be modified.

My opinion is, though I state it with hesitation to those who are so much better informed than myself, that the amount is too low, and that, looking to the vast extension of commerce within the last ten or twelve years, stimulated by the gold discoveries, at least 1,000,000 *l.* or 1,500,000 *l.* might be added, and 16,000,000 *l.* with safety inserted on renewing the Act.

Those who expect that any system of currency would prevent dearness or scarcity of money (when intense, and exaggerated by public opinion, called panics) would be disappointed even were their own favourite scheme enacted.

Crises and panics will arise under any system, whether metallic or any other; and in my humble opinion, founded on long and extensive connexion with commercial affairs, I am satisfied the Act has greatly mitigated those that have occurred during its existence, and to which they were in no degree owing.

With these sentiments you will not be surprised at my desire to see the Act renewed, and its principle extended over the kingdom, either by an arrangement with the country bankers in the way of purchase of their rights, or otherwise, or by enactment, to take effect at a prospective date, so that the time may arrive when we shall have no other bank-notes than those issued in conformity with the great principles of the Act of 1844.

With regard to your last question, relating to Ireland and Scotland, I am aware there may be more difficulty than in England, in bringing the entire circulation of the United Kingdom into unison with those principles which I think have worked well as far as they have been carried in England. I would, however, urge that this great object be kept in view, even to the early prospective withdrawal of all 1 *l.* and 2 *l.* notes, in the future legislation respecting the circulation of the United Kingdom.

Believe me, &c.

Thomas M. Weguelin, Esq., (signed) *Jas. Malcolmson.*
Governor of the Bank of England.

John Oliver Hanson, Esq.—(Second Letter.)

My dear Governor, 4, Dorset-square, 19 November 1856.

J. O. Hanson, Esq.

Since my return home I have been enabled to consider more fully the queries you have put to me, and I think it more respectful to you, and more satisfactory to myself, that I should reply to them more at length than I have done, in the short letter I addressed to you from St. Leonard's.

The Banking Acts of Sir Robert Peel of 1844 and 1845 appear to me to have worked very successfully, by putting the circulation of the country, consisting of bank notes and coin, upon a sound basis.

The evils under the old system were apparent; and among the most prominent were, I think, the following:—

1. The want of an established rule, on the part of England and the country banks, for the management of their issues.
2. The unfair exemption of the Scotch and Irish banks from the expense and responsibility, while enjoying, at the cost of others, all the advantages of a metallic currency.
3. The facilities enjoyed by adventurers and speculators to found, at pleasure, banks of issue and joint stock banks.
4. The want of due provision for insuring the possession of *bonâ fide* capital by new joint stock banks; for the audit and publication of accounts, and of the names of shareholders, and other regulations of a protective nature.

These defects, under the old system, were plain and indisputable; and under the Banking Acts of 1844 and 1845 altogether disappear. Though the period of 1847 is often referred to by their opponents as a period when, as they state, the Bill of 1844 broke down, and the Government was induced to interfere to allay the panic then existing, it may be stated in reply, that the Bank of England still possessed the power of carrying out the Bill in its integrity, and that the panic was more from want of confidence in commercial houses, than from any real fear on the part of the public of the stability of the Bank itself.

This distrust, subsequent investigation proved to have been well founded, for most of the houses that were refused discount accommodation at that period and failed, were distinctly shown afterwards to have been insolvent for years, and would, no doubt, under similar circumstances, have equally failed under the old system as under Sir Robert Peel's Bill of 1844.

Notwithstanding,

Appendix, No. 1.

J. O. Hanson, Esq.

Notwithstanding, however, this exceptional period (if exceptional it may be called), looking to the period from 1826 to 1844, when, except within the London district so called, banking was practically free, and no limit was put upon the issue of bank notes; and comparing it with the period from 1844 to the present time, the latter appears to me to contrast most favourably with the former.

From 1826 to 1844, it is notorious we were subjected to perpetually recurring cycles of panic, bankruptcy, and confusion. In England, among other bank failures, the failure took place of—The Norwich Bank; Northern and Central Bank; Commercial Bank of England; North of England Joint Stock Bank; and the Bank of Manchester.

In Ireland:—The Southern Banking Company, and the Agricultural and Commercial Bank of Ireland, entailing much misery and distress on the agricultural population of that country.

In Scotland:—The Aberdeen Bank; Dundee Commercial Bank; Dundee Union Bank; East Lothian Bank; Fife Banking Company; Montrose Bank; Southern Bank of Scotland; and the Stirling Bank.

The latter period, from 1844 to the present time, has furnished comparatively few failures; the management of the banks generally having been prudent, their business prosperous, and their note circulation sound, because never redundant.

With these facts before me, I should regret exceedingly to see the principle of the Bills of 1844 and 1845 called in question, or in any way disturbed.

I see, however, no objection, considering the altered circumstances of the country, the large accumulation of capital, the increase of population requiring a somewhat higher amount of circulation, and the expansive character of our commercial transactions, why the present limit of 14,000,000 *l.* might not be safely increased to 16,000,000 *l.*

I remain, &c.

T. M. Weguelin, Esq. (signed) *J. O. Hanson.*

Bonamy Dobree, Esq.

B. Dobree, Esq.

My dear Governor, 6, Tokenhouse-yard, 5 November 1856.

In reply to the four questions put to me in your letter of the 30th September, I beg to state:

1st. That I have no suggestions to make with reference to the operation of the Act of 1844, which, with the reserve of an opinion upon one action of the Bill, I do not desire to see altered.

2d. I should deprecate all discussion of the banking question at this moment, and I would prefer that the re-enactment of the Bill of 1844 should remain subject to the notice as provided for in the 28th section of the Act of 7 & 8 Vict. c. 32.

3d. Is replied to by the foregoing answer.

4th. The Irish and Scotch banks being restricted in the amount of their circulation, unless based upon gold coin, I doubt very much the policy of continuing to them the privilege of an issue of notes against an equal amount of gold coin; and I should be of opinion that it would be desirable to assimilate the laws of Scotland and Ireland to that of England. The abstraction of gold coin from the Bank of England's reserve, as at present, in aid of the Irish and Scotch circulation in excess of their legalised issues, tends to increase the pressure in the money market, and which would to that extent be avoided if the Acts in question were repealed in that particular.

My reservation in answer to question 1st, has reference to the issue of notes on bullion beyond the amount issued on securities.

It has always appeared to me that the main object of the framers of the Act of 1844, was to secure the convertibility of the bank-note, and so to arrange as that the influx of gold bullion should have the same action and effect on the circulation of the country as would be produced were it actually in coin, instead of being represented by notes; and, secondly, to guard against violent fluctuations in the value of money.

Now, in my opinion, this latter object has failed to be attained by the Act of 1844.

The gold bullion has oscillated between 8,000,000 *l.* and 22,000,000 *l.*, whilst the active notes have ranged between 17,000,000 *l.* and 24,000,000 *l.*; thus showing a variation between the extreme points of 14,000,000 *l.* in the first, and only 7,000,000 *l.* in the last case; and these last referred to amounts were exceptional, the ordinary range being 18,000,000 *l.* and 22,000,000 *l.*, or a difference of but 4,000,000 *l.* in place of 14,000,000 *l.*

23 October 1847, 8,313,000 *l.*
10 July 1852, 22,232,000 *l.*
16 Dec. 1848, 16,736,000 *l.*
16 July 1853, 23,808,000 *l.*

The consequence of this has been that, in periods of over-abundance of gold bullion, the reserve of notes in the bank's till has risen to 14,700,000 *l.* notwithstanding simultaneous efforts to force the issue, and to lower thereby the rate of discount; thus giving a great impetus to speculation, and enhancing the value both of securities and produce: when, on the other hand, a drain of gold bullion has set in, and the reserve of notes fallen to under 2,000,000 *l.*, this has been attempted to be met by a rapid increase in the rates of discount, causing severe pressure in the mercantile interest, and followed by a marked decline in the value of the funds and of all securities, as well as in the price of all commodities.

26 June 1852.

Lowest reserve, 30 October 1847, 1,606,000 *l.*

These violent and sudden ebbs and flows, of which there have been various recurrences during the past twelve years, evidenced, in my opinion, by forty variations in the rates of discount, from 2 per cent. the lowest, to 8 per cent. the highest; whilst in the previous ten

Appendix, No. 1.

B. Dobree, Esq.

years there were but ten changes between 2½ per cent. the lowest, and 6 per cent. the highest; could not have been foreseen, I think, by the promoters of the Act of 1844, and act very prejudicially upon the trading community, for whose particular benefit and safeguard the Act would seem to have been specially framed.

One remedy, in my mind, would be found by relieving the Bank from the obligation of buying all gold bullion in exchange for notes at 3 *l.* 17 *s.* 9 *d.* per ounce.

Were the obligation removed, gold in seasons of plethora would find its own market value, or it would be taken to the Mint to be coined; and in this latter case the redundant circulation of the country would consist in coined gold, and not in Bank of England paper as at present.

I remain, &c.

T. M. Weguelin, Esq. (signed) *Bonamy Dobree.*

J. G. Hubbard, Esq., to the Right Hon. the Chancellor of the Exchequer.

Dear Sir George, Princes Gate, 28 November 1856.

J. G. Hubbard, Esq.

Your visit reminds me of my intention to communicate to you a few remarks supplementary to the paper upon the Act of 1844, which I placed in the hands of the Governor of the Bank for your consideration.

I ventured to suggest that the Government should, so far as England and Wales are concerned, carry out the provisions of the Act of 1844 (hitherto in action only permissively), and establish one uniform currency, the amount based on securities being that originally recognised by the Act, viz., 22,500,000 *l.*

The amount still issuable by the country banks under the authority of the Act, is in round numbers 8,000,000 *l.* I propose that these issues should cease, and that their beneficial interest assessed at 1 per cent. per annum be purchased by the Government.

The question then arises, "What should be the price?"

Assuming the value of a right of issue in perpetuity at thirty years' purchase on the net profit, and reasoning from the analogous case of the Bank of England (two-thirds of whose net profits on the Issue Department are taken by the State), ten years' purchase of their net profit of 1 per cent. on their authorised issue would be an equitable compensation for the country issuers; but as it should be an object to remove any ground of complaint or dissatisfaction on their part, the price might be raised to fifteen years' purchase.

The withdrawal of the country issues might be effected gradually, yet completely, within a period of twelve months. At quarterly intervals, returns might be made of the amount withdrawn, and to the same extent (say 2,000,000 *l.*) the Bank might enlarge its issues.

Assuming the country issues at 8,000,000 *l.*, the beneficial interest would be 80,000 *l.* annually, and the redemption at fifteen years' purchase would amount to 1,200,000 *l.* This sum the issuing banks might receive gradually, *pari passu* with the withdrawal of their own notes.

Of the 8,000,000 *l.* to be issued by the Bank, 3,000,000 *l.* or 4,000,000 *l.* (including the 1,200,000 *l.*) might be a direct loan to the Government; the residue, invested primarily, perhaps, in the securities parted with by the issuing country banks, would eventually be also represented by Government securities.

The result would be that the State would receive from the Bank the net profit annually arising from the extended issue of 8,000,000 *l.*, minus the interest of the 1,200,000 *l.*, instead of the stamp duty on the present country issues, and that the country would gain an uniform currency of perfect security.

The whole process of transition and compensation would be quite simple and easily accomplished.

Believe me, &c.

The Right Hon. Sir G. C. Lewis, Bart., &c. (signed) *J. G. Hubbard.*

Letter from *Thomson Hankey*, Esq., to the Right Hon. Sir *G. C. Lewis*, Bart., M. P.

My dear Sir George, Mincing-lane, 5 November 1856.

T. Hankey, Esq.

I have already replied to certain queries put to me by the Governor of the Bank of England in consequence of a communication from yourself, in which you express a wish to learn the opinions of the several Directors of the Bank respecting the continuance of the present Acts relating to the Bank of England, without material alteration.

I have given in my reply, by signing a paper conjointly with several of my colleagues, expressing a general approval of the existing Act relating to the Bank of England—considering, as I do, this Act efficient, as far as the Bank of England is concerned, for the purpose of carrying out the objects intended, and of which the principles were laid down by Sir Robert Peel in May 1844; and that perfect security is thereby afforded for the maintenance of the paper circulation of the Bank of England at the same value as if the whole circulation of England were not only based upon, but actually metallic—leaving the Bank completely unfettered in the management of its banking department, excepting the obligation to publish weekly a statement, showing, in an abstract form, the assets and liabilities of the Company.

I considered

I considered that, in replying to these queries, I was only called upon to express my opinion as a Director of the Bank as to how far I was satisfied with the existing Acts of Parliament, or whether, with reference to the Bank of England alone, I desired any and what changes to be made; and feeling satisfied that no changes affecting any question of principle were required or desirable, I readily expressed my general assent to leave the question in its present position.

If, however, any fresh legislation is now to take place on the subject of the currency, as generally regulated by the Acts of 1844 and 1845, I venture to express my own opinion to you that a renewal of those Acts, without some material alteration, is not consistent with the general principles laid down either by Sir Robert Peel or by Sir Charles Wood in 1844.

My objection to the Acts of 1844 and 1845 are, that whilst the principle of securing the convertibility into gold, as respects the issues of the Bank of England, is fully carried out, by requiring not only that all its issues above 14,000,000 *l.* be made upon bullion, but even the 14,000,000 *l.* be invested in securities of indisputable value, no such rule is made applicable with regard to the other issuing bodies in Great Britain. In England, the whole of the amount, considered to be 8,000,000 *l.* sterling, besides the limited amounts for Scotland and Ireland, is allowed to be freely dealt with by the issuing bodies, without the necessity of any investment as a security for the payment of the notes. My second objection to these Acts, on general grounds, is, that it is not wise to couple an Act for regulating the paper currency of Great Britain with other Acts relating to banking, which are not only distinct in their general principles, but which have really no sort of connexion; and by allowing the two subjects to be mixed in the same Acts of Parliament a constant confusion is kept up in the public mind, and a too common feeling is perpetuated, that the sound management of the currency of the country is connected with, or dependent upon, the prudent system of management adopted in the business of banking throughout the country, especially as regards the Bank of England, and that the good management of the one department depends on the good faith preserved in the management of the other—a confusion which leads to erroneous impressions, and which is calculated to do harm rather than good.

I think that any Act for the regulation of the paper currency of the country should be of a permanent nature, entirely distinct from the charter of incorporation of any bank.

I consider that the expediency of continuing these functions with the Bank of England rather than with any set of Commissioners to be named by the Government, is conclusively established by the arguments of Sir Charles Wood, in his speech in the House of Commons, in May 1844. I know that I unfortunately differ, not only from some of my colleagues, but from many influential persons unconnected with the Bank of England, in considering that at all times, and under almost any conceivable case, the action of the Bank ought to be governed by the same rule as would govern the proceedings of most well-regulated private banking establishments in Great Britain, by looking to their deposits, and to their deposits alone, as the source from which discounts can be satisfactorily provided, whether in a sluggish or active state of trade.

The capital of the Bank is the great security to the public for the safe deposit of the public money, and also to meet any losses which may occur in the management of the public debt; and although I am far from thinking it desirable that this capital should be so invested as to be unavailable for any emergency for which it may rightly be held as a security, yet I doubt the expediency of allowing it to be reckoned upon as available to supply the wants of the commercial world for discounting their bills or for making temporary loans. Whenever a pressure is brought to bear upon the Bank by an undue application for discount beyond a reasonable amount of its deposits, the sooner such a pressure is met by a rise in the rate of discount the better, not only for the safety of the Bank, but for the eventual interest of the trading community throughout the country; such a rise, although it may not produce the immediate effect, is certain, if steadily continued, to produce the result of diminishing the demand for the floating capital of the country, generally available for mercantile operations at home and abroad; and the power of raising the rate is a sufficient weapon in the hands of the owner of capital to protect him against any demand which would otherwise require him absolutely to refuse to lend money at all. These are the views I entertain respecting the position of the Bank of England, and with regard to the country issues of notes; and should they be in accordance with those entertained by Her Majesty's Government, I cannot doubt, but that such an Act might be passed as would place the whole question of the issue of paper money in Great Britain on a satisfactory and perfectly secure footing.

I am, &c.
(signed) *Thomson Hankey.*

The Right Hon. Sir G. C. Lewis, Bart., M. P.,
&c. &c. &c.

„ 1 December - - - - -	3,642,000	5 3/4	7	6	2
1841.—1 December - - - - -	4,873,000	5	3	12	–
1842.—1 December - - - - -	10,603,000	2 1/2	2	13	–
1843.—1 June - - - - -	11,566,000	2 1/4	1	14	–

It here appears that while the rate of discount adjusted itself with the utmost exactitude to the variations in the amount of bullion, there is observable in the general range of prices either a divided and conflicting movement, or, as in the later years, a very remarkable downward progress in the prices of the majority of articles, simultaneously with a very considerable enlargement of the amount of bullion.

TABLE (B.)—Showing the Amount of Bullion in the Bank of *England*, the Market Rate of Discount for Good Bills of Exchange, and the Prices of Fifteen of the Principal Articles of Commerce at the Beginning of the Months of March, June, September, and December, from March 1844 to December 1853.

As in the 10 years 1834–1843, so in the period 1844–1853, the upward and downward movements in the bullion at the Bank have invariably been accompanied with a decrease and increase in the loanable value of money advanced on discount; and as in the earlier period, so in this, the variations in the prices of commodities in this country exhibit an entire independence of the amount of circulation as shown in the fluctuations in bullion at the Bank of England.

J. G. Hubbard.

Appendix, No. 33.

Memorandum on Question 50.

The increase in the country circulation between 1851 and 1854 amounted to 1,000,000*l.*, or about one-sixth. This increase was accompanied by an increase in the consumption of notes of all denominations, at the Branches, of about one-fourth; thus,

	Number.		Number.
£.5 notes consumed in 1851	1,450,000	against in 1854	1,800,000
£.10 „	400,000	„	500,000
£.$\frac{20}{500}$ „	390,000	„	490,000

Appendix, No. 39.

PAPER presented by Mr. *Newmarch*, 5 June 1857.

BILLS OF EXCHANGE (INLAND BILLS), ENGLAND AND WALES.

STATEMENT of the Total Amounts Drawn or Created during each Quarter of the Twenty-four Years, 1830–1853, distinguishing the Three Groups of Small, Medium, and Large Bills; with a Collateral Column of the Rate of Interest in *London* on First Class Bills during each Quarter, and also of the Average Circulation during each Quarter, of the Notes of the Bank of *England*, and of the Notes of Private and Joint Stock Banks of *England* and *Wales*.

The Bills included in Group I. may be called Small Bills, and represent chiefly Drafts upon Small Retailers, and Drafts by Retailers on Consumers. According to the Bankers' Returns (that is, according to the Data collected, in the manner explained at p. 585 of the Sixth Vol. of the History of Prices), the Average Amount of the Bills in this Group is 22 *l.* 6 *s.*, and the Average Usance 3·14 Months.

Group II.—Medium Bills represent chiefly Drafts by Wholesalers and Manufacturers upon Retailers. The Average Amount is 127 *l.*, and the Average Usance 3·45 Months.

Group III.—Large Bills represent chiefly Drafts by Importers on Manufacturers and Wholesalers, and by Manufacturers and Wholesalers on Exporters. The Average Amount is 1,055 *l.* 18 *s.*, and the Average Usance 4·20 Months.

Note.—In all the preceding Columns (except Col. 6, Rate, &c.), the *four* figures at the unit end are omitted, thus 4·70 represents 4,700,000 *l.*

The Cols. 7, 8, and 9 of Bank Note Circulation are the average of the number of weeks ending nearest to the last days of the several quarters set forth in Col. 1.

The Stamp-Office Returns, from which the Bill Circulation in Cols. 2, 3, 4, and 5 is calculated, terminate strictly, on 5 April, 5 July, 10 October, and 5 January, but for the purposes of this Table, the Bill Circulation may be justly considered to correspond with the quarterly periods of the Bank Note Circulation.

The figures in col. 5 represent the total amount of inland bills drawn in England and Wales during each period of three months, 1830–53. The three groups composing those bills being drawn at average usance ranging from 3·14 months to 4·20 months, it follows therefore that having before us the total amount of bills *created* in each quarter of each year, we can only arrive at the average amount of bills in circulation at *one time* during the *whole* of each year, by applying with great care the element of usance. If, for example, the usance was precisely three months, the circulation of *inland* bills in England and Wales would be the amounts in Col. 5; but the usance is considerably *more* than three months, and therefore the inland bill circulation is *more* than is indicated by Col. 5.

I have explained elsewhere (*History of Prices*, Vol. VI. page 587–8), that as the general result of these inquiries, I have arrived at the conclusion, that at present (1857) the total bill circulation (inland and foreign) of the United Kingdom is constantly not much less than 180 *millions sterling*; and it is probable that it sometimes rises to 200 *millions sterling.*

The constant and close connexion between augmentations of the Bill Circulation and the occurrence of difficulties and pressure in the Money Market, is shown very clearly by the figures relating to at least six of the years included in the Table. For example:—

(1.) In 1836 the pressure which commenced in the autumn, led to an increase of the bill circulation of nearly 25 per cent., or from 65,000,000 in the quarter ended 5 July to 78,000,000 in the quarter ended 10 October 1836; and the amount of the bill circulation continued to range between 78,000,000 and 73,000,000 till the spring of 1837, when contemporaneously with a material fall in the rate of discount the bill circulation declined to 63,000,000 and 58,000,000.

(2.) In 1839 the amount of bills increased regularly with the rise of the rate of discount, until the bill circulation of 68,000,000 in October to December 1838, when the rate was 3½ per cent., rose to 82,000,000 in July to October 1839, when the rate was 6 per cent.

(3.) In October to December 1844, when the rate of discount was under 2 per cent., the bill circulation was only 59,000,000.

(4.) In October to December 1846, when the rate was 3 to 4 per cent., the bill circulation was 69,000,000; but it rose to 79,000,000 during the difficulties of January to March 1847, and remained at 75,000,000 to 78,000,000, till the removal of pressure by the Government letter of October 1847.

(5.) In

(5.) In July to October 1852, with a rate of 1½ to 2 per cent., the bill circulation was 63,000,000; but it rose to 84,000,000 to 88,000,000 during the pressure of August to December 1853.

Nor further does there appear to be any correspondence or similarity or connexion between variations in the note circulation, and the variations in the bill circulation: For example:—

(1.) In the quarter ended 30 September 1847, the *note* circulation was 26,580,000 *l.*, and the bill circulation 74,730,000 *l.* In the quarter ended 30 June 1849, the note circulation had fallen only half a million, or to 26,070,000 *l.*, while the bill circulation had fallen nearly 20 millions, or to 55,310,000 *l.*

(2.) In the quarter ended 30 September 1852, the *note* circulation was 30,390,000 *l.* and the bill circulation 69,520,000 *l.* In the quarter ended 31 December 1853, the note circulation was as nearly as possible the same (30,350,000 *l.*); but the bill circulation had risen 25 per cent., or to 86,690,000 *l.*

Globe Insurance, Cornhill, 5 June 1857. *Wm. Newmarch.*

Appendix, No. 40.

MINUTE of the COURT of DIRECTORS of the BANK, 19 February 1857, relative to the provisions of the Act 8 & 9 Will. 3, regulating the ELECTION of DIRECTORS. Appendix, No. 40.

At a Court of Directors, Bank of England, Thursday, 19th February 1857.

Resolved,

That the provision in the Act 8 & 9 Will. 3, c. 20, s. 52, viz.,

"That on all future Elections of Directors there shall not be chosen above two-thirds (2/3) of those who were Directors the preceding year," having been found very inconvenient,

The Governor be requested to endeavour to obtain an alteration of the law, so as to allow five-sixths instead of two-thirds to be re-elected.

John Bentley, Secretary.

Appendix, No. 41.

Appendix, No. 41. LETTERS from Managers of *Scotch* Banks relative to the Operation of the Bank Act of 1845.

BANK OF SCOTLAND.

Bank of Scotland.

Sir, Edinburgh, 25 November 1856.

Upon the 17th instant we had the honour of acknowledging your letter of the 15th November, and we now proceed to make some remarks upon the operation of the Act passed in 1845 for the purpose of regulating the currency of Scotland.

We are not of opinion that the banks of issue and deposit have any control over the circulation, which, as the name imports, is the action of the public; but they can increase or diminish their advances of capital made through discounts and loans. These fluctuations can occur in their business, irrespective of the currency, or, if conducted through that medium, can be effected with small variations in its amount, provided the circulation is rapid and is managed with economy.

Such being the case, we have not found that the Act of 1845 has been attended with any important results upon the business of this bank. For some period previous to 1845 we were in the practice of maintaining a reserve of gold, silver, and notes of the Bank of England, varying probably between one-fourth and one-sixth of our notes in the hands of the public. This reserve was independent of the amount of the bank notes in our London accounts, which is always considerable. Since 1845 our reserves of a similar description have varied from one-half to one-third of our circulation. The loss of interest upon this increased reserve is the only direct change which we have experienced from the Scottish Currency Act. We have understood that one object of the Act was the regulation of those fluctuations in price, which result from overtrading. Without entering on the abstract part of this question, it may be sufficient to point out that the deposits and capital (paid up) of the Scottish banks cannot, on a fair estimate, be less than 63,000,000 *l.*, whereas the gross circulation may be stated in round numbers at not more than 4,000,000 *l.*, which in our experience is in the proportion of about one in nine of the whole sum under loan, and returns in ten days. It seems to us that such a circulation, so managed as to be a sufficient medium for the operations connected with the large trading means of the Scottish banks, proves that the regulation of the advances of capital, not of the circulation, is the correct rule for the purpose of avoiding violent fluctuations in commerce and manufactures.

It may be proper to observe, that we now charge a commission upon the advance of money on accounts when we undertake to keep such advances at the disposal of our connexions, to be used by them or not, as may suit their convenience. This charge was first imposed two years previous to the passing of the Act of 1845, and was intended to remunerate the bank for the option which it involves. We notice it because it is charged upon many transactions, in what are called cash credits, which have this optional character.

We would therefore say, upon the whole, that, with the exception of the expense of the additional reserve of gold, the Act of 1845 has been inoperative as regards this bank, and that we do not think it necessary to make any further comments upon it.

The operations of the Scottish banks are not however confined to Scotland, as our transactions are finally balanced in London, where a large proportion of our most important business is conducted through our correspondents. We therefore propose to make some remarks upon the Bank Charter Act of 1844.

The 10th section of this Act has, we apprehend, produced an effect extremely favourable to the prosperity of Scotland. We have already pointed out the large means employed in Scotland by the banks for the encouragement of commerce, trade, and agriculture, and we may add, that at this period these means are so brought home to the door of every one that there are no less than 585 banking offices in the country, being in the proportion of one office to each 5,230 of the population.

The difference between the state of Scottish banking in 1844 and the present day, consists in this, that no new bank has been established since the Act of that year, and in consequence the excessive competition which then obtained, and which had the tendency to increase indefinitely the risk of banking operations, has now very much abated. The section refers to banks of issue exclusively; the practical effect has been what we have stated.

The inconvenience connected with the Bank Charter Act which we wish to bring under your notice, arises from the mechanical action of the 2d section.

Although

Although we do not admit what is termed the "Currency Theory," yet we considered that the Act of 1844 might be attended with good results, by enforcing self-reliance, and the maintenance of reserves upon bankers and merchants, and we are disposed to believe that this effect has in some degree been realised. But at a period of incipient discredit this provident disposition now rises to alarm, owing to the stringent provisions of the Act, and occasions hoarding. It seems to us that this is a fatal objection to the mechanical enactments, because in the proportion they are found to be inviolable will the alarm increase; and, on the other hand, it is equally clear that, if departed from once and again, they will become a dead letter. Appendix, No. 41. Bank of Scotland.

Taking into view, therefore, this point of experience, the delicate management required when a large importation of corn is necessary, and the inadequacy of a rise in the rate of interest to meet a high premium on gold connected with foreign demands, we are of opinion that when important cases of this description occur, they should be determined by the Board of Trade, under the recommendation of the Directors of the Bank of England.

It does not appear to us that a further issue of bank notes should take place against securities, but on looking back we are led to think that if the Bank had held an additional sum of 3,000,000*l.* of reserve since 1844, the position of that establishment would have been easy. We therefore believe that with this additional reserve (the cost of which we estimate at 100,000*l.* to 110,000*l.* per annum), with a vigilant and judicious administration in altering the rates of interest, and an appeal to Government in extreme cases, the Act of 1844 would be found satisfactory to the country.

It is of less consequence to remark, but we will also venture to say that the present publication of the state of the Bank's accounts must lead to false inferences, and, consequently, to unfounded presumption at one time and alarm at another, for the public cannot be acquainted with the whole truth bearing upon the Bank's position at any given period. If this information were given to Government, the state of the exchanges, the variations in the rate of interest, and such other notice as the course of the Bank's business might afford, would be a guide, so far as such indications can be made really useful; for it must always be remembered that, if reserves are not maintained by the individuals of the community, no notice can save them from serious loss and inconvenience at a period of discredit.

It is impossible to trace the latent action of the transactions of bankers and merchants upon the exchanges, although the result of agricultural deficiency is apparent when it occurs. It seems reasonable then that the Bank of England should receive some increased privilege from the country, if called upon to maintain a large reserve.

We should not have brought forward these remarks if we had not been honoured with your requisition, and if we had not found that our opinions on the Act of 1845 could not be stated fully and fairly without some reference to the Bank Charter Act. Neither should we have objected to a further trial of these Acts if they had appeared unobjectionable to Government, although we consider that those points in the Act of 1844 to which we have alluded must eventually be subjected to amendment.

The vast extension of trade, and the increased tendency to make London the centre of payments, seem also to point towards this conclusion.

The Right Hon.
Sir G. Cornewall Lewis, Bart.

I have, &c.
(signed) *Alex. Blair.*

ROYAL BANK OF SCOTLAND.

Sir, Edinburgh, 3 December 1856.

I HAVE the honour to acknowledge receipt of your letter of the 15th ultimo, in reference to the operation of the Act 8 & 9 Vict. c. 35, regulating the issue of bank notes in Scotland; and having laid it before the Directors, I am desired to inform you that in the opinion of this bank nothing has occurred in the operation of that measure to raise any doubt of the soundness of the principle on which the Act was founded, or to support the opinion entertained by some that the Act has placed undue restrictions on the power of the banks to accommodate the public. Royal Bank of Scotland.

But while entirely approving of the policy of the Act, it appears to us to be worthy of consideration whether the amount of circulation assigned to the banks in Scotland may not be enlarged with advantage to the community, and without detracting from the principle of the Act. This suggestion is founded not alone on the altered circumstances of the country and the great extension of commerce since the passing of the Act, but also on the fact that the averages which were adopted as the rule for fixing the authorised circulation of the banks were, from the cause to be explained, the minimum amounts of their issues at the time. The returns of circulation furnished previously by the banks, and from which these averages were deduced, had been made up immediately after the banks had mutually exchanged their notes, and when, consequently, their issues were at the lowest point. But it has not been found practicable to make the returns under the Act 1845 at the same point of time, and in this way the apparent circulation is increased by notes not in the hands of the public, but in the tills of other banks awaiting next exchange.

Should the authorised circulation of the banks be revised, it is submitted that in so far at least

Appendix, No. 41.

Royal Bank of Scotland.

least as regards any increase to be made, some effect should be given to the amount of paid-up capital of the different banks.

It would be a convenience to the banks, and a saving of expense, were the period for striking the averages extended to eight weeks. The large monetary transactions of Scotland, arising out of the transfer of land and landed securities, are settled in Edinburgh at the terms of Whitsunday and Martinmas, and a large issue of notes is required at these terms, not for general circulation, but to settle the transactions referred to. Generally speaking, these additional issues do not reach the public at all, but rest with the other banks till the following exchange. Were the averages extended as proposed, the returns of the circulation would not be materially altered, while the banks would escape the risk and expense of bringing gold from London to meet a mere temporary and exceptional exigency, unconnected with the real extent of their circulation, and which in many cases has immediately to be sent back.

I have, &c.

The Right Hon. (signed) *James Wright*, Secretary.
Sir G. Cornewall Lewis, Bart.

BRITISH LINEN COMPANY BANK.

Sir, Edinburgh, 25 November 1856.

British Linen Company Bank.

I HAVE the honour to acknowledge your letter of the 15th current, which I duly received and communicated to the Directors and principal officers of this bank.

I now beg to report to you that the opinions entertained here as to the operation of the Act 8 & 9 Vict. c. 38, are to the effect that all the provisions of the Act are very judicious and salutary, and well calculated to maintain a moderate amount of specie within Scotland in support of the paper currency.

So far as the experience of this bank goes, no inconvenience has been produced by the Act to the banks or to the public, and I take the liberty to express the hope that no relaxation or change will be made in its terms, lest its efficiency should be impaired.

I have, &c.

The Right Hon. (signed) *Tho. Corrie.*
The Chancellor of the Exchequer.

COMMERCIAL BANK OF SCOTLAND.

Sir, Edinburgh, 27 November 1856.

Commercial Bank of Scotland.

I AM instructed by the Directors of the Commercial Bank of Scotland to state, in reply to your letter of the 15th instant, that the Act of 1845 (8 & 9 Vict. c. 38,) regulating the issue of bank notes in Scotland, is a measure which, as a whole, has met with their approval, and it does not occur to them to suggest any alterations in its provisions.

Our Directors are of opinion that that Act, taken in conjunction with the provision in the Bank of England Charter Act of the previous Session of Parliament, prohibiting the formation of any new banks of issue, has worked well in practice, and has proved beneficial, not only to the banks themselves, but also to the general interests of the community.

Our Directors are aware that objections have been stated to the details of the measure, particularly in respect to the limitation of the issues of the various banks, and the obligation upon them to hold specie against any excess in such issues. But so far as this bank is concerned, our Directors do not complain of these provisions of the statute, and do not feel any hardship in holding specie as required of them by law. At the same time, if it shall seem wise to Her Majesty's Government to propose the relaxation of the law affecting the limitation of the circulation of the banks in Scotland, in consequence of the extension of the trade of the kingdom, our Directors can see no harm, as regards the safety of the public, in such modification of the statute.

Our Directors are strongly of opinion that any alteration in the present laws affecting banking in Scotland which would admit of excessive competition in banking, such as existed previous to 1844, would be highly injurious to the true interests of the public, by encouraging wild speculation, and extremely detrimental, probably most hazardous, to the numerous class of persons engaged, or who might be engaged, as shareholders in the Scottish banks.

There never was a period in which Scotland has made such rapid progress in improvement and material prosperity as during the 12 years since 1844. The banks have been fully able to give all due facilities to the extension of trade during that time, and have opened a great many additional offices throughout the country for the accommodation of the community. The competition of the various establishments has been very active, and every legitimate want of the public has been supplied.

The Directors of the Commercial Bank could not, therefore, approve of any measure calculated to make any important change in the principles of the existing laws affecting the practice of banking in Scotland.

I have, &c.

The Right Hon. (signed) *A. K. Mackenzie*, Manager.
Sir G. Cornewall Lewis, Bart., M.P.

NATIONAL

NATIONAL BANK OF SCOTLAND.

Sir, Edinburgh, 29 November 1856.

I HAVE received and submitted to the Directors of this bank the letter with which you have favoured me, dated the 15th instant, and am desired to say in reply to it, that nothing occurs to us to suggest in reference to the Scotch Issue Act, 8 & 9 Vict. c. 38, unless that it might be expedient to revise and extend the amount which each of the Scotch banks is at present authorised by certificate to issue, by assuming (as was done in 1845) the average circulation during the last twelve months as the basis of the new certificates. National Bank of Scotland.

Some parties appear to have an impression that the Act imposes unnecessary restrictions upon the banks, and thus restricts their ability to accommodate the public; but we have not found it so in our own experience, at least in any degree worth notice.

I have, &c.
(signed) *W. J. Duncan.*

To the Right Hon.
Sir G. Cornewall Lewis, Bart.

CLYDESDALE BANK.

Sir, Glasgow, 14 February 1857.

I HAVE the honour to acknowledge the receipt of your letter of the 9th instant, requesting the opinion of myself and those associated with me in the management of the Clydesdale Banking Company respecting the operation of the Bank Act of 1845 (8 & 9 Vict. c. 38), and that we would suggest any amendment of its provisions of which we might consider it susceptible. Clydesdale Bank.

After consulting the Directors of this bank, I beg to inform you that we are of opinion that the principle upon which the issues of the banks in Scotland was fixed under the Act of 1845 was erroneous, in respect that the issues allowed to each bank should have been regulated, not by the accidental circumstance of the amount of notes in circulation during the year ending 1st May 1845, but should have borne a given proportion to the paid-up capital of each bank. At that period the several banks having their head offices in Glasgow had been comparatively of recent formation;—the Union Bank having been in existence 15, the Western, 10, the Clydesdale, 7, and the Edinburgh and Glasgow and City of Glasgow, 6 years. Previous to the establishment of these banks, the whole banking business in Glasgow and the West of Scotland was conducted by agencies of the chartered banks, whose head offices were in Edinburgh, with the exception of some minor banks in Glasgow and neighbourhood, and all of which have since been merged in one or other of the Glasgow banks above-named.

While the commercial business of the West of Scotland and the operations of the banks established in Glasgow have largely increased, the Act of 1845 makes no provision for any increase in the wealth and business of the country at large, nor for the altered circumstances of the banks themselves.

The operation of the exchanges of bank notes among the several banks throughout Scotland, which are settled in Edinburgh twice each week, at once and effectually prevents an over-issue on the part of any bank.

Under these circumstances, we are of opinion and beg to suggest that the provisions of the Act should be amended in the following respects:—

1. That the principle regulating the issue of notes, under the Act of 1845, should be altered, and that it should be provided that each bank should be bound to hold a certain amount of gold and convertible Government securities, in such proportions to the gross amount of its circulation, from time to time, as Parliament may determine.
2. That the gold and silver coin held by the banks at their several agencies throughout the country should be taken into account in making the weekly returns of the stock of bullion held by each.

By the Act of 1845, we are precluded from considering and taking credit for any coin not in custody of the head office, as applicable to our over-issues, although it may happen that the excess of issue may have taken place at one of the branches, where a considerable portion of the gold may be lying.

While these are our views in regard to the Act 8 & 9 Vict. c. 38 (1845), we avail ourselves of this opportunity of bringing under the notice of yourself, and of the Government, the disadvantages under which the unincorporated joint-stock banks are placed by the operation of the Act for regulating joint-stock banks in Scotland, 9 & 10 Vict. c. 75 (1846), extending to Scotland the English Joint-Stock Bank Act, 7 & 8 Vict. c. 113.

I am desired respectfully to request your attention to these disadvantages, which are fully explained in a memorial presented to your predecessor, the Chancellor of the Exchequer, in 1853, a copy of which, with the opinions of counsel thereon, I beg to enclose, and to which there is appended a memorandum of the alterations made by Parliament on that statute since the date of the memorial.

 I am

Appendix, No. 41.

Clydesdale Bank.

I am also desired to state that a deputation from this bank (and I have no doubt from others similarly situated) will be happy to wait upon you at any time you may appoint, for the purpose of more fully explaining our views on the important subjects above referred to.

I have, &c.
(signed) *Geo. Readman.*

The Right Honourable
the Chancellor of the Exchequer,
&c. &c. &c.

MEMORANDUM of Alterations in the Statute 9 & 10 Vict. c. 75 (1846), for the Regulation of Joint-Stock Banks in Scotland, extending the Act 7 & 8 Vict. c. 113 (1844), to Scotland.

1. By statute 17 & 18 Vict. c. 73 (1854), s. 1, the right of retention or lien, competent by the common law of Scotland to a company making advances to a partner, is reserved to joint-stock banks, over the shares of partners, for debts due by partners to the bank, in the event of a bank taking a charter under the statute 9 & 10 Vict. c. 75.

2. By statute 19 Vict. c. 3 (7 March 1856), power is conferred on the Crown to grant letters of incorporation, under the statute 9 & 10 Vict. c. 75, either for a term of years or in perpetuity, in place of for a limited period of 20 years.

Unincorporated Scotch Banks.

THE following STATEMENT is submitted to the Chancellor of the Exchequer by the undermentioned Unincorporated Banks or Banking Companies in Scotland; viz.

The Union Bank of Scotland,
The Western Bank of Scotland,
The Clydesdale Banking Company,
The Edinburgh and Glasgow Bank,
The City of Glasgow Bank,

in order that the same may be laid before the Committee now sitting on the subject of the Bank Acts of 1844 and 1845:—

They beg to represent the very serious disadvantages which, from not being incorporated, they are by the Act of 1844, extended to Scotland in 1846, made to lie under, in comparison with other Scotch banks which had obtained charters of incorporation before the passing of these Acts, and from not being allowed to obtain incorporation, except by subjecting themselves to disabilities from which those other banks are exempt.

Previous to the passing of the Acts referred to there were five Scottish banks incorporated. At that period the amount of moneys required by public or private Acts of Parliament to be deposited in bank was comparatively insignificant, but it has recently been much increased under the operation of Drainage and Railway Acts, and especially of the Pupils' Protection Act, which has a very extensive application, and all of which Acts require that moneys having to be placed in bank shall be so placed in one that is incorporated. Thus an invidious and injurious distinction is created between the incorporated and unincorporated banks, although the one are not entitled to assume superiority over the other, whether as respects capital, credit, or respectability. Indeed, the injustice of the distinction has been tacitly acknowledged by Government, inasmuch as the Lord Advocate in all recent Bills affecting Scotland has permitted trust and other moneys to be deposited in any joint-stock bank of issue, whether incorporated or unincorporated. At present, too, the unincorporated banks cannot take or hold securities as a firm or copartnery, but only in the name of trustees for their behoof; and as those trustees are constantly changing, much inconvenience as well as risk and expense are incurred in keeping the securities available.

The unincorporated banks would naturally seek to remedy these evils by applying for charters of incorporation; but in doing so they are met by regulations which do not affect the banks that were incorporated before the passing of the above-mentioned Acts, and which if submitted to by the former would place them at a disadvantage as compared with their more fortunate neighbours.

The 6th clause of section 4, Act 7 & 8 Victoria, cap. 113, provides for the publication of the assets and liabilities of the company once a month. Could such publication be regarded as affording any true index to the state of a bank's affairs, there might be little objection to the requirement, provided the rule were made applicable to all banks alike; but the five chartered banks being exempt from it, publication by the others on obtaining charters would tend to lower them in status relatively to the former, and might possibly lead to more serious consequences. Such publication, however, affords no protection either to the public or shareholders, as is amply illustrated in the case of the Royal British Bank.

That there are no circumstances in their relative position warranting such distinction will be sufficiently evident on adverting to the present state of the banking establishments in Scotland, as exhibited in the Appendix to this Statement, from which it appears,

1. That the five chartered banks possess collectively a paid-up capital of 5,600,000 *l.*, while that of the five unchartered banks is 5,307,000 *l.*

2. That the chartered banks have, or had lately, an aggregate of 4,343 partners or shareholders, while the unchartered numbered at the same period 6,472 partners.

3. That

Appendix, No. 41.

3. That the chartered banks have 228 branches in various parts of Scotland, and the unchartered have 304.

Unincorporated Scotch Banks.

4. That the chartered banks have an authorised circulation of 1,593,413 *l.*, and the unchartered have an authorised circulation of 1,067,234 *l.*; while their actual circulation bears a much higher proportion—the latest returns (those of April 1857) being, chartered banks, 1,765,784 *l.*; unchartered banks, 1,530,080 *l.*

This statement does not represent the other seven unincorporated (banks) Scotch banks, partly because the capital of these companies, as well as their operations, are on a less extensive scale, and because, lying more remote from the centres of business, they feel less sensibly the hardship complained of. In so far, however, as they are exposed to competition with the chartered banks, their grievance is the same.

It may also be noticed that the five unchartered banks submitting this statement are principally Glasgow banks, while all the chartered banks have their head offices in Edinburgh; and it cannot but be deemed a hardship that the banking establishments of a city, which now ranks second only to London in commercial importance, should be denied equal privileges with those of Edinburgh, or at least that they should (in favour of the latter) be deprived by statute of rights which they originally possessed; for such is the result when deposits are compulsorily taken from them to be placed in any of the chartered banks or their branches. This consequence of the enactments complained of they now experience almost daily, and to a rapidly increasing extent, large sums as well as important operative accounts being continually withdrawn from them to be taken to a chartered bank, and often under circumstances most harassing and inconvenient to the parties who are compelled so to act.

In conclusion, it is humbly submitted that the present time affords a favourable opportunity for abolishing the objectionable enactments, and for introducing a measure which, while giving the public perfect safety, would place the banks in Scotland all upon the same level, and so cease to create distinctions which are unjustified by the positions of the respective establishments.

APPENDIX referred to in the foregoing Statement.

NAME.	Date of Establishment.	Amount of Capital Paid up.	Amount of Share Paid.	Number of Partners.	Number of Branches.	Authorised Circulation.	Actual Circulation, April 1857.

MEMORIAL for the Union Bank of Scotland and the Western Bank of Scotland, and Opinion thereon, by the Right Honourable the Lord Advocate and the Solicitor-General of Scotland.

THE Memoralists are desirous of procuring the opinion of the counsel for the Crown, relative to a question which has arisen under the English Joint-Stock Bank Act of 1844, which was made applicable to Scotland by the Act 1846.

By the Joint-Stock Banks Act of 1844, there are certain conditions stated on which charters are thenceforth to be granted; one of these is to the following effect:—That provision shall be made in the deed of copartnery, "for preventing the company from purchasing any shares, or making advances of money, or securities for money to any person on the security of a share or shares in the partnership business."

Now, to such a declaration the Memorialists have the greatest objections. It is unnecessary to point out here the nature of those objections, as they are fully detailed on page

second

second of the printed Memorial sent herewith. The Memorialists are willing that the common law shall be held applicable to them, as it is to all other companies where no special provision is made; and what they humbly maintain is, that such a declaration as that quoted, would in effect be, *quoad* them, altering the common law of Scotland. They do not wish a special provision in their favour, entitling them to make advances on the security of their stock, and they might also dispense with any general assignation of the shares held by partners for security of any debts owing, or obligations undertaken, by them to the bank; but, on the other hand, they cannot agree to a special provision which is to place them in a position so different from all other companies, and from the banks already incorporated. As, however, some doubts have been entertained, at least in England, how far the common law of Scotland does entitle a company there to hold its shares in security, the Memorialists are anxious to bring this matter under the notice of counsel.

The questions are,—

1. Supposing a shareholder of a Scotch joint-stock company (whether mercantile company or banking) is indebted to the company of which he is a partner, either individually in his own name, or as a cautioner for others, have the company a right of lien, or hypothec, over his shares for the amount of such debt, whether there be any clause in their contract of copartnery, giving them such right of lien or not?

This is the simple point on which the opinion of counsel is at present wished, in order that it may be communicated to the Board of Trade, so that the law on the question may be in the view of the Board when deciding upon the application of the Memorialists.

2. Should counsel hold that the Memorialists have rightly interpreted the common law of Scotland on this point, and Her Majesty's Government be disposed to relieve them from the disability which the Act imposes, the Memorialists conceive that, for this purpose, it might not be requisite to alter the Act itself, but rather to declare, by statutory enactment, that the clause in question should not affect, or be held to operate, any change of the common law of Scotland on that point, and counsel will please say, whether they would consider such a declaratory enactment sufficient for the purpose.

3. It has been maintained by some, that the clause referred to would not necessarily alter the common law, even as applicable to banks, but would merely prevent any special provision in their contracts, and that the clause itself strikes only against advances made directly and *per expressum* on the security of the stock or shares, not against advances made, or obligations undertaken, without any special bargain or reference to the shares; but the Memorialists cannot regard such a construction as conformable to the spirit of the clause in question, or the meaning with which it was passed, and they do not think it would be proper, in a question of this kind, either to allow such a doubt to exist, or to hazard the important interests entrusted to them on any uncertainty of the law. At the same time, the Memorialists would be obliged if counsel would state their views on this point also.

OPINION.

1. We are of opinion that, by the common law of Scotland, the stock or share of capital of a partner in an ordinary partnership, equally with his share of profits, may be retained in security, and applied in payment of any general advance made by the copartnery to the partner, or to another on his suretyship, and of debts becoming due otherwise to the copartnery by the partner; and we are of opinion, that the same rule of common law is applicable, and we apprehend is recognised and applied to the case of a partner of an unincorporated joint-stock company, which, in this respect, is not to be distinguished from ordinary partnership. We are, therefore, of opinion, that in the case put, of a shareholder of a joint-stock company (whether mercantile company or banking), being indebted to the company of which he is a partner, either individually in his own name, or as a cautioner for others, the company have a right of lien over his shares for the amount of such debt, whether there be any clause in the contract of copartnery giving them such right of lien or not.

2. We do not think that a declaratory enactment, such as suggested, would be a suitable mode of obtaining the object in view; and we apprehend that a statute would be required to relieve banking companies in Scotland from the obligation to insert the provision in question in the deed of partnership.

3. Without giving any decided opinion on the legal effect of the clause in question, as regards the common law right of lien or retention, we refer to our answer to the last query, expressing the practical result to which we have come.

The opinion of

R. Handyside.

Edinburgh, 9 February 1853.

Appendix, No. 41.

Unincorporated Scotch Banks.

Case for the Five Unincorporated Banks in Edinburgh and Glasgow, for the Opinion of the Lord Advocate of Scotland.

The accompanying copy of a memorial, recently presented to the Chancellor of the Exchequer, sets forth the nature of certain disabilities to which the Memorialists are exposed, in consequence of their not being incorporated by Royal charter, and the reasons on account of which they feel precluded from applying to obtain that status. They confidently hope that their representation will lead, either to a modification of the Act which at present regulates the granting of such charters, or to a removal of the disabilities in some other way. This they consider themselves entitled to expect as a matter of simple justice, and even of expediency, because the disabilities referred to, with the Acts which create them, have had their origin since the Memorialists were established as banking companies, and also because a continuance of such distinctions between them and the chartered banks, could not fail, sooner or later, to produce consequences injurious to both, as well as to the public at large.

7 & 8 Vict. c. 113.

But, besides the obstacles of a commercial nature, referred to in said memorial, which deter the Memorialists from applying for incorporation, there is one, the legal import and effects of which they do not fully apprehend, namely, that provision of the statute which limits to twenty years the duration of all incorporating charters or letters patent granted under it.

The Memorialists conceive that this provision involves the very serious question, whether, if they were to take out a charter, they would, on its expiration, be entitled to fall back on their present position, or would become extinct altogether, in case a renewal of the charter were withheld, or could only be obtained on terms deemed incompatible with their welfare? Thus, the Act declares, with regard to all banking companies originating after the 6th of May 1844, that before commencing business they shall apply for letters patent, and shall previously execute a deed of partnership, containing *inter alia* certain specific provisions therein expressed; while, with regard to companies then in operation (being the case of the Memorialists), which are not affected by the statute until they place themselves under it by applying for letters patent, it is declared, that "if, upon their compliance with the provisions hereinbefore contained, with respect to companies formed after the said 6th day of May, Her Majesty shall be pleased to grant them letters patent under this Act, as aforesaid, it shall be lawful for them thereafter to carry on their trade and business of bankers, as aforesaid, according to this Act, and not otherwise;" and the directors are empowered (with consent of three-fourths of the shareholders) to execute a new deed of partnership on behalf of such company, a copy of which deed shall be annexed to the petition for letters patent; and if the same be granted, it is declared that "all the shareholders of such company, at the time of the grant of such letters patent, shall be deemed to be incorporated under such letters patent, and to be the first shareholders in such incorporated company."

ss. 1, 2, 4, and 5.

Section 45.

The Memorialists are somewhat uncertain whether, by this section of the statute, it is made imperative or only permissory, for banks which were in operation before the 6th of May 1844, to execute a new deed of partnership. If imperative on them to do so, it would seem to follow that the special provisions before alluded to, must be inserted in such new deed; but if only permissory, then their existing deeds of partnership might, it is presumed, remain unaltered, and in that case it would not apparently be requisite for them to come under the obnoxious provisions which are referred to in their memorial, unless that were insisted on by the Board of Trade. If the statute shall be held to admit of this latter interpretation, the Memorialists' only remaining difficulty would be as to the terminable nature of such charters or letters patent; and on this head the Memorialists cannot help feeling that, even if they could maintain a continued existence after the charter had expired (notwithstanding the expression above quoted, that, on obtaining a charter, they should "carry on their trade and business of bankers according to this Act, and not otherwise,") still, if a new deed of partnership must be executed, that circumstance would strengthen the doubt entertained, whether they could revert to their present position and privileges as bankers, including the privilege of issuing notes, which is denied to all banks established after 6th of May 1844, or thereafter ceasing business "from whatever cause." If they could not do this, they are at a loss to know where they would be, or on what footing they would stand, in the event of a renewal being withheld, or proffered only on terms to which they could not subscribe. Such an uncertainty might be fatal to their welfare as the period of termination drew near; at all events, it would be of too serious a nature for them to hazard interests of such magnitude and importance upon that basis. They therefore desire to be favoured with the opinion of the learned counsel upon that subject, and more especially on the following queries:—

Vide 7 & 8 Vict. c. 32, ss. 10 and 12.

1. In the event of the Memorialists applying for and obtaining a charter or letters patent of incorporation, which, by the statute, would determine in twenty years, could they, on the arrival of that period, maintain a continued existence as bankers, by reverting to their present position, or on what other footing would they stand, supposing that a renewal of the charter were to be withheld, or were offered only on terms to which they could not accede.

2. Do the provisions of section 45 make it imperative on the Memorialists, when applying for a charter, to execute a new deed of partnership, and containing the specific clauses prescribed by section 4th, in the case of banks originating after 6th

6th May 1844, or is it only permissory to do so; and, in the latter case, must the special clauses referred to be inserted in such new deed of partnership, or in the charter, if granted?

3. Do the provisions (particularly the 1st provision) of the Act 9 & 10 Vict. c. 75, which extended to Scotland and Ireland the operation of the statute 7 & 8 Vict. above referred to, in any degree alter the construction of the latter as respects Scotch banks?

OPINION.

I am of opinion that the Memorialists, under the statutes referred to, could not obtain a charter of incorporation to endure for more than twenty years; and, with reference to the answer I have to make to the second query, I think it very difficult to say, that, in the event of that charter not being renewed, the Memorialists could fall back upon their present position, and enjoy all the rights and privileges to which they are now entitled as existing companies and not affected by these statutes. In the event of a renewal of the charter being refused, it would not be easy to say in what situation the Memorialists would stand, or whether they could continue their copartnery, in case of difference of opinion among the copartners as to the propriety of applying for a new charter, or continuing the business of banking; and, on the whole, I feel those difficulties so great, that I am disposed to advise the Memorialists rather to forego the benefit of a charter than to subject themselves to the disadvantages that might arise from bringing themselves under the provisions of the Act, and trusting to the renewal of their charter.

2. I am of opinion, that the Memorialists, if they should apply for a charter in terms of the statute, would be under the necessity of making such alterations upon their contract of copartnery as would be requisite to bring them within the provisions of the Act; this is clearly, under the statute, a condition to their obtaining a charter; in that respect the Act is imperative. It is permissive only in respect of permitting the directors to execute the new contract for and on behalf of the whole company.

3. I think not, in the matters here referred to.

The opinion of

Edinburgh, 9, St. Colme-street, 18 February 1850. *And. Rutherfurd.*

UNION BANK OF SCOTLAND.

Sir, Glasgow, 14 February 1857.

I HAVE had the honour of receiving your letter of 9th current, requesting the opinion of the gentlemen connected with this bank, respecting the operation of the Act of 1845, regulating the issue of bank notes in Scotland, and, in reply, I have to state that their opinion is, that while that Act cramps the action and diminishes the usefulness of the banks themselves, it was not demanded, and is not regarded by the public, as affording any guarantee for the safety of their transactions with the banks.

At the time the Act was passed there were, as you are no doubt aware, five banks having their head offices in Edinburgh, which had all been incorporated by Royal Charter or Act of Parliament long before; and there were also five banks having their chief offices in Glasgow, all of them of comparatively recent origin, but carrying on business in successful competition with the older establishments, although none was possessed of the privileges of incorporation. The older banks had been occupying their respective grounds of operations for very long periods indeed before the Act became law, and each had thus secured a circulation adequate to its wants, but the younger establishments which had been called into existence, some of them only a few years before, to supply the accommodation required by a rapidly increasing mercantile community, were met by the Act at a period of their career too early to enable them to calculate what amount of circulation they would need, far less to entitle them to claim that amount. The progress of the Glasgow banks has been very great since 1845, and, as that progress may be taken as a true indication of the increased banking requirements of Glasgow and the country generally, it is submitted that the time has arrived for taking a new average, and, with that, for considering the propriety of allowing the excess of issues to be represented by Government securities, as in the case of the Bank of England, to a certain extent.

I crave permission to take this opportunity of bringing under your notice the great disadvantages under which the unincorporated banks have laboured since the Act of 1844, entitled "An Act to regulate Joint-stock Banks in England," extended in 1846 to Scotland, as compared with the banks chartered before that date, and of saying that it is to this Act that the objections of the gentlemen directing this bank chiefly apply. This Act, while it left untouched the already chartered banks, created certain restrictions and imposed certain forms upon all banks seeking to be incorporated thereafter, which have all along been felt by the unincorporated banks to be very serious grievances, establishing, as they do, invidious distinctions between different establishments carrying on the same business, and equal in all respects the one to the other. For instance, were this bank to accept a charter under the existing law, it would require to publish a monthly return of the state of its

Appendix, No. 41.

Union Bank of Scotland.

its affairs, and to get its accounts audited annually. No such regulations are imposed upon the Edinburgh banks. It is not my wish, and it is far from my intention, to say one word in disparagement of the chartered banks, but, writing in behalf of a bank equal to any of them, whether in regard to deposits, circulation, capital, or proprietary, it is no more than reasonable to express a hope that the same law, whatever it be, should be made applicable to all, and that if it is deemed expedient for public safety that one bank should be obliged to publish and be subjected to an audit, all banks of issue should do the same. Apart altogether from the question of the soundness of the law, it is surely no more than justice to seek that we may all be placed on the same level, and that, if one bank is sheltered from its operation, another should not be subjected to it, merely because the one can point to a charter dated before 1846 and the other cannot. Without, however, arguing this point farther, I would simply add, that the obnoxiousness of the existing law is amply proved by the fact that, although some of its provisions have been modified in consequence of repeated representations of their objectionable character, no bank in Scotland has yet subjected itself to its operation. They prefer the many disadvantages resulting from the want of incorporation to having themselves singled out as the possessors of charters so different from those of their no more wealthy or responsible neighbours.

I send enclosed copy of a memorial laid before Mr. Gladstone, when Chancellor of the Exchequer, and I shall be happy to wait upon you at any time you may appoint, if you desire a personal interview for the purpose of giving you such farther information as you may wish.

I have, &c.
(signed) *Ja. Robertson*,
Manager.

The Right Hon.
Sir George Cornewall Lewis, Bart.

EDINBURGH AND GLASGOW BANK.

Sir, Edinburgh, 20 February 1857.

Edinburgh and Glasgow Bank.

I HAD the honour to receive your letter of the 9th instant, intimating that the Bank Acts of 1844 and 1845 will come under the consideration of Parliament during the present Session, and requesting the opinion of the Directors of this bank as to the operation of the Act of 1845 regulating the issue of bank notes in Scotland, and to suggest any amendments which they may consider necessary on its provisions.

Having laid your communication before the Directors, and advised with them on the subject, I am to state that, assuming the principle of that Act to be fixed, they have no alterations to suggest on its provisions, which give full effect to the principle on which it proceeds. But prior to the passing of that Act, as you are no doubt aware, there was no restriction on the issue of bank notes in Scotland. The Act for the first time introduced such restriction in Scotland, by fixing the amount of each bank's issue at the average of the previous year, and requiring gold for all beyond that limit.

This restriction is considered by the Directors of this, as well as of the other banks of recent origin, inequitable in its application to them. The older banks obtained under that Act certificates for a much larger circulation, although not having larger capitals, and thus have a very great advantage and facility in the conduct of their business, while a greater proportionate expense is thrown upon the younger establishments.

It is also unnecessary as a protection against over-issue. By the admirable system long pursued in Scotland for the regular exchange by the several banks with each other of their respective notes, a complete check is placed upon the possibility of such over-issue. The exchange of notes takes place twice a week in Edinburgh and Glasgow, and once a week all over Scotland; and the balances arising on such exchanges are settled for in Exchequer bills or by bill in London. A large amount of Exchequer bills are held in Scotland for the purpose of meeting these exchanges; and should the bank against whom the balance arises not hold Exchequer bills sufficient to meet such balance, it must be settled by bill on London. Thus, any issue of notes beyond the legitimate demands of trade, must be immediately met by capital in the hands of the bank's London agents. The provision, therefore, for holding gold against the issue beyond the amount in the certificate is unnecessary and troublesome in its operation, as any amount beyond that limit must be required by the trade of the country, and cannot be in excess. They are therefore of opinion that, as formerly, each bank should be allowed, in the exercise of a wise discretion, to hold only so much gold as shall be thought necessary to meet the ordinary contingencies of trade, and any extra demand for gold, without the necessity of holding a fixed amount in regard to their issues.

No doubt the removal of such limitation would cause a considerable quantity of gold to find its way to the Bank of England, where the restriction is alone needed and useful, and would increase the ability of that establishment to discharge its functions under the Bank Charter Act by the amount of gold thus liberated. The Bank of England, from its magnitude, Government connexion, and privileges, has become the centre of the monied interests of this country, and in consequence of that position can alone act with effect on the foreign exchanges, so as to control undue speculation. On the other hand, the trade of Scotland may be said to be local, and uninfluenced by the foreign exchanges, except through the

action

action of the Bank of England. Besides, by the system pursued in Scotland, above explained, over-issue not only cannot exist, but the circulation is actually reduced to the smallest amount necessary for the legitimate wants of the community, as fully and completely as if it were a metallic currency—a result which is obtained without any appreciable expense, while that of a metallic currency is burdensome and expensive to the community.

Should Government not see its way to a change of the principle of the Act, some relief might be afforded by extending the authorised circulation to the average of the past year, and making the issues beyond that extended limit against gold, as at present; or, perhaps, instead of gold, which lies useless and unproductive, the extra issue might be against Exchequer bills or bonds. The greatly increased trade of Scotland since the passing of the Act of 1845 would be benefited by such extension, and would secure to the country a cheap circulating medium, and an economical system of banking, which Scotland has hitherto enjoyed with great advantage and safety.

Although not embraced in your communication, yet from intimate connexion therewith, the Directors would respectfully bring under your notice the provisions of the statute 9th & 10th Victoria, c. 75, regulating the incorporation of joint-stock banks in Scotland. That statute renders the English statute of the previous year (7 & 8 Victoria, c. 113) the regulating statute for Scotland. All the banks in Scotland having their head offices and principal place of management in Edinburgh, except this bank, have charters; and but for that statute, this bank might have had a charter on the same terms as the others. Indeed, the Directors had applied for a charter, and had their petition passed by the Board of Trade some time previous thereto; but owing to the changes in Government, and consequent delays thereupon, did not get it finally adjusted before the discussion which preceded the passing of that statute. To accept of a charter under it would place this bank in an anomalous and invidious position in contrast with other chartered banks who do not require to comply with its provisions. There is no good reason for this distinction; and the hardship is increased, in consequence of the many additional privileges conferred on chartered banks to the prejudice of the unchartered, in respect to the various funds which, by recent legislation, must now be deposited in chartered banks. On this subject the Directors would respectfully refer you to the accompanying copy of a memorial which was submitted to your predecessor in office in 1850, in which this grievance, under which this bank as well as other unincorporated banks labour, is fully pointed out; and they trust that Government will give the subject due consideration.

I have to thank you for having afforded me this opportunity of addressing you, and have, &c.

The Right Hon. (signed) *Chas. Jas. Kerr*, Manager.

Sir G. Cornewall Lewis, Bart.

WESTERN BANK OF SCOTLAND.

Sir, Glasgow, 14 February 1857.

I HAVE the honour to acknowledge receipt of your letter, dated the 9th instant, requesting that after consulting the other gentlemen associated with me in the management of the Western Bank of Scotland, I would give you our opinion on the operation of the Act of 1845, regulating the issue of bank notes in Scotland, and suggest any amendments of which we consider it susceptible.

In compliance with your desire, I shall, briefly, lay before you our views on the subject.

When the continued drain for gold on the Bank of England, in April and May 1854, had excited alarm, and produced great stringency in the money market, I ventured to address two letters to Mr. Gladstone, then Chancellor of the Exchequer, suggesting such modifications of the Act as I thought calculated to relieve the pressure to some extent. And again, in December 1855, when a similar state of things occurred, the five Glasgow banks addressed a joint letter to yourself, as Chancellor of the Exchequer, in which the same suggestions were respectfully submitted for your consideration.

I beg to send herewith copies of all these letters, and to refer you to them, as containing the outline of those amendments of the Act of 1845, which we consider most essential.

These are briefly, first, a revision of the "Circulation Returns for Scotland," up to the present time, with a view to render the amount authorised by law more adequate to the increased and legitimate wants of the country; and, second, a permission to the Scotch banks to hold Government securities, for a certain portion of the excess of their actual over their authorised circulation, instead of being compelled to hold gold for the whole amount of such excess.

As the law of convertibility of the bank note into gold, on demand, will continue, a certain relative proportion of gold must always necessarily be held.

With reference to the first amendment suggested, I beg to observe that the amount of circulation of bank notes for Scotland, authorised by the Act of 1845, was founded on an average of returns for a period when the country was just emerging from a series of years of depression, and when the prices of produce were very low.

The basis on which it was taken was accidental, and not uniform, and had no reference to the amount of paid-up capital of each bank. It was made after the completion of those bi-weekly exchanges of notes among the Scotch banks which, it is well known, temporarily withdraw, at least, one million from circulation. At the time the Act was passed, several

Appendix, No. 41.

Western Bank of Scotland.

of the Scotch banks, especially those in Glasgow, had been, comparatively, only a few years in existence, and the development of their business has consequently been seriously affected by its restrictions.

The "Circulation Returns for Scotland," made subsequent to the Act of 1845, and up to the present time, although framed with the view of exhibiting the minimum amount, still show an average (on the returns of the last three or four years) of about one million over the amount authorised by that Act. If the returns were framed to exhibit the maximum amount, or the amount actually in circulation before the completion of those bi-weekly exchanges, then the average would be nearly two millions over the amount authorised by the Act.

This proves that that amount is inadequate to the natural wants of the country, and that our expanded trade, the enhanced cost of labour and produce, the multiplication of commercial transactions, now require a larger measure of representative value.

With reference to the second amendment suggested, I may remark that as the Bank of England's issues are mainly based on Government securities, there would be no violation of principle in granting permission to the Scotch banks to hold a certain proportion of Government securities, instead of gold for the excess of their issues beyond the amount prescribed by law.

The Scotch banks would be benefited by holding a profitable for an unprofitable investment. The public would be benefited by being equally well secured, and by obtaining money at a cheaper rate of interest; and the amount of gold thus liberated would be available in our foreign exchanges.

As I have said a good deal more on this point in my second letter to Mr. Gladstone, a copy whereof is enclosed, I will not enlarge, but simply refer you to it.

These views and opinions are submitted to your consideration with the greatest deference, and are open to discussion and criticism.

But, before concluding, I would most earnestly and respectfully seek to impress you with the importance of having the banking laws of a country uniform.

Now, that is not the case in Scotland. I beg to remind you that there are certain banks in Scotland incorporated by charters, of various kinds and dates, possessed of exclusive privileges.

I take the liberty to send herewith copy of the memorial of the unincorporated Scotch banks on this subject, presented to Government in 1853, and I crave your attention to its statements.

It is true that since that period such modifications have been affected in the law as would enable the Memorialists to obtain charters; but not on the same, or on equal terms and conditions. And it is to to this point I wish to call your special notice. If it be thought desirable that a bank's books and accounts should be examined and verified by auditors, and that the amount of its assets and liabilities should be published in the "Gazette" once a month, let the enactment apply to all banks alike, and let there be no invidious distinction made by the law.

Should further information on these important questions be desired, I shall be happy to furnish it if in my power, or a deputation from the Glasgow banks will be ready to wait upon you whenever you signify your pleasure to receive it.

It would be most desirable to have some Scotch Members on the Committee to be appointed to inquire into the banking and currency laws affecting Scotland, and I hope I am not presumptuous in mentioning the names of James Baird, Esq., Peter Blackburn, Esq., and Alexander Hastie, Esq., as gentlemen who would be likely to attend, and who understand, and would watch over our interests.

I have, &c.

The Right Hon.
Sir G. Cornewall Lewis, Bart.

(signed) *John Taylor*, Manager.

Letters from *John Taylor*, Manager Western Bank of Scotland, Glasgow, to the Right Honourable *William Ewart Gladstone*, &c., &c., &c., Chancellor of the Exchequer.

Western Bank of Scotland, Glasgow,
27 April 1854.

Sir,

Three millions of gold thrown at once into the Bank of England would inspire confidence, and materially aid your financial schemes.

So modify now (what must be done next year) the enactments of the Scotch and Irish Banking Act, as to enable us to hold "Government securities" (such as your "Exchequer bonds") for at least a certain portion of the specie which we are now compelled to hold for the excess of our issue over our "authorised amount" in 1845.

The Irish banks could spare two millions and the Scotch one million of specie without danger. It is possible that, with the fear of a "run for gold," which has happened in my own time in Ireland, the Irish banks might ask for some substitute of a "legal tender." That you must devise. In Scotland I do not think we have any such contingency to fear or to provide for.

The chief basis of the issue of the Bank of England is on "Government securities." In allowing the Scotch and Irish banks to do the same, you violate no principle, and while you would thus confer a boon on the banks, by giving them interest on a part of their capital now unprofitable, you would enable us to deal on more liberal terms with our customers, and also relieve the pressure on the public.

I do

I do not pretend that any of my suggestions are new. I entertained and expressed similar opinions many years ago. But the financial state of the Government, the position of the Bank of England, the altered circumstances in which we are placed by war, induce me to approach you, and to say, frankly, that as far as I know the public mind of the country, the views which I have faintly shadowed forth are generally entertained and approved.

I end, as perhaps I ought to have begun, with an apology and a preface; but your time is precious, and you are thoroughly acquainted with the whole bearings of the topics touched on. Pardon a hurried letter, but do not, if there is any virtue in the idea, fear to act, and to act at once.

I have, &c.
(signed) *John Taylor.*

Western Bank of Scotland, Glasgow,
8 May 1854.

Sir,

In compliance with your desire, conveyed through Mr. Wilbraham, under date of the 4th instant, I beg to submit the following views and opinions on the subject touched on in my letter to you of the 27th ult.

The circulation of the Scotch banks, under the Act of 1844-5, as authorised by certificate, is 3,087,209*l.*, an amount based on the average of a given preceding period, and on returns made by the Scotch banks at the end of each week, and after their bi-weekly exchange of notes had been made.

This fact alone affected the average (actual) circulation to the extent of 500,000 *l.* In other words, if the average had been taken on the maximum amount of notes in circulation before these exchanges, instead of on the minimum amount after, the amount authorised by certificate would have been probably about 3,600,000 *l.*

If revision on this point is important, how much more essential now in the year 1854 to revise the basis of the returns on which our "average circulation" is founded.

The extended commerce of the country, the enhanced cost of labour and materials, the multiplication of transactions—all requiring more expanded aids and representatives—emphatically demand a revision of the measure no longer applicable to their increased growth, and which, worse than the bed of Procrustes, would cut off both head and legs.

The average circulation of the Scotch banks, as published in the last "Gazette," that is, for the four weeks ended the 15th April 1854, was 3,834,098 *l.* Bear in mind that this amount also is founded on returns made after the weekly exchanges are completed, and, therefore, to arrive at a just conclusion of what the actual circulation of Scotland is, you must add the relative amount of notes retired at the two weekly exchanges, which cannot be less than 800,000 *l.*, therefore making the real circulation about 4,600,000 *l.*

Now, the specie held for the excess of the average circulation above the authorised issue did not require to be more for the period ending 15th ult. than the difference between - - - - - - - - - £. 3,834,098

Which was the average, and - - -		3,087,209
Which is the authorised		
	Or -	746,889
Whereas it actually was - - -		1,448,230
	Surplus, £.	701,341

beyond the requirements of the law.

You naturally ask why the prudent and economical Scotch banker does not calculate more closely and more profitably.

Remember the occasional great expansions of his circulation before the exchange days, and which he cannot always certainly know, will then be contracted. He is compelled, therefore, to keep an extra sum in specie to meet these contingencies. Again: The publication of his returns makes him amenable to public opinion, and the "reserve" which he shows affects his character and influences his standing.

Moreover, the law imposes a penalty for any violation of its enactments.

All these considerations will explain the apparent anomaly of such an excess of specie being held.

With these facts before you, permit me to refer to the letter which I took the liberty of addressing to you on the 27th ult.

I then had chiefly in view such a modification of the Act as would permit us to substitute "Government securities" for "specie," as a legal provision for our excess of actual over-authorised circulation.

In my plan I embraced both the Scotch and Irish banks. You ask my opinion only about the Scotch, and therefore I restrict my observations now to that point.

I have shown that the Scotch banks have at this moment nearly a million and a half of

Appendix, No. 41.

Western Bank of Scotland.

specie lying in their vaults useless and unprofitable for any ordinary or practical purpose. Gold is never required in Scotland. The people do not like it as a circulating medium. "Runs" for it are nearly unknown. Neither commercial panics nor political struggles are likely to affect the Scotch in this way. I think, therefore, you may safely legislate on the principle that if the banks in Scotland can show in their published returns that they hold valid Government stock for all or any portion of their excess of circulation, the remainder being made up of specie, the public will rest perfectly satisfied, and give you credit for your sagacity in remedying a palpable evil.

I said in my letter of the 27th ult., that the Scotch banks could spare one million of specie; assuming that the alteration in the law enabled us to convert four-fifths of our specie into Government securities, my calculation is within limit.

At this moment I hold 293,000 *l.* in gold and silver. I shall be delighted to convert a quarter of a million of that amount into your "Exchequer bonds" at par, and I can undertake to say for my Glasgow brethren that they will take at least an equal sum on the same terms. Here, then, in Glasgow alone, I undertake to subscribe for half a million of Exchequer bonds at par (100 *l.*), and if you give me the slightest encouragement to believe that such an alteration in our Banking Act will be effected, I think I may venture to assert that the Edinburgh and provincial banks of Scotland will follow our example, and eagerly take up at least an equal amount of these bonds.

Perhaps you may say that as such a modification of the law as enabled us to hold profitable for unprofitable securities was a great boon, we ought to propose better terms. It is true that it would be a great boon, but as a general marketable security I think it would not be wise that the securities given to the Scotch banks should be different from, or bear a less rate of interest than, those issued to the public generally.

One thing is pretty clear, should no expansion of the authorised circulation of the Scotch banks be permitted by a new law, and if the present amount is to be the maximum, the natural wants of the country will require at least one million extra for the present time, and for that sum the Scotch banks must, and would be, perpetual holders of your Exchequer bonds, thus preserving to that extent their value and equilibrium.

I do not say, however, that the Scotch banks may not conceive the boon you would thus bestow worthy of a price, and therefore be content to bargain with you for bonds or other securities bearing a lesser rate than three and a half per cent.

In fact, I cannot conceal from you that whatever rate we get on such legalised securities would be so much gain as compared with our existing condition.

But as we are not asking you to change the law of convertibility, and are willing to continue liable to pay our notes in gold, you will at once see that some margin is necessary, and some consideration due, for the contingencies which may arise, compelling us to realise our securities to procure gold at whatever sacrifices.

I consequently come to the conclusion before hinted at, that although a separate and special bargain, and separate and special bonds similar to that class of "Exchequer bills" used in settlement of our balances of exchange in Edinburgh, might be made and entered into with the Scotch banks, it would be better both for you and them to deal on the same general principle which you put before the public.

I offer my most respectful apology for the freedom with which I try to lay my ideas before you. I feel that I have not thoroughly developed my thoughts and opinions, and if you will be kind enough to signify your permission, I shall take leave again to address you; or, when your important duties afford you a little more leisure, if you will do me the honour to allow me to wait upon you in Downing-street, I think I could, more satisfactorily to myself at least, explain the views I entertain.

I have, &c.
(signed) *John Taylor.*

GLASGOW BANKS.

Glasgow Banks

Sir, Glasgow, 12 December 1855.

The long-continued demand for gold upon the Bank of England, and the consequent stringency in the money market, directs the attention of bankers and others to the subject.

You are no doubt aware that in consequence of an Act passed in the year 1845, intituled, "An Act to regulate the Issue of Bank Notes in Scotland," a certain authorised circulation was assigned to each joint-stock bank, and that any issue in excess of the amount named must be represented by an equal amount of specie. The excess of circulation by all the banks in Scotland is now upwards of one million, and by last Gazette return 1,951,027 *l.* in specie is in the coffers of the banks.

It is not our object at present to discuss the propriety of the enactment referred to, but simply to bring under your consideration a suggestion for relieving the pressure, which we think

think could be effected to a certain extent by adopting such measures as may be considered necessary to allow the banks to hold Government securities in lieu of gold, for the excess of circulation or for a certain portion of it, thereby enabling them to send to the Bank of England from Scotland alone upwards of one million in gold.

The inadequate authorised circulation for the altered state of the country is also worthy of consideration; but we purposely avoid entering at length upon the subject.

Should this communication meet with a favourable consideration a deputation, would be happy to wait on you to give any information and answer any inquiries that might be deemed necessary.

We have, &c.

The Right Honourable
Sir George Cornewall Lewis, Bart.
&c. &c. &c.

CITY OF GLASGOW BANK.

Sir, Glasgow, 19 February 1857.

I HAVE the honour to acknowledge the receipt of your letter of the 9th instant, requesting to have the opinion of this bank with regard to the working of the Act of 1845, regulating the issue of bank notes in Scotland, and whether if any of its provisions seem objectionable, or defective, we will suggest to you those amendments of which we consider it susceptible; and in reply, we may state in regard to the Act that it is unequal in its operations as regards the banks themselves, and that it is felt to be objectionable in regard to the abstraction, and consequent waste, which it occasions for the time being of the capital of the country, in the unnecessary amount of gold which is locked up unproductive in the cellars of the Scotch banks.

Gold hitherto has never been in active circulation in Scotland, nor is it locally required, the people having thorough confidence in the banks, and preferring their notes, convertible at pleasure, to any other exchangeable equivalent; nor is gold wanted for exchange purposes, or transmission to other countries direct from Scotland; simply because the ultimate clearances which have to be discharged in that respect centre in London, and can be effected there only, when required for it in common with the other parts of the empire, from the resources of the Scotch banks lying resting in the hands of the London agents or correspondents for that purpose.

In proof of gold being little required in Scotland prior to the passing of the Act, the casual supply of it coming into the country by travellers, and at the Scotch markets, or fairs, greatly exceeded its wants; and the result therefore was, that from time to time it was transmitted by the different banks, either to London or to some of the English correspondents in Newcastle, Liverpool, or Manchester, according to convenience.

The mode or principle on which the average of the Scotch circulation was collected and struck in 1845, on the monthly returns of the Scotch banks in the year preceding, viz., 1844, and a certificate passed to each of them respectively thereon of the mean amount of notes which each bank was to be at liberty to issue, was not in accordance with the actual state of the circulation in 1844, from the Scotch banks having made their minimum returns only or immediately after having retired their notes at the bi-weekly exchange, instituted for the clearance and settlement of their notes; the maximum amount of their circulation was thus greatly in excess of what was returned, and the average, or certificate, then given was therefore totally inadequate for their wants, or their practice, even in 1845, when the Bill was passed, and much more so subsequently, from the extraordinary progress and expansion in trade, and production generally, with a great increase in the market value of all commodities as compared with the years immediately preceding the year 1844, and that year itself, on the returns of which the Act, 1845, was passed; hence the much larger measure of currency that is now required and must be had to carry over and clear the trading and domestic operations of the country; and, further, several of the issuing banks at the period of the passing of the Act were then but recently in operation, and in an unformed or undeveloped state, as compared with the older banks, and therefore were restricted to an amount of issue far below what the extent of business now requires.

What we would therefore take the liberty to suggest, in emendation of the Act, 1845, would be to give the banks a new average, and extend their authorised circulation, based on the currency of the country as it now stands, and any excess beyond that to be issued in gold or Government securities.

I have, &c.

The Right Hon.
Sir G. Cornewall Lewis, Bart.

(signed) *Rob. Salmond*, Manager.

Appendix, No. 42.

Appendix, No. 42.

THE following STATEMENT is submitted to the Chancellor of the Exchequer by the Governors and Directors of the Bank of Ireland, relating to the several matters brought under his notice by the Deputation at their interview with him in London, on the 28th ult., on the subject of the renewal of the Bank Charter.

First. With reference to the restriction against lending money on mortgage, as created by the 7th section of the Act 21 & 22 Geo. 3, c. 16, under which the Bank of Ireland was established,—It is submitted that the Bank at that time (1782) was the only chartered or public Bank in Ireland, and being established for the purpose of promoting public credit, and assisting the trade and commerce of the country, it was desirable that its capital, then but 600,000 *l.*, should not be locked up in mortgages of land.

The capital of the Bank of Ireland now amounts under successive enactments to no less than 3,000,000 *l.* Irish, exclusive of the rest, or reserved fund, which exceeds 1,000,000 *l.* more.

Since the period referred to, the mode of conducting the mercantile and banking business, as also the landed interest and state of Ireland generally, have undergone important changes, and are now altogether different from what they were in 1782. For instance, amongst other changes, Joint Stock Banks have been established, and there are now several in Ireland which, as well as private banks, are wholly uncontrolled in their power to lend and advance on real security, while the Bank of Ireland is the only bank restricted in this respect. This clause, therefore, originally intended to promote the mercantile interest, is now found to operate injuriously, and thus the merchant and manufacturer, and landed proprietor, who may have abundant real security to offer, are deprived of the accommodation which otherwise the Governors and Directors would gladly afford, and they submit that the discretion which the law allows to all other banks may, with safety and advantage to the public, be extended to them, or that such a relaxation of the Act might be conceded to them as would allow of their advancing a certain amount, in the discretion of Government to fix upon, upon mortgage of real property.

It may be further stated, that in the late years of monetary pressure, 1847–8, this restriction was found extremely injurious, both to the mercantile and to the landed interests, and the Irish Government at that time having made inquiries on the subject, it was found that the clause in question at once prevented the Bank of Ireland from relieving the pressure which then bore so heavily on the country.

The Governors and Directors would, in furtherance of their views on this subject, call the attention of the Chancellor of the Exchequer to the specific case of Drainage Debentures issued by the Board of Works, as illustrating some of the difficulties of which they complain.

These Debentures being secured and charged on land, are held to come within the restriction of the Act alluded to, and the bank are unable to make advances on them, although issued under the authority of the special Act of Parliament, and possessing a security of the highest description.

The next question brought under the notice of the Chancellor of the Exchequer had reference to "the issue and reissue of their notes and bills by Banks of Issue," with reference to which the Bank of Ireland, in common with all the other banks, are subject to very great inconvenience in consequence of the Act 9 Geo. 4, c. 81, by which all banks are prohibited from "issuing or reissuing their promissory notes or bills at any place where they shall have a resident agent, or house of business, unless the same shall be made payable at the places where they shall be issued or reissued, and in every such note the place where the same shall be issued or reissued, shall be expressly mentioned under a penalty of double the amount so issued or reissued." The object of this enactment was to facilitate the holders of notes in obtaining gold, but it entails upon the banks very great expense as well as considerable labour and no small amount of risk, inasmuch as, in order to comply with the Act, they are obliged to return all notes, no matter where paid, to the particular offices at which they have been dated and issued, either in large parcels by special messengers, or cut in half for better security, before they can reissue or put them again into circulation.

The Bank of Ireland, and it is believed all the other Banks of Issue, are in the habit of paying their notes in gold at any of their branches wherever demanded, without any reference whatever to the places where they are issued, so that, in fact, every possible facility is given to the public, and far more than the banks are bound by law to afford. With a view to remedy the inconvenience felt by this enactment, it is submitted that Banks of Issue having paid or retired their notes at any of their branches other than those where they are by law bound to retire them, should have liberty to reissue such notes at whatever office they may have been paid.

Lastly, the Governors and Directors submit for the consideration of the Chancellor of the Exchequer the necessity for some alteration in the law for the protection of the bank against fraud in dealing with corporations who act under seal. By the recent decision in the House of Lords, in the case of "The Trustees of Evans's Charities against the Bank of Ireland," it was held that the bank was bound to replace the sum of 9,300 *l.* Government stock belonging to the trustees, together with a large amount of dividend. The trustees had entrusted the care of their seal to their agent or secretary, who, without any authority from them, affixed it to a power of attorney for a transfer of the stock in presence of two witnesses, by which means

means he transferred and got possession of the fund, but inasmuch as the trustees had not authorised him to use the seal for this purpose, it was held to be a forgery and the bank was considered liable. In such a case it is submitted that the bank should be exonerated, and that the corporation shall bear the loss that shall be occasioned by their negligence and want of proper care in the custody of their seal. Appendix, No. 42.

The Governors and Directors submit that the renewal of the Bank Charter being now under consideration, an opportunity is afforded for an alteration or amendment of the law in regard to the several matters herein referred, and they will be prepared to supply such further information on the subject as the Chancellor of the Exchequer may require.

Appendix, No. 43.

Appendix, No. 43.

THE following STATEMENT is submitted to the Chancellor of the Exchequer by the undermentioned unincorporated Banks or Banking Companies in Scotland, viz.:— The Union Bank of Scotland; the Western Bank of Scotland; the Clydesdale Banking Company; the Edinburgh and Glasgow Bank; the City of Glasgow Bank; in order that the same may be laid before the Committee now sitting on the subject of the Bank Acts of 1844 and 1846.

THEY beg to represent the very serious disadvantages which, from not being incorporated, they are, by the Act of 1844, extended to Scotland in 1846, made to lie under in comparison with other Scotch Banks which had obtained charters of incorporation before the passing of these Acts; and from not being allowed to obtain incorporation, except by subjecting themselves to disabilities from which those other banks are exempt.

Previous to the passing of the Acts referred to, there were five Scottish banks incorporated. At that period, the amount of moneys required by public or private Acts of Parliament to be deposited in bank was comparatively insignificant; but it has recently been much increased under the operation of Drainage and Railway Acts, and especially of the Pupils' Protection Act, which has a very extensive application, and all of which Acts require that moneys having to be placed in bank shall be so placed in one that is incorporated. Thus an invidious distinction is created between the incorporated and unincorporated banks, although the one are not entitled to assume superiority over the other, whether as respects capital, credit, or respectability. Indeed, the injustice of the distinction has been tacitly acknowledged by Government, inasmuch as the Lord Advocate, in all recent Bills affecting Scotland, has permitted trust and other moneys to be deposited in any Joint Stock Bank of Issue, whether incorporated or unincorporated. At present, too, the unincorporated banks cannot take or hold securities as a firm or copartnery, but only in the name of trustees for their behoof; and as those trustees are constantly changing, much inconvenience as well as risk and expense are incurred in keeping the securities available.

The unincorporated banks would naturally seek to remedy these evils by applying for charters of incorporation; but in doing so, they are met by regulations which do not affect the banks that were incorporated before the passing of the above-mentioned Acts, and which, if submitted to by the former, would place them at a disadvantage as compared with their more fortunate neighbours.

The sixth clause of section 4, Act 7 & 8 Vict. c. 113, provides for the publication of the assets and liabilities of the company once a month. Could such publication be regarded as affording any true index to the state of a bank's affairs, there might be little objection to the requirement, provided the rule were made applicable to all banks alike; but the five chartered banks being exempt from it, publication by the others on obtaining charters would tend to lower them in status relatively to the former, and might possibly lead to more serious consequences. Such publication, however, affords no protection either to the public or shareholders, as is amply illustrated in the case of the Royal British Bank.

That there are no circumstances in their relative position warranting such distinction will be sufficiently evident on adverting to the present state of the banking establishments in Scotland, as exhibited in the Appendix to this statement, from which it appears, (1.) That the five chartered banks possess collectively a paid-up capital of 5,600,000 *l.*, while that of the five unchartered banks is 5,307,000 *l.* (2.) That the chartered banks have, or had lately, an aggregate of 4,343 partners or shareholders, while the unchartered numbered at the same period 6,472 partners. (3.) That the chartered banks have 228 branches in various parts of Scotland, and the unchartered have 304. (4.) That the chartered banks have an authorised circulation of 1,593,413 *l.*, and the unchartered have an authorised circulation of 1,067,234 *l.*, while their actual circulation bears a much higher proportion, the latest returns (those of 11 April 1857) being,

Chartered Banks - - - - - - -	£. 1,765,784
Unchartered Banks - - - - - - -	1,530,080

This statement does not represent the other seven Unincorporated Scotch Banks, partly because the capital of these companies, as well as their operations, are on a less extensive scale, and because, lying more remote from the centres of business, they feel less sensibly the hardship complained of. In so far, however, as they are exposed to competition with the chartered banks, their grievance is the same.

Appendix No. 43.

It may also be noticed, that the five unchartered banks submitting this statement are principally Glasgow banks, while all the chartered banks have their head offices in Edinburgh; and it cannot but be deemed a hardship that the banking establishments of a city which now ranks second only to London in commercial importance should be denied equal privileges with those of Edinburgh, or at least that they should (in favour of the latter) be deprived by statute of rights which they originally possessed; for such is the result when deposits are compulsorily taken from them to be placed in any of the chartered banks or their branches. This consequence of the enactments complained of they now experience almost daily, and to a rapidly increasing extent; large sums, as well as important operative accounts, being continually withdrawn from them to be taken to a chartered bank, and often under circumstances most harassing and inconvenient to the parties who are compelled so to act.

In conclusion, it is humbly submitted that the present time affords a favourable opportunity for abolishing the objectionable enactments, and for introducing a measure which, while giving the public perfect safety, would place the banks in Scotland all upon the same level, and so cease to create distinctions which are unjustified by the positions of the respective establishments.

Appendix, No. 44.

MEMORIAL of the Bankers of *Cumberland, Westmoreland,* and *Lancashire,* praying to be put on the same footing as Scotch and Irish Banks with regard to the Issue of Notes. Appendix, No. 44.

To the Right Honourable Sir *George Cornewall Lewis,* Bart., Chancellor of Her Majesty's Exchequer.

Right Honourable Sir,

We, the undersigned bankers, issuing our own notes under the provisions of the Act of Parliament 7 & 8 Vict. c. 32, in the counties of Cumberland, Westmorland, and Lancaster, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call your attention to certain provisions contained therein, which in practice work with greater stringency than we believe it was intended they should by the original framers of the Act.

We beg to call your attention to clauses 13, 17, 18, and 19, which provide that the average of our circulations, taken for each succeeding period of four weeks, shall not exceed certain fixed limits. We beg respectfully to represent that in consequence of the shortness of the time permitted us by these clauses for taking the average, we are unable to avail ourselves of our circulations to the full extent granted us by law, by amounts varying from 5 to 10 per cent. of our circulation, according to circumstances. At certain seasons of the year there are temporary demands for increased local circulation arising from fairs and other causes; we cannot at these times extend our circulations for fear of being unable to contract them, so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England notes, to the no small annoyance of our customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England notes not being freely taken in remote country districts. When the temporary demand ceases, a further effect of this unnatural restriction is felt by us; our circulations contract, and we are unable to restore them to their natural limit until another period of activity commences.

We beg respectfully to represent, that if the time permitted us for taking the averages of our circulations were extended from one month to six months, and the year divided into two periods of six months each, we should then be able to avail ourselves of our circulations to very nearly the full extent permitted us by law, and to facilitate the transaction of business to our customers, and the public generally.

We believe that bankers throughout the country would look upon this change with great satisfaction, and, as it would not in any way infringe upon the principle of the Act of Parliament above referred to, we beg respectfully to suggest that this change should be embodied in the Bill to be brought before the House of Commons during the present Session.

We would further respectfully represent that by the Scotch and Irish Banking Acts of 1845, 8 & 9 Vict. c. 37 & 38, which are complements to the English Act of 1844, the Scotch and Irish banks are allowed to issue beyond their fixed limits a sum equal to the amount of gold and silver held by them respectively, in accordance with the principle which regulates the Issue Department of the Bank of England.

We would, therefore, further respectfully suggest that we should be put upon the same footing as the Scotch and Irish banks in this respect, and thus be enabled to meet with greater regularity and certainty the legitimate business wants of our respective districts than we are able to do at present, and to obviate the difficulties and inconveniences under which we at present labour. As this would be in entire accordance with the principles of the legislative measures of 1844 and 1845, we trust that Parliament will see no difficulty in granting the concession.

Signed this 1st day of May, in the year of our Lord 1857.

To the Right Honourable Sir *George Cornewall Lewis*, Bart., Chancellor of Her Majesty's Exchequer.

WE, the undersigned bankers, issuing our own notes under the provisions of the Act of Parliament 7 & 8 Vict. c. 32, in the county of York, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call your attention to certain provisions contained therein, which in practice work with greater stringency than we believe it was intended they should by the original framers of the Act.

We beg to call your attention to clauses 13, 17, 18 and 19, which provide that the averages of our circulations, taken for each succeeding period of four weeks, shall not exceed certain fixed limits.

We beg respectfully to represent, that in consequence of the shortness of the time permitted us by these clauses for taking the averages, we are unable to avail ourselves of our circulations to the full extent granted us by law, by amounts varying from 5 to 10 per cent. of our circulations, according to circumstances.

At certain seasons of the year there are temporary demands for increased local circulation, arising from fairs, and other causes. We cannot at these times extend our circulations, for fear of being unable to contract them, so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England notes, to the no small annoyance of our customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England notes not being freely taken in remote country districts.

When this temporary demand ceases, a further effect of this unnatural restriction is felt by us. Our circulations contract, and we are unable to restore them to their natural limit until another period of activity commences.

We beg respectfully to represent, that if the time permitted us for taking the averages of our circulations were extended from one month to six months, and the year divided into two periods of six months each, we should then be able to avail ourselves of our circulations to very nearly the full extent permitted us by law, and to facilitate the transaction of business to our customers and the public generally. We believe that bankers throughout the country would look upon this change with great satisfaction; and as it would not in any way infringe upon the principle of the Act of Parliament above referred to, we beg respectfully to suggest that this change should be embodied in the Bill to be brought before the House of Commons during the present Session.

We would further respectfully represent, that by the Scotch and Irish Banking Acts of 1845, 8 & 9 Vict. c. 37 and 38, which are complements to the English Act of 1844, the Scotch and Irish banks are allowed to issue beyond their fixed limits a sum equal to the amount of gold and silver held by them respectively, in accordance with the principle which regulates the Issue Department of the Bank of England.

Per *John Kaye*, Chairman.

MEMORIAL of SHEFFIELD BANKING COMPANIES praying to be put on the same footing as Scotch and Irish Banks, with regard to the ISSUE of NOTES.

To the Right Honourable Sir *George Cornewall Lewis*, Baronet, Chancellor of Her Majesty's Exchequer.

WE, the undersigned bankers, issuing our own notes under the provisions of the Act of Parliament 7 & 8 Vict. c. 32, in the counties of York and Derby, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call your attention to certain provisions contained therein, which in practice work with greater stringency than we believe it was intended they should by the original framers of the Act.

We

We beg to call your attention to clauses 13, 17, 18, and 19, which provide that the averages of our circulations taken for each succeeding period of four weeks, shall not exceed certain fixed limits.

We beg respectfully to represent, that, in consequence of the shortness of the time permitted to issuing bankers by these clauses for taking the averages, they are unable to avail themselves of their circulations to the full extent granted by law.

At certain seasons of the year there are temporary demands for increased local circulation arising from fairs, from the accumulation of notes in the hands of tenants for some time previous to their rent days, and other causes. Bankers cannot at these times extend their circulations, for fear of being unable to contract their issues, so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England notes, to the no small annoyance of their customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England notes not being freely taken in country districts from a greater apprehension of forgery than exists with the well known local issues.

When this temporary demand ceases, a further effect of this unnatural restriction is felt by the issuing bankers. Their circulations contract, and they are unable to restore them to their natural limit until another period of activity commences.

We beg respectfully to represent, that if the time permitted to bankers for taking the averages of their circulations were extended from one month to six months, and the year divided into two periods of six months each, they would then be able to avail themselves of their circulations to very nearly the full extent permitted them by law, and to facilitate the transaction of business to their customers and the public generally. We believe that bankers throughout the country would look upon this change with great satisfaction, and as it would not in any way infringe upon the principle of the Act of Parliament above referred to, we beg respectfully to suggest that this change should be embodied in the Bill to be brought before the House of Commons during the present Session.

We would further respectfully represent, that by the Scotch and Irish Banking Act of 1844, the Scotch and Irish banks are allowed to issue beyond their fixed limits, a sum equal to the amount of gold and silver held by them respectively, in accordance with the principle which regulates the issue department of the Bank of England.

We therefore respectfully suggest that we should be put upon the same footing as the Scotch and Irish banks in this respect, and thus be enabled to meet with greater regularity and certainty the legitimate business wants of our respective districts, than we are able to do at present, and to obviate the difficulties and inconveniences under which we at present labour. As this would be in entire accordance with the principles of the legislative measures of 1844 and 1845, we trust that Parliament will see no difficulty in granting the concession.

MEMORIAL of the GLOUCESTERSHIRE BANKING COMPANY.

To the Right Honourable Sir *George Cornewall Lewis*, Bart., Chancellor of Her Majesty's Exchequer.

The MEMORIAL of the Gloucestershire Banking Company, carrying on the business of Bankers at Gloucester, Cheltenham, Tewkesbury, Stroud, Newnham, Cirencester, Stow-on-the-Wold, Moreton-in-the-Marsh, and Evesham, and issuing their own Notes under the provisions of the Act of 7 & 8 Vict. c. 32.

Showeth,

THAT their circulation of notes is limited by the said Act to 155,920 *l.*

That experience has proved that this amount is insufficient to the wants of the district.

That frequently, and especially at the customary periods of payment of rents and taxes, and of fairs and large markets, your memorialists are obliged to use gold and silver for large amounts, over and above the limited issue of their own notes, always at great inconvenience and loss to themselves, and generally objected to by their customers.

That this loss and inconvenience are greatly increased by the practice of taking the average circulation monthly; this practice obliging them to keep an unnecessary amount as a margin to provide against the possibility of exceeding their limit, and preventing them from availing themselves at any time of the full and specified limit.

The convenience of the public is affected by the necessity of contracting the circulation of the district at periods when it most requires expansion, and they cannot, without delay and loss, restore the equilibrium.

Appendix, No. 44.

Already the provincial circulation has been reduced by the operation of the Act, under the provisions in respect of banks of issue becoming extinct, to the extent of 821,978 *l.*, and any unnecessary contraction of circulation by the banks of issue now remaining, is therefore felt by the public in an increased degree.

Your memorialists therefore respectfully submit that it would be no infringement of the principle of the Act, yet of great benefit to them and their customers, to take the averages half-yearly instead of monthly, and they pray that they may be permitted to do so.

They also submit that, in accordance with the principle regulating the issue department of the Bank of England, and with the permission already granted to the Scotch and Irish Banks, they should be allowed to issue notes beyond their specified limit for a sum equal to the gold and silver held by them.

Signed, on behalf of the Gloucestershire Banking Company,

Samuel Baker, Chairman.

Gloucester, 5 June 1857.

MEMORIAL of Bankers in the County of *Derby*.

To the Right Honourable Sir *George Cornewall Lewis*, Bart., Chancellor of Her Majesty's Exchequer.

We, the undersigned bankers, issuing our own notes under the provisions of the Act of Parliament 7 & 8 Vict., c. 32, in the county of Derby, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call your attention to certain provisions contained therein, which in practice work with greater stringency than we believe it was intended they should by the original framers of the Act.

We beg to call your attention to clauses 13, 17, 18, and 19, which provide that the averages of our circulations, taken for each succeeding period of four weeks, shall not exceed certain fixed limits.

We beg respectfully to represent that, in consequence of the shortness of the time permitted us by these clauses for taking the averages, we are unable to avail ourselves of our circulations to the full extent granted us by law, by amounts varying from 5 to 10 per cent. of our circulations, according to circumstances.

At certain seasons of the year there are temporary demands for increased local circulation, arising from fairs and other causes. We cannot at these times extend our circulations, for fear of being unable to contract them so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England notes, to the no small annoyance of our customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England notes not being freely taken in remote country districts.

When this temporary demand ceases, a further effect of this unnatural restriction is felt by us: our circulations contract, and we are unable to restore them to their natural limit until another period of activity commences.

We beg respectfully to represent, that if the time permitted us for taking the averages of our circulations were extended from one month to six months, and the year divided into two periods of six months each, we should then be able to avail ourselves of our circulations to very nearly the full extent permitted us by law, and to facilitate the transaction of business to our customers and the public generally. We believe that bankers throughout the country would look upon this change with great satisfaction; and as it would not in any way infringe upon the principle of the Act of Parliament above referred to, we beg respectfully to suggest that this change should be embodied in the Bill to be brought before the House of Commons during the present Session.

MEMORIAL

MEMORIAL of Bankers in the Counties of *Bedford, Hertford, Buckingham,* and *Essex.*

To the Right Honourable Sir *George Cornewall Lewis,* Bart., Chancellor of Her Majesty's Exchequer.

We, the undersigned bankers, issuing our own notes under the provisions of the Act of Parliament 7 & 8 Vict. c. 32, in the counties of Bedfordshire, Hertfordshire, Buckinghamshire, and Essex, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call your attention to certain provisions contained therein, which in practice work with greater stringency than we believe it was intended they should by the original framers of the Act.

We beg to call your attention to clauses 13, 17, 18, and 19, which provide that the averages of our circulations, taken for each succeeding period of four weeks, shall not exceed certain fixed limits.

We beg respectfully to represent, that, in consequence of the shortness of the time permitted us by these clauses for taking the averages, we are unable to avail ourselves of our circulations to the full extent granted us by law, by amounts varying from 5 to 10 per cent. of our circulations, according to circumstances.

At certain seasons of the year there are temporary demands for increased local circulation, arising from fairs and other causes. We cannot at these times extend our circulations, for fear of being unable to contract them, so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England notes, to the no small annoyance of our customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England notes not being freely taken in country districts. When this temporary demand ceases, a further effect of this unnatural restriction is felt by us: our circulations contract, and we are unable to restore them to their natural limit until another period of activity commences.

We beg respectfully to represent, that if the time permitted us for taking the averages of our circulations were extended from one month to six months, and the year divided into two periods of six months each, we should then be able to avail ourselves of our circulations to very nearly the full extent permitted us by law, and to facilitate the transaction of business to our customers and the public generally. We believe that bankers throughout the country would look upon this change with great satisfaction; and as it would not in any way infringe upon the principle of the Act of Parliament above referred to, we beg respectfully to suggest that this change should be embodied in the Bill to be brought before the House of Commons during the present Session.

We would further respectfully represent that, by the Scotch and Irish Banking Acts of 1845, 8 & 9 Vict. c. 37 and 38, which are complements to the English Act of 1844, the Scotch and Irish banks are allowed to issue, beyond their fixed limits, a sum equal to the amount of gold and silver held by them respectively, in accordance with the principle which regulates the issue department of the Bank of England.

We therefore respectfully suggest that we should be put upon the same footing as the Scotch and Irish banks in this respect, and thus be enabled to meet with greater regularity and certainty the legitimate business wants of our respective districts than we are able to do at present, and to obviate the difficulties and inconveniences under which we at present labour. As this would be in entire accordance with the principles of the legislative measures of 1844 and 1845, we trust that Parliament will see no difficulty in granting the concession.

PETITION of the Chamber of Commerce, *Edinburgh.*

The humble Petition of the Chamber of Commerce and Manufactures of the City of *Edinburgh,* incorporated by Royal Charter,

Showeth,

That by an Act passed in the year 1844 to regulate the issue of Bank Notes, it was enacted that securities to the value of fourteen million pounds should be set apart by the issue department of the Bank of England, and that thereafter there should be delivered to the banking department an amount of Bank of England Notes equal to the aggregate amount of the securities, coin, and bullion possessed by the issue department.

Appendix, No. 44.

That since the passing of the aforesaid Act, the population of the country and its domestic and foreign trade have very largely increased, and that the amount of Bank Notes sufficient for the requirements of the increased population and commerce is likewise necessarily greater.

That in Scotland, in which any increase in the issue of notes since 1845 is only permitted under regulations which take from the banks of issue every temptation to over-issue, the actual circulation has gone on increasing as the population and trade of the country have increased, until it is now one-third greater than it was in 1845, when the Act regulating the issues of the Scotch banks was passed by the Legislature.

That the census returns show that the population of England has been increasing faster than that of Scotland, and that there is every reason to believe that its progress in trade has been proportionally as great.

That on several occasions lately the reserve of notes in the banking department of the Bank of England has been reduced so low as to induce merchants to apply for banking assistance which they did not at the time require, lest they might be unable to obtain it at a subsequent period; thus materially aggravating mercantile pressure, and producing rapid fluctuations in the value of money.

That your petitioners would therefore respectfully recommend that the Bank of England should be authorised to issue upon securities additional notes to the value of four million pounds, or such other sum as may appear necessary for the requirements of the country.

May it therefore please your Honourable House to take the premises into consideration, and to authorise such an increase to the note-issue of the Bank of England as in your wisdom shall seem meet.

And your Petitioners shall ever pray.

Signed, in name and by appointment of the Chamber, and seal affixed, this 26th day of February 1857.

Geo. E. Russell, Chairman.

PETITION of Bankers in the South of *England.*

The humble Petition of the undersigned Bankers, resident and carrying on Business in the South of *England.*

That your petitioners are bankers carrying on their business in different parts of the south of England.

That your petitioners have relinquished issuing their own notes, and adopted the circulation of the Bank of England, receiving the compensation allowed by the Bank Charter Act, 1844.

That the arrangement entered into by your petitioners for issuing Bank of England Notes instead of their own, having been, in furtherance of the views and intentions entertained by Parliament at the period of the passing of the Bank Charter Act, 1844, was understood by your petitioners as intended to be continued so long as the issuing bankers retained the privilege of circulating their own notes.

That the compensation of 1 *l.* per centum per annum, on the average amount of the circulation of your petitioners, and bankers similarly circumstanced, was not and is not more than a reasonable and proper allowance for the surrender of the privilege of issuing their own notes; and, unless such compensation be continued while bankers are permitted to use their own notes, your petitioners will be injured by having assisted in furthering the principle upon which the Bank Charter Act of 1844 was based, and the views of the Government of that period.

Your petitioners, therefore, humbly pray, that, in the event of bankers being allowed to continue to issue their own notes, the present compensation to bankers adopting the issue of the Bank of England in lieu of their own notes may also be continued; and that, in any Act to be passed affecting the privileges of the Bank of England as to the issue of notes, or the objects contemplated by the Bank Charter Act, 1844, such compensation may be provided for.

And your Petitioners will ever pray, &c.

Grant, Gillman & Long.
Erasmus Jackson, for South Hants Bank.
Gunner & Co.
&c. &c. &c.

PETITION of the Chamber of Commerce, *Leeds.*

To the Honourable the Commons of the United Kingdom of *Great Britain* and *Ireland,* in Parliament assembled.

The humble Petition of the *Leeds* Chamber of Commerce,

Showeth,

That your petitioners, being members of a commercial body, are greatly interested in whatever may tend to promote the well-being of trade, and are especially anxious that the basis thereof, the monetary system, should be placed and maintained in a firm and honourable position.

That your petitioners view with great satisfaction, that a Select Committee has been appointed by your Honourable House, to sit for the purpose of inquiring into the operation of the Banking Act of 1844 for England, and also into the operation of the Banking Acts for Ireland and Scotland, passed in 1845.

That your petitioners, regarding the question of the currency as a question of vital importance to the interests of the nation, and recognising the imperative necessity that all laws which are intended to regulate the value of the metallic currency and the circulation of Bank Notes, should be framed on wise and equitable principles, so that all classes of the population of this kingdom may alike experience in their dealings with one another, the salutary effects thereof, no opportunity being afforded in the operation of such laws for any persons to secure unjust gain, to the injury of their fellow-subjects, humbly urge your Honourable House to adopt such measures as may cause the inquiry about to be made, to be of the most searching and impartial character.

Your petitioners therefore humbly pray, that only such Members of your Honourable House may be appointed to sit on the Committee for inquiring into the operation of the Banking Act of 1844 for England, and also into the operation of the Banking Acts for Ireland and Scotland, passed in 1845, that are known to be strictly independent in their views, and unbiassed by particular interests as regards the currency, so that a full, fair, and impartial investigation of the operation of the above Acts may be ensured.

And your petitioners will ever pray.

Signed on behalf of the Council of the Leeds Chamber of Commerce,

Darnton Lupton,
Vice-President.

PETITION of Bankers and Managers of Joint Stock Banks in the County of *Kent.*

The humble Petition of the undersigned Bankers and Managers of Joint Stock Banks carrying on business in the county of *Kent,* and issuers of their own Notes,

Showeth,

That, under the Act passed in the seventh and eighth years of the reign of her present Majesty, c. 32, the note circulation of every firm of country bankers was restricted to the average circulation of twelve weeks preceding the 27th day of April 1844.

That each firm issuing its own notes is bound by the said Act to make a weekly return of its circulation; and further, that on the fourth week the average of the four preceding weeks is taken, and should that exceed the fixed limit, the amount of such excess is liable to be forfeited to the Commissioners of Inland Revenue by way of penalty.

That your petitioners, in common with all country bankers who are issuers of their own notes, are placed at certain seasons of the year in positions of great difficulty in their endeavour to keep under their respective circulation, arising from increased periodical demands for agricultural labour, more especially during the time of hop-picking, also the retention of notes by the growers for the payment of their duty, and various other material causes.

That at such periods they are compelled to cease issuing their own notes altogether, and to substitute gold or Bank of England Notes; and that, notwithstanding such cessation, instances have occurred when they have been in excess, in spite of the greatest vigilance and desire to keep within their average; that at such times their attention is most fully occupied in providing for the extraordinary wants of the neighbourhood, and the task of endeavouring to keep down the circulation is rendered most harassing.

That your petitioners humbly venture to suggest that an extension of the number of weeks, from four to eight weeks, in striking the average of their circulation, would be a great boon and assistance to country bankers issuing their own notes, inasmuch as it would effectually remedy the present grievance without controverting the spirit of the Act.

Appendix, No. 44.

Your petitioners therefore most humbly pray, that your Honourable House will consent to the extension of the period for calculating the average circulation, and that a clause to that effect may be inserted in the Act for the renewal of the Bank Charter, or give such other relief as to your Honourable House may seem more fit.

And your petitioners, as in duty bound, will ever pray.

Hammond & Co.
Hilton, Rigden, & Co.
Vallance & Co.
&c. &c. &c.

PETITION of Bankers in the Counties of *Cumberland*, *Westmorland*, and *Lancaster*.

THE Petition of the undersigned Bankers, issuing their own Notes under the provisions of the Act 7 & 8 Vict. c. 32, in the counties of *Cumberland*, *Westmorland*, and *Lancaster*,

Showeth,

THAT your petitioners, without venturing to offer any opinion as to the general principles of the Act above referred to, beg to call the attention of your Honourable House to certain provisions contained in such Act, which in practice work with greater stringency than your petitioners believe it was intended they should by the original framers of the Act.

That your petitioners beg to call the attention of your Honourable House to clauses 13, 17, 18, and 19, which provide that the averages of their circulation, taken for each succeeding period of four weeks, should not exceed certain fixed limits.

That your petitioners beg respectfully to represent that, in consequence of the shortness of the time permitted to them by these clauses for taking the averages, they are unable to avail themselves of their circulations to the full extent granted them by law, by amounts varying from 5 to 10 per cent. of their circulations, according to circumstances.

That at certain seasons of the year there are temporary demands for increased local circulation, arising from fairs and other causes.

That your petitioners at these times cannot extend the circulation of their notes for fear of being unable to contract them so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England Notes, to the annoyance of their customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England Notes not being freely taken in remote country districts.

That when this temporary demand has ceased, a further effect of this unnatural restriction is felt by your petitioners in the contraction of their circulation, which they are unable to restore to its natural limit until another period of activity commences.

That your petitioners beg respectfully to represent that if the time permitted them for taking the average of their circulation were extended from one month to six months, and the year divided into two periods of six months each, they would thereby be able to avail themselves of their circulation to nearly the full extent allowed them by law, and to facilitate the transaction of business to their customers and the public generally without infringing the principle of the Act of Parliament above referred to.

That your petitioners beg further respectfully to represent that by the Scotch and Irish Banking Acts of 1845 (8 & 9 Vict. c. 37 and 38), which are the complements to the English Act of 1844, the Scotch and Irish banks are allowed to issue beyond their fixed limits a sum equal to the amount of gold and silver held by them respectively, in accordance with the principle which regulates the issue department of the Bank of England.

Your petitioners therefore humbly pray your Honourable House that in any Bill to be introduced for the regulation of the currency, you will be pleased to introduce clauses for extending the time for taking the average of the circulation of country bankers from four weeks to six months, and for enabling them to issue beyond their fixed limits notes for sums of money equal in the aggregate amount to the gold and silver held by them respectively.

And your petitioners will ever pray, &c.

Appendix, No. 44.

PETITION of the Chamber of Commerce, *Birmingham.*

THE humble Petition of the Chamber of Commerce for *Birmingham* and the Midland District,

Showeth,

THAT the laws now in force respecting the business of banking and the issue of Bank Notes (especially the Bank Charter Act of 1844) have not in practice been followed by the results contemplated by their enactment, viz. a diminution of the fluctuations in the amount of circulation, in the value of money, and in the general range of prices (greater and more frequent fluctuations in the two former having taken place during the last 13 years than during any similar period in the present century).

That since the amount of Bank Note issue was regulated by the said Act, the population of this realm has greatly increased, the basis of its commercial operations has been greatly extended, and the late unforeseen discoveries of gold in California and Australia have tended in various ways to disturb the monetary relations of the country.

That, notwithstanding the enormous amount of gold imported since those discoveries, its re-export has been so extensive and immediate that the amount of bullion in the issue department of the Bank of England (the foundation on which the issue of Bank Notes is based by the said Act) has been diminished below the amount at which it stood at the time of passing the said Act; and thus, notwithstanding the aforesaid large increase in population and trade, the amount of Bank of England Notes in circulation is now considerably less than was the case in 1844, while the issues of private and joint-stock banks have also largely diminished since that period.

That the principle on which the privilege of issuing notes is by the Bank Charter Act of 1844 granted to certain banks, and withheld from others, and also the provisions of the Act for regulating joint-stock banks, 1844, appear to your petitioners to require revision.

That for these reasons your petitioners have learned with much satisfaction that your Honourable House has appointed a Committee to inquire into the operation of the said Acts, and of the Bank Acts for Ireland and Scotland; and, being deeply impressed with the importance of such inquiry, they earnestly pray that it may be made as full, searching, and impartial as possible, and especially that competent witnesses from various parts of the kingdom may be examined who can lay before the Committee their experience of the practical results of the said Acts.

And your petitioners will ever pray.

Signed on behalf and by direction of the Council,

J. D. Goodman, Vice-President,

PETITION of the *Liverpool* Financial Reform Association.

The Petition of the undersigned Members of the Financial Reform Association, and other Inhabitants of *Liverpool*,

Humbly showeth,

THAT your petitioners, being deeply interested in the prosperity of the trade, commerce, and manufactures of this country, regret to find that the Committee of your Honourable House appointed to inquire into the subject of renewing the Bank of England Charter, is mainly composed of men pledged to the existing system, and directly interested in its continuance.

That the secresy of its proceedings must tend to impair public confidence in that Committee, as tending to show the existence of a foregone conclusion on the part of Her Majesty's Government in favour of the renewal of the charter.

That, without entering into any discussion of currency theories, or suggesting any particular remedies for grievances which all mercantile men must feel, your petitioners think it highly essential to the public welfare, as well as to the character of Parliament and Government, that the inquiry into this important subject should be conducted by impartial and able men, unpledged to any particular system, and also that it should be an open one, so that its proceedings may be reported whilst in progress, and opportunities offered for the correction of erroneous evidence and mis-statements, if any such be made.

Your petitioners therefore humbly pray that your Honourable House will be pleased to adopt such measures as may be necessary to render the inquiry into the Bank Act of 1844, and the Bank of England Charter, thoroughly searching, honest, and impartial; and also that your Honourable House will give additional efficiency and credit to the deliberations of such Committee, by removing from it the seal of secresy.

And your petitioners will ever pray.

John Jones.
Robertson Gladstone.
Lawrence Heyworth.
&c. &c. &c.

Appendix, No. 44.

PETITION of Bankers in the County of *Gloucester*.

We, the undersigned bankers issuing our own notes, under the provisions of the Act of Parliament 7 & 8 Vict., c. 32., in the County of Gloucester, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call your attention to certain provisions contained therein, which in practice work with greater stringency than we believe was intended they should by the original framers of the Act.

We beg to call your attention to clauses 13, 17, 18, and 19, which provide that the averages of our circulations, taken for each succeeding period of four weeks, shall not exceed certain fixed limits.

We beg respectfully to represent, that in consequence of the shortness of the time permitted us by these clauses for taking these averages, we are unable to avail ourselves of our circulations to the full extent granted us by law, by amounts varying from 5 to 10 per cent. of our circulations, according to circumstances.

At certain seasons of the year there are temporary demands for increased local circulation, arising from fairs and other causes. We cannot at these times extend our circulations, for fear of being unable to contract them so as to reduce the average within the limit, in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England Notes, to the no small annoyance of our customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England Notes not being freely taken in remote country districts. When this temporary demand ceases, a further effect of this unnecessary restriction is felt by us; our circulations contract, and we are unable to restore them to their natural limit, until another period of activity commences. We beg respectfully to represent, that if the time permitted us for taking the averages of our circulations were extended from one month to six months, and the year divided into two periods of six months each, we should then be able to avail ourselves of our circulations to very nearly the extent permitted us by law, and to facilitate the transaction of business to our customers and the public generally. We believe that bankers throughout the country would look upon this change with great satisfaction; and as it would not in any way infringe upon the principle of the Act of Parliament above referred to, we beg respectfully to suggest, that this change should be embodied in the Bill to be brought before the House of Commons during the present Session. We would further respectfully represent, that by the Scotch and Irish Banking Acts of 1845, 8 & 9 Vict., c. 37 and 38, which are complements to the English Acts of 1844, the Scotch and Irish banks are allowed to issue, beyond their fixed limits, a sum equal to the amount of gold and silver held by them respectively, in accordance with the principles which regulate the issue department of the Bank of England.

We therefore respectfully suggest, that we should be put upon the same footing as the Scotch and Irish banks in this respect, and thus be enabled to meet with greater regularity and certainty the legitimate business wants of our respective districts than we are able to do at present, and to obviate the difficulties and inconveniences under which we at present labour. As this would be in entire accordance with the principles of the legislative measures of 1844 and 1845, we trust that Parliament will see no difficulty in granting the concession.

Harwood, Hatcher, & Sams,
Thornbury Bank, Gloucestershire.

22 May 1857.

PETITION of Bankers in the County of *Monmouth*.

To the Honourable the Commons of *Great Britain* and *Ireland* in Parliament assembled.

We, the undersigned bankers, issuing our own notes under the provisions of the Act of Parliament 7 & 8 Vict. c. 32, in the county of Monmouth, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call your attention to certain provisions contained therein, which in practice work with greater stringency than we believe it was intended they should by the original framers of the Act. We beg to call your attention to clauses 13, 17, 18, and 19, which provide that the averages of our circulation, taken for each succeeding period of four weeks, shall not exceed certain fixed limits. We beg respectfully to represent that, in consequence of the shortness of the time permitted us by these clauses for taking the averages, we are unable to avail ourselves of our circulations to the full extent granted us by law, by amounts varying from 5 to 10 per cent. of our circulations, according to circumstances. At certain seasons of the year there are temporary demands for increased local circulation, arising from fairs and other causes. We cannot at these times extend our circulations for fear of being unable to contract them so as to reduce the average within the limit in the short time allowed for that purpose, and are, therefore, compelled to substitute gold or Bank of England Notes, to the no small annoyance of our customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England Notes not being freely taken in remote country districts.

When

When this temporary demand ceases, a further effect of this unnatural restriction is felt by us; our circulations contract, and we are unable to restore them to their natural limit, until another period of activity commences. We beg respectfully to represent that, if the period permitted us were extended from one month to six months, and the year divided into two periods of six months each, we should then be able to avail ourselves of our circulations to very nearly the full extent permitted us by law, and to facilitate the transaction of business to our customers and the public generally. We believe that bankers throughout the country would look upon this change with great satisfaction; and, as it would not in any way infringe upon the principle of the Act of Parliament above referred to, we beg respectfully to suggest that this change should be embodied in the Bill to be brought before the House of Commons during the present Session.

We would further respectfully represent that by the Scotch and Irish Banking Acts of 1845, 8 & 9 Vict. c. 37, 38, which are complements to the English Act of 1844, the Scotch and Irish banks are allowed to issue beyond their fixed limits a sum equal to the amount of gold and silver held by them respectively, in accordance with the principle which regulates the issue department of the Bank of England. We therefore respectfully suggest that we should be put upon the same footing as the Scotch and Irish banks in this respect, and thus be enabled to meet with greater regularity and certainty the legitimate business wants of our respective districts than we are able to do at present, and to obviate the difficulties and inconveniences under which we at present labour. As this would be in entire accordance with the principle of the legislative measures of 1844 and 1845, we trust that Parliament will see no difficulty in granting the concession.

Bromage, Snead, & Snead, Bankers,
Chepstow, Monmouthshire.

PETITION of Bankers in the Counties of *York* and *Derby.*

To the Honourable the Commons of the United Kingdom of *Great Britain* and *Ireland,* in Parliament assembled.

We, the undersigned bankers, issuing our own notes under the provisions of the Act of Parliament, 7 & 8 Vict. c. 32, in the counties of York and Derby, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call the attention of your Honourable House to certain provisions contained therein, which in practice work with greater stringency than we believe it was intended they should by the original framers of the Act.

We beg to call the attention of your Honourable House to clauses 13, 17, 18 and 19, which provide that the averages of our circulations, taken for each succeeding period of four weeks, shall not exceed certain fixed limits.

We beg respectfully to represent to your Honourable House, that in consequence of the shortness of the time permitted to issuing bankers by these clauses, for taking the averages, they are unable to avail themselves of their circulations to the full extent granted by law.

At certain seasons of the year there are temporary demands for increased local circulation arising from fairs, from the accumulation of notes in the hands of tenants for some time previous to their rent days, and other causes, bankers cannot at these times extend their circulations for fear of being unable to contract their issues so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England Notes, to the no small annoyance of their customers; gold being an inconvenient medium of exchange for large amounts, and Bank of England Notes not being freely taken in country districts from a greater apprehension of forgery than exists with the well-known local issues.

When this temporary demand ceases, a further effect of this unnatural restriction is felt by the bankers. Their circulations contract, and they are unable to restore them to their natural limit until another period of activity commences.

We beg respectfully to represent to your Honourable House, that if the time permitted to bankers for taking the averages of their circulations were extended from one month to six months, and the year divided into two periods of six months each, they would then be able to avail themselves of their circulations to very nearly the full extent permitted them by law, and to facilitate the transaction of business to their customers and the public generally. We believe that bankers throughout the country would look upon this change with great satisfaction, and as it would not in any way infringe upon the principle of the Act of Parliament above referred to, we beg respectfully to suggest to your Honourable House that this change should be embodied in the Bill, to be brought before your Honourable House during the present Session.

We would further respectfully represent to your Honourable House, that by the Scotch and Irish Banking Acts of 1845, 8 & 9 Vict., c. 37 & 38, which are complements to the English Act of 1844, the Scotch and Irish banks are allowed to issue beyond their fixed limits, a sum equal to the amount of gold and silver held by them respectively, in accordance with the principle which regulates the issue department of the Bank of England.

Appendix, No. 44.

We therefore respectfully pray your Honourable House, that we should be put upon the same footing as the Scotch and Irish banks in this respect, and thus be enabled to meet with greater regularity and certainty the legitimate business wants of our respective districts than we are able to do at present, and to obviate the difficulties and inconveniences under which we at present labour. As this would be in entire accordance with the principles of the legislative measures of 1844 and 1845, we trust that your Honourable House will see no difficulty in granting the concession.

And your petitioners will ever pray, &c.

PETITION of *William Brown*, President of, and as representing the Glasgow and West of Scotland Guardian Society for the Protection of Trade.

The Petition of William Brown, President of, and as representing the Glasgow and West of Scotland Guardian Society for the Protection of Trade, comprising upwards of 1,000 Members, consisting of Bankers, Merchants, Manufacturers, and Traders, carrying on business in Glasgow and elsewhere,

Humbly showeth,

That your petitioners most respectfully take the liberty of addressing your Honourable House for the purpose of requesting your consideration to some of the following reasons, which they would beg leave to submit with the view of procuring a repeal, or at least a very considerable modification, made in the provisions of the Act to regulate the issue of bank notes in Scotland :—

1st. Because your petitioners consider that the provisions for regulating the issue of notes in Scotland are erroneous in theory, and have been found in practice to inflict an unnecessary burden on the mercantile community.

2d. Because the said provisions are unfair in their operations, and introduce inequalities which are uncalled for in the conditions on which the banks in Scotland carry on their business.

3d. Because the said provisions are useless for the purpose for which they were intended, viz., to maintain the convertibility of the bank note, and to secure the due payment of the same in gold.

4th. Because the stock of bullion at present held by the banks is unnecessarily large, and so much capital lying waste and unproductive locked up in the safes of the banks.

5th. Because the provisions contain no mode whereby the circulation can be extended or re-adjusted, so as to meet the increase in the trade and commerce of the country, or in the progress and development of individual banks.

That, in the event of the said provisions not being repealed, your petitioners would most respectfully beg leave to submit for the consideration of your Honourable House the following suggestions, and which, if carried into practice, would, they humbly think, be the means of procuring considerable relief to the mercantile community :—

1st. That a fresh average be annually or triennially taken on the basis of the circulation of the previous year, or the previous three years; or,

2d. That a certain amount of fixed circulation be allowed to each bank on the basis of its paid-up capital, say one-third; or,

3d. If no alteration is to be made in the proportions of the circulation as at present fixed and allowed, then it is respectfully submitted that each bank be permitted to hold three-fourths of the excess in Government securities, and one-fourth in gold.

May it therefore please your Honourable House to take this petition into consideration, and grant such relief as shall appear just and proper to your Honourable House, or to do otherwise, as shall be considered expedient.

And your petitioner will ever pray.

William Brown.

PETITION of Bankers in the City of *Coventry*.

To the Honourable the Commons of the United Kingdom of *Great Britain* and *Ireland*, in Parliament assembled.

We, the undersigned bankers, issuing our own notes, under the provisions of the Act of Parliament 7 & 8 Vict. c. 32, in the city of Coventry, in the county of Warwick, without venturing to offer any opinion as to the general principles of the Act, respectfully beg to call your attention to certain provisions contained therein, which, in practice, work with greater stringency than we believe it was intended they should by the original framers of the Act.

We beg to call your attention to clauses 13, 17, 18, and 19, which provide that the averages of our circulations, taken for each succeeding period of four weeks, shall not exceed certain fixed limits.

We beg respectfully to represent that in consequence of the shortness of the time permitted us by these clauses for taking the averages, we are unable to avail ourselves of our circulations to the full extent granted us by law, by amounts varying from 5 to 10 per cent. of our circulations, according to circumstances.

At certain seasons of the year there are temporary demands for increased local circulation, arising from fairs, and other causes. We cannot at these times extend our circulations, for fear of being unable to contract them so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of

Coventry, 1 June 1857.

PETITION of BANKERS in the Counties of *Lincoln* and *Northampton*.

To the Honourable the Commons of the United Kingdom of *Great Britain* and *Ireland*, in Parliament assembled.

The Petition of the undersigned Bankers issuing their own Notes under the provisions of the Act 7 & 8 Vict. c. 32, in the counties of *Lincoln* and *Northampton*,

Showeth,

THAT your petitioners without venturing to offer any opinion as to the general principles of the Act above referred to, beg to call the attention of your Honourable House to certain provisions contained in such Act, which in practice work with greater stringency than your petitioners believe it was intended they should by the original framers of the Act.

That your petitioners beg to call the attention of your Honourable House to clauses 13, 17, 18, and 19, which provide that the averages of their circulations, taken for each succeeding period of four weeks, should not exceed certain fixed limits.

That your petitioners beg respectfully to represent, that in consequence of the shortness of the time permitted them by these clauses for taking the averages, they are unable to avail themselves of their circulations to the full extent granted them by law, by amounts varying from 5 to 10 per cent. of their circulations, according to circumstances.

That at certain seasons of the year there are temporary demands for increased local circulation, arising from fairs, and other causes.

That your petitioners at these times cannot extend the circulation of their notes, for fear of being unable to contract them, so as to reduce the average within the limit in the short time allowed for that purpose, and are therefore compelled to substitute gold and Bank of England notes, to the annoyance of their customers, gold being an inconvenient medium of exchange for large amounts, and Bank of England notes not being freely taken in remote country districts.

That when this temporary demand has ceased, a further effect of this unnatural restriction is felt by your petitioners in the contraction of their circulation, which they are unable to restore to its natural limit until another period of activity commences.

That your petitioners beg respectfully to represent, that if the time permitted them for taking the average of their circulation were extended from one month to six months, and the year divided into two periods of six months each, they would thereby be able to avail themselves of their circulation to nearly the full extent allowed them by law, and to facilitate the transaction of business to their customers and the public generally, without infringing the principle of the Act of Parliament above referred to.

That

That your petitioners beg further respectfully to represent, that by the Scotch and Irish Banking Acts of 1845 (8 & 9 Vict. c. 37 and 38), which are the complements to the English Act of 1844, the Scotch and Irish banks are allowed to issue beyond their fixed limits, a sum equal to the amount of gold and silver held by them respectively, in accordance with the principle which regulates the issue department of the Bank of England.

Your petitioners, therefore, humbly pray your Honourable House, that in any Bill to be introduced for the regulation of the currency, you will be pleased to introduce clauses for extending the time for taking the average of the circulation of country bankers from four weeks to six months, and for enabling them to issue beyond their fixed limits notes for sums of money equal in the aggregate amount to the gold and silver held by them respectively.

And your petitioners will ever pray, &c.

Stamford, Spalding and Boston Banking Company, by
Orlando Edmonds, Managing Director.

William Risbee, Manager of the Northamptonshire Union Bank.

S. Read, Manager of the Northamptonshire Banking Company.

The Lincoln and Lindsey Banking Company, by
W. T. Page, Manager.

PETITION of Merchants, Manufacturers, Shipowners, &c., of the City of *Glasgow*.

The Petition of the undersigned Merchants, Manufacturers, Shipowners, and others of the City of *Glasgow* and its Neighbourhood,

Humbly showeth,

That there are 17 banks in Scotland, composed of 13,991 partners or shareholders, with a paid-up capital of 11,726,260 *l.* sterling.

That previous to the year 1844 the trade of banking in Scotland was free. Scotsmen, if they saw fit, were entitled to associate and carry on business as bankers, and under this freedom from legislative restrictions or control Scottish banks were secure, and the Scottish banking system was looked on as a model worthy of adoption in England and the British colonies, whilst the mercantile, manufacturing, agricultural, and industrious classes generally received monetary accommodation on moderate and reasonable terms.

That in 1844, however, through the connivance of two or three interested bankers, who were assumed to represent the people of Scotland, but wholly unknown to the people themselves, without the same ever having been called for by them, without any reason ever having been assigned, and when the vigilance of the Scottish Members of Parliament was lulled asleep by the declaration of the late Sir Robert Peel, when introducing the Bank of England Charter Act of that year, that the legislation affecting Scottish and Irish banking would be postponed till next Session (1845), a monopoly was enacted by the substitution of the words "United Kingdom" for the word "England" in the said Act; and the formation of new banks of issue in all time coming were strictly prohibited.

That this monopoly was not only insidiously enacted, but it was in direct opposition to the principles of free trade recognised by the British Legislature, for it is impossible in the nature of things there can be free trade in commodities in the true sense, if the trade in the very means or instruments by which commodities are to be measured or estimated and interchanged is a monopoly in the hands of comparatively a few privileged parties, whose interest is adverse to the interests of all other classes of the community.

That in like manner the restriction of the issues or bank note circulation imposed by the Act 1845, and prohibition of any increase in the circulation except in proportion to gold coin held in reserve by the banks, irrespective of all increase of population or extended trade or greater demands for monetary accommodation, was equally uncalled for and equally impolitic. The holding of gold coin is not only unprofitable, but it affords little more than a nominal security to the public, inasmuch as it just displaces capital in some other shape yielding profit or returns, whereas the gold yields none, whilst as a rule it operates most unequally and inequitably amongst the banks themselves, having no reference whatever to their different amount of capital, circulation, or deposits. In fact, it is a purely arbitrary regulation, without any valid reason or principle for its adoption. It constitutes no adequate security for the payment or conversion of the notes, and far less does it guarantee the deposits, whose receipt holders, if any special security is necessary at all, require to be guaranteed just as much as, if indeed not more, than the holders of the notes.

That in the 20 years betwixt 1825 and 1845, five new native joint stock banks were established in the city of Glasgow, namely, the Union Bank, now the Union Bank of Scotland, Western Bank, Clydesdale Bank, City Bank, and Edinburgh and Glasgow Bank. But during the last 12 years, or since the enactment of the monopoly, not a single new bank has been established, although the population, trade, commerce, and shipping of the city and harbour, and demands for monetary accommodation have increased in a much greater ratio, in fact have been positively much greater in these 12 years than during the previous 20. As a consequence of this monopoly, the shares of all the Scottish banks are at large

Appendix, No. 44.

premiums. The dividends range from 6 to 10 per cent., the average being 8 per cent.; but all this gain of the banks in virtue of their monopoly just implies high and usurious rates of interest and discount exacted from the public; the gains or prosperity of the banks are simply synonymous with the losses and injury of the commercial and industrious and producing classes who are dependent for monetary accommodation on the banks; and such losses and injury will continue to be sustained so long as the right of competition or of free trade in banking is denied to the people—so long as the banking and money interest is protected and pampered by the Legislature.

That, if the population, trade, and commerce of Glasgow during these 20 years could sustain five new banks with advantage to themselves and the public, the inference is that the increased and still extending trade, shipping, and commerce of the city and harbour afford room for additional banks, and there is no reason why the new race of manufacturers, traders, and merchants who have established themselves in business since 1845 should be deprived of the privileges which their predecessors enjoyed, or be prevented from combining their own credit, and adding to the money power of the community.

Contrasted with the number of banks in England or Australia or Canada, and the amount of circulation in proportion to capital and with reference to population, Scottish banking is unduly restricted; and it may well be asked, Why should Scotland, which originated the joint-stock system, and taught England and our colonies the science or true principles of banking, be less free in her banking operations than either Victoria or Canada? Why should her sons who stay at home be denied the privilege of being their own bankers, while those who emigrate are free and unrestricted?

That when the Act of 1845 was under discussion in the House of Commons, Sir Robert Peel declared that the monopoly which had been created in 1844 unknown to the Scottish Members might be relaxed at the expiry of the Bank of England Charter Act, or when it came to be renewed, on application being made or cause shown for such relaxation.

That your Petitioners are satisfied that the policy of restricting the number of banks in Scotland is exceedingly fallacious. It can have no other effect than to increase the power and profits of those who deal in and live by money at the expense of the industrious and productive and commercial classes.

That your Petitioners are of opinion that the expediency of affixing a price or monetary denomination to our gold coins or sovereigns ought to be a principal point of inquiry by the Committee on the Bank Charter Act, and also that all monopolies of banking and undue and arbitrary restrictions should be done away, and that there should be as much freedom in banking as in baking—in the supply of money as in the supply of food; and that cheap or low prices for the one are not more important than cheap or low rates of usance or interest for the other.

But what your Petitioners wish more immediately to press on the attention of your Honourable House is, that the prohibition against the formation of new banks in Scotland and the law as to the reserves of gold should be repealed, or at all events revised, amended, or relaxed, to the effect of permitting the formation of new banks in Scotland, especially in the city of Glasgow and other localities where the population, trade, and commerce have increased, and in proportion to such increase; and the substitution of Government securities to be held by the banks instead of gold coins as a security for the payment or convertibility of their notes.

May it therefore please your Honourable House to take this Petition into consideration, and, with or without remitting the same to the Committee on the Renewal of the Bank Charter Act, to alter, amend, modify, or relax the Acts of 1844 and 1845 to the effect foresaid.

And, as in duty bound, your Petitioners will ever pray, &c.

Wm. A. G. M'Leod.
A. Adamson.
A. M'Lachlan.
&c. &c. &c.

CIRCULATION (PAPER CURRENCY):

I. *Bank of England:*
1. Term "Circulation" defined - 385
2. Amount in different Years - 386
3. Periodical Fluctuations in the Amount 386
4. Increased Circulation of smaller Notes, and of Gold and Silver - 386
5. Decreased Circulation of the larger Notes - 386
6. Notes of the Branch Banks - 386
7. Bills of Exchange, Branch Banks - 387
8. Accounts and Papers laid before the Committee - 387

II. *Bank of Ireland* - 387

III. *Country Banks:*
1. Term "Circulation" defined - 387
2. Amount at different Periods - 387
3. Papers laid before the Committee - 388

IV. *Generally:*
1. Aggregate Circulation in 1834, 1844, and 1855 - 388
2. Greater Economy of the Circulation of late years - 388
3. Fluctuation respectively of a Mixed Circulation and of a Metallic Circulation - 388
4. Absence of power in Banks of Issue to affect the Aggregate Circulation 389
5. Evidence opposed to the foregoing Proposition; Power of Banks to over-issue, and thereby to cause considerable disaster - 389

I N D E X.

[*N. B.*—In this Index the *Figures* following the Names of the Witnesses refer to the Questions in the Evidence, and those following *App. p.* to the Paging of the Appendix.]

A.

Accounts (*Bank of England*):

1. *Form of Weekly Account now published; its Advantages.*
2. *Exceptions taken to the present Form.*
3. *Delay in Publication; Amendment contemplated.*
4. *Form of Account proposed by Mr. Wilson; Objections thereto.*
5. *System of Account previously to* 1844.

1. *Form of Weekly Account now Published; its Advantages:*

Explanation as to the items of a paper (*App. p.* 241), being a copy of the weekly account of the Bank on the 9th May last, *Weguelin* 825–828——The liabilities and assets of the Bank are divided under the heads of Issue Department and Banking Department, for the purposes of the Act of 1844, as a matter of account, and may not strictly represent the real circumstances of the Bank, *ib.* 840–848——As regards the item "notes" in the account of the banking department, it doubtless represents part of the bullion in the same department; doubt as to any misconception hereon on the part of the public, *ib.* 841–848. 861–866. 880–887——Witness has become accustomed to the present statement, and considers it the clearest that can be made, *ib.* 887.

The advantage of the present separation of the accounts is, that it keeps before the eyes of the public the restraint upon the Bank not to issue more than 14,000,000*l.* upon securities, *Weguelin* 1118–1167——There would be no difficulty in publishing the weekly account in two forms, *ib.* 1251, 1252——Further approval of the present form of account, as admitting of clear apprehension on the part of the public, *ib.* 1297–1300.

Opinion that too much information is given in the published accounts of the Bank; the public do not yet properly comprehend them, *Hubbard* 2422, 2423. 2426–2428——Approval of the form or principle on which the accounts are exhibited, *ib.* 2424–2426.

Approval of the present form of accounts of the Bank, as the best means of representing the real condition of the currency, *Norman* 2982–2987. 3222. 3223.

The alteration in the form of accounts has been extremely beneficial with regard to the instruction and guidance of the public, *Right Hon. Lord Overstone* 3961–3963——In proof of the great importance of the present form of accounts, witness is prepared to show that had such form been in practice during the different pressures before 1844 immense good would have resulted; evidence in detail hereon, *ib.* 4171 *et seq.*——The publication in 1833–37 of the present form of account would have caused a salutary contraction of the currency at an earlier period, *ib.* 4184, 4185.

Account, pursuant to the Act 7 & 8 Vict. c. 32, for the week ending on Saturday the 9th day of May 1857, *App. p.* 241.

2. *Exceptions taken to the present Form:*

Consideration of the present form of account published weekly by the Bank of England; concurrence in the view of Mr. Wilson as to the deceptive character of the account in its leading particulars, *Newmarch* 1680–1698——Wrong impression produced upon the public mind by the present form of account, in regard to the cause of variations in the reserve, *ib.* 1695–1698.

Exception taken by Mr. Blair, manager of the Bank of Scotland, to the present system of publication of the Bank accounts, *App. p.* 329.

3. *Delay in Publication; Amendment contemplated:*

Explanation as to the weekly accounts up to Saturday not being published till the following Friday, *Weguelin* 461, 462. 465——Proposition of the Bank to bring the accounts

Report, 1857—*continued.*

Accounts (*Bank of England*)—continued.

3. *Delay in Publication; Amendment contemplated*—continued.

accounts down to Wednesday, so that there may be an interval only of one day before publication, *Weguelin* 463, 464. 466–471——Advantage in the public being furnished with the latest information as to the reserve of bullion, *ib.* 465. 471–474——Advantage in making up a weekly account for the "Gazette" of Friday rather than of Tuesday, *ib.* 1243, 1244.

4. *Form of Account proposed by Mr. Wilson; Objections thereto:*

Consideration of two altered forms of account (produced by Mr. Wilson), showing the total liabilities and assets, without any distinction between the banking and issue departments; doubt whether they are any improvement upon the existing form, *Weguelin* 849–876. 885–887——Question as to the advantage of a different form of account, in order that the public might see that a decline in the reserve represents a variation in the bullion and not the active circulation, *ib.* 1118. 1129, 1130——Consideration of a form of account (produced by Mr. Wilson) in use since 1832 in the case of colonial banks of issue; doubt as to any advantage if a similar form were adopted by the Bank of England in lieu of the present double form, *ib.* 1168–1180.

Exception taken to the form of account proposed by Mr. Wilson, *Neave* 1175, 1176.

Strong objections to any alteration which should involve a blending of the separate accounts of each department, *Right Hon. Lord Overstone* 3961–3963. 4171, 4172. 4184, 4185. 4199, 4200.

5. *System of Account previously to* 1844:

The monthly account previously to 1844 did not give so much information as the present accounts, *Hubbard* 2427, 2428——Preparation previously to 1844, for the private convenience of the Bank directors, of an account similar to that now published, *Norman* 3099–3101——In the old form of account the circulation of the Bank, as published, showed only the notes in the hands of the public, such notes constituting the only liabilities of the Bank in regard to its circulation, *ib.* 3224–3227.

The account adopted by the Bank directors, previously to 1844, relative to a separation of the departments, was merely a tentative account for their private information, *Right Hon. Lord Overstone* 3897, 3898. 4170——Objections to the former system of blending the accounts, *ib.* 3961–3963. 4171, 4172. 4199, 4200.

Act 7 & 8 *Vict. c.* 32:

1. *General Approval and recommended Renewal of the Act of* 1844.
2. *Exceptions taken to the operation of the Act.*
3. *Object of passing the Act for only Ten Years.*

1. *General Approval and recommended Renewal of the Act of* 1844:

On the whole, witness fully approves of the Act of 1844, and is not prepared to recommend any material alteration in it, *Weguelin* 35–37. 77. 1330——The Act has, in witness's opinion, worked well for the public, *ib.* 215.

Witness considers that the principle of the Act of 1844 has acted most beneficially, and requires no alteration in any essential point, *Hubbard* 2515.

Witness gave evidence before the Select Committee in 1840, whose inquiries had reference to the Act of 1844; thoroughly approves of the Act, *Norman* 2857–2860——The more stringent measures, shown by the experience of 1825, 1837, and 1839 to have been required, were most usefully afforded by the Acts of 1844 and 1845, *ib.* 3435–3437——The general opinion of mercantile authorities is opposed to any relaxation of the Act, *ib.* 3540. 3625, 3626.

Witness gave evidence before the Select Committee in 1840, on Banks of Issue, and also before the Committee of the House of Lords in 1848, on Commercial Distress, and expressed himself strongly on those occasions in favour of the principles embodied in the Act of 1844, *Right Hon. Lord Overstone* 3640–3643——Has year by year become more and more convinced of the soundness of the policy of the Act, and is strongly in favour of its renewal, *ib.* 3642-3645——Considers that public opinion has of late years become much confirmed in favour of the Act, and refers on this point to what may properly be termed the unanimous declaration in its favour by the Bank directors, *ib.* 3645.

Witness has drawn up a short statement of his views upon the several heads embraced in the present inquiry, and reads the same to the Committee; the several propositions contended for are put forth as a conclusive argument in favour of the Act, *Right Hon. Lord Overstone* 3648——Witness further repeats his strong approval of the Act of 1844, the renewal of which without discussion would have been the wisest course that could have been adopted, *ib.* 3704, 3705——Growing feeling in monetary and commercial classes in favour of the Act, *ib.* 3705–3719——Soundness of the state of the currency at the present time, and ever since the passing of the Act, though within the last ten years it has been subjected to some most trying ordeals, *ib.* 3706–3718.

Had

Report, 1857—*continued.*

Act 7 & 8 Vict. c. 32—continued.

1. *General Approval and recommended Renewal of the Act of* 1844—continued.

Had the Act of 1844 been in operation in 1825 and 1837, or during other crises, it must have prevented the diminution of bullion which took place, *Right Hon. Lord Overstone* 3987-3995——The practical merit of the Act is, that it compels the right course to be adopted, *ib.* 3995——Witness cannot offer any suggestion in improvement of the Act, *ib.* 4125.

Evidence in detail with reference to the several pressures between 1783 and 1844, showing that the evils which arose must have been mitigated or prevented if the Act had been in operation, *Right Hon. Lord Overstone* 4173-4188——Witness submits that it is clear to demonstration that if the Act of 1844 had been in operation in 1824 and 1825, it must have prevented or greatly mitigated the evils which occurred, *ib.* 4182——Argument showing that the provisions of the Act of 1844, if applied in the period between 1833 and 1839, would have rendered it impossible that monetary affairs should have reached such disastrous extremities, *ib.* 4184, 4185.

Witness repeats his unqualified approval generally of the principles of the Act; he looks upon it as a noble work, and feels confident that the Committee will never take upon itself the disgrace of destroying such a work, *Right Hon. Lord Overstone* 4189, 4190.

Letter from Mr. Weguelin to the Chancellor of the Exchequer, dated 10th November 1856, in general approval of the Act of 1844, *App. p.* 1–4.

Statement by Mr. Neave in approval of the Act, *App. p.* 4, 5.

Renewal of the Act of 1844 recommended by Mr. Neave, *App. p.* 5——Also by Mr. Cotton, *ib.* 7——Also by Mr. Hanson, *ib.* 8. 20, 21——Also by Mr. Lyall, *ib.* 8——Also by Mr. Morris, *ib.*——Also by Mr. T. C. Smith, *ib.* 9——Also by Mr. Hunt, *ib.* 9110——Also by Mr. Currie, *ib.* 10——Also by Mr. Gibbs, *ib.* 10——Also by Mr. Hubbard, *ib.* 12. 22——Also by Mr. Norman, *ib.* 16——Also by Mr. Latham, *ib.*——Also by Mr. Blake, *ib.* 17——Also by K. D. Hodgson, *ib.* 18——Also by Mr. H. H. Berens, *ib.*——Also by Mr. Malcomson, *ib.* 18. 20——Also by Mr. Crawford, *ib.* 18——Also by Mr. B. B. Greene, *ib.*——Also by Mr. F. Wilson, *ib.* 19——Also by Mr. Dobree, *ib.* 21.

Decided approval by Mr. Cotton of the Act of 1844; convertibility of the note secured thereby, *App. p.* 6, 7.

General approval of the Act by Mr. H. C. Huth, who, suggests however an enlargement of some of its limitations, *App. p.* 9.

Remarks by Mr. G. W. Norman, in approval of the operation of the Act, *App. p.* 14–16.

Decided approval by Mr. H. W. Blake of the Act of 1844, *App. p.* 17.

Re-enaction without material alteration of the existing currency laws recommended by Messrs. G. W. Norman, K. D. Hodgson, H. H. Bernes, J. Morris, J. Malcomson, Thomson Hankey, J. P. Currie, R. W. Crawford, and H. W. Blake, *App. p.* 18.

General approval of the Act by Mr. B. B. Greene, *App. p.* 18.

Partial approval by Mr. F. Wilson of the Act of 1844, *App. p.* 19.

2. *Exceptions taken to the Operation of the Act:*

Beneficial operation of the Act in certain stages of a period of overtrading, but on such occasions only, *Mill* 2020. 2030, 2031——Way in which the Act has operated usefully during the first stage in the progress of a revulsion of credit consequent upon over-speculation, *ib.* 2031. 2104, 2105. 2194. 2304——Way in which the Act has operated mischievously during the last stage in the progress of a revulsion of credit, or when the revulsion has actually come, *ib.* 2031. 2038. 2102. 2194——The Act is especially mischievous in those cases of drain which do not arise from previous over-speculation, *ib.* 2038——Witness considers that the whole theory of the Act is erroneous, and that the Act should be repealed, *ib.* 2283–2285.

When money is easy the Act of 1844 does not operate prejudicially; it is only on a pressure that its restrictions are felt, *Alexander* 4322–4329.

The Act of 1844, which was intended as a complement to that of 1819, has doubtless operated extremely beneficially to the bankers and large capitalists, by enabling them to obtain unduly large rates of interest, *Twells* 4487–4489. 4500, 4501. 4649–4654. 4745–4747. 4781–4795——Argument that the Act has, on the other hand, been exceedingly prejudicial to small capitalists and tradesmen, and that the fluctuations and pressures under the Act have been very injurious to the trade and prosperity of the country generally, *ib.* 4488. 4490–4511. 4612–4617. 4748–4750.

The Act of 1844 has very great merits, but is very defective in its want of provision against withdrawal of the circulation from various causes, *Chapman* 4904. 4907. 4962, 4963.

Report, 1857—*continued.*

Act 7 & 8 Vict. c. 32—continued.

2. *Exceptions taken to the Operation of the Act*—continued.

Written statement of the grounds upon which witness considers that the principles of the present monetary system are unsound, *Capps* 5445.

Statement by Mr. Horsley Palmer, dated the 15th October 1856, in decided disapproval of the Act of 1844, *App. p.* 6.

3. *Object of passing the Act for only Ten Years:*

Probability of the Act having been made temporary for ten years with a view to its re-consideration at the end of that period, *Norman* 3627, 3628——Grounds for concluding that the Act, though passed for only ten years, was intended for a continuous measure; that is, that its principle was intended to be permanent, *Right Hon. Lord Overstone* 4196. 4201–4215——Remarks upon a question put by Mr. Wilson to Mr. Weguelin (Q. 913), in which he seemed to assume that Sir Robert Peel contemplated that the Act of 1844 should last for ten years and no longer, *ib.* 4201. 4204–4212——Modification in the details of the Act are perfectly consistent with the intention that it should be a permanent measure, *ib.* 4202.

Act 7 & 8 Vict. c. 113. Complaint by the manager of the Clydesdale Banking Company in regard to the extension of this Act to Scotland, *App. p.* 332.

Statement submitted to the Chancellor of the Exchequer by the Union Bank of Scotland, the Western Bank of Scotland, the Clydesdale Banking Company, the Edinburgh and Glasgow Bank, and the City of Glasgow Bank, representing the very serious disadvantages which, as not being incorporated, they suffer under the Act 7 & 8 Vict. c. 113, and suggesting means for remedying the evil, *App. p.* 332, 333.

Memorial for the Union Bank of Scotland and the Western Bank of Scotland relative to a question under the Act of 7 & 8 Vict. c. 113, as to the rights of a Scotch joint stock company over the shares of a partner, and opinion of the Lord Advocate and the Solicitor-general of Scotland thereon, dated 9 February 1853, *App. p.* 334, 335.

Case for the five unincorporated banks in Edinburgh and Glasgow, for the opinion of the Lord Advocate, as to the provision of the Act 7 & 8 Vict. c. 113, which limits to twenty years the duration of all incorporating charters or letters patent granted under it; and opinion of the Lord Advocate thereon, dated 18th February 1850, *App. p.* 336, 337.

Objections by the manager of the Union Bank of Scotland to the unequal operation in Scotland of the Act 7 & 8 Vict. c. 113, *App. p.* 337.

Strong objection on the part of the Edinburgh and Glasgow Bank to the operation of the Acts 9 & 10 Vict. c. 75, and 7 & 8 Vict. c. 113, as being very prejudicial to the unincorporated Scotch banks, *App. p.* 339.

Act 8 & 9 Vict. c. 38:

1. *Views of the Bank Directors; Approval generally of the Act.*
2. *Views of the Managers of Scotch Banks; Alterations suggested in the Act.*

1. *Views of the Bank Directors; Approval generally of the Act:*

Amendments suggested by Mr. Norman as regards the Scotch and Irish banks, *App. p.* 5, 6.

Amendment suggested by Mr. J. Horsley Palmer, *App. p.* 6.

Approval by Mr. J. H. Hanson of the Irish and Scotch Acts of 1845, *App. p.* 8.

Approval by Mr. G. Lyall of the Acts of 1845, *App. p.* 8.

General approval by Mr. T. C. Smith of the Acts of 1845, *App. p.* 9.

Remarks by Mr. Masterman on the inconvenient working of the Irish Act of 1845, in regard to the transmission of gold from England, *App. p.* 10.

General approval by Mr. J. P. Currie of the Acts of 1845, *App. p.* 10.

General approval by Mr. H. H. Gibbs of the Acts of 1845, *App. p.* 10.

Remarks by Mr. J. G. Hubbard to the effect that the Irish and Scotch banks cannot be considered as being aggrieved by the Acts of 1845, *App. p.* 13.

Suggestions

Report, 1857—*continued.*

Act 8 & 9 *Vict.* c. 38—continued.

1. *Views of the Bank Directors; Approval generally of the Act*—continued.

Suggestion by Mr. Norman that there be a fixed maximum issue for the Scotch and Irish banks, *App. p.* 15.

Question by Mr. B. Dobree as to the policy of continuing to the Irish and Scotch banks the privilege of an issue of notes against an equal amount of gold coin, *App. p.* 21.

2. *Views of the Managers of Scotch Banks; Alterations suggested in the Act:*

Letter from Mr. Alexander Blair, manager of the Bank of Scotland, to Sir G. C. Lewis, dated the 25th November 1856, stating that the Act of 1845 has been inoperative as regards the Bank, with the exception of the expense of the additional reserve of gold, *App. p.* 328, 329.

Letter from Mr. Wright, manager of the Royal Bank of Scotland, to Sir G. C. Lewis, dated the 3d December 1856, approving of the principle of the Act 8 & 9 Vict. c. 38, but suggesting an enlargement of the circulation assigned to the Scotch banks, and an extension of the period for striking the averages to eight weeks, *App. p.* 329, 330.

Letter from Mr. Corrie, manager of the British Linen Company Bank, to the Chancellor of the Exchequer, dated the 25th November 1856, in approval of all the provisions of the Act 8 & 9 Vict. c. 38, *App. p.* 330.

Letter from Mr. Mackenzie, manager of the Commercial Bank of Scotland, to Sir G. C. Lewis, dated the 27th November 1856, in approval of the Act 8 & 9 Vict. c. 38, and deprecating any measure which would admit of excessive competition in Scotch banking, *App. p.* 330.

Letter from Mr. Duncan, manager of the National Bank of Scotland to Sir G. C. Lewis, dated the 29th November 1856, in general approval of the Act 8 & 9 Vict. c. 38, but suggesting that it might be expedient to revise and extend the authorised issues of the Scotch banks, *App. p.* 331.

Letter from Mr. Readman, manager to the Clydesdale Banking Company to Sir G. C. Lewis, dated the 14th February 1857, complaining of the operation of the Act 8 & 9 Vict. c. 38, in regard to the unincorporated banks of Scotland, and suggesting important alterations in the Act, *App. p.* 331, 332.

Letter from Mr. Robertson, manager of the Union Bank of Scotland to Sir G. C. Lewis, dated the 14th February 1857, offering strong objections to the Acts 8 & 9 Vict. c. 38, and 7 & 8 Vict. c. 113, and suggesting certain amendments therein, *App. p.* 337, 338.

Letter from Mr. Kerr, manager of the Edinburgh and Glasgow Bank to Sir G. C. Lewis, dated the 20th February 1857, offering several objections to the unequal operation of the Acts 6 & 7 Vict. c. 38, and 9 & 10 Vict. c. 75, and suggesting certain amendments therein, *App. p.* 338, 339.

Letter from Mr. Taylor, manager of the Western Bank of Scotland to Sir G. C. Lewis, dated the 14th February 1857, in strong disapproval of the Act 7 & 8 Vict. c. 38, and suggesting certain amendments therein, *App. p.* 339, 340.

Letters dated respectively the 27th April 1854 and the 8th May 1854, from Mr. Taylor to Mr. Gladstone (then Chancellor of the Exchequer), suggesting important alterations in the Act of 1845, more especially that the Scotch banks might be allowed to issue on Government securities beyond the authorised amount, *App. p.* 340–342.

Letter dated the 12th December 1855, from the managers of the Glasgow Banks to Sir G. C. Lewis, suggesting that the Scotch banks be allowed to hold Government securites in lieu of gold, for the excess of circulation or for a certain portion of it, *App. p.* 342, 343.

Letter from Mr. Salmond, manager of the City of Glasgow Bank to Sir G. C. Lewis, dated the 19th February 1857 in disapproval of the Act 7 & 8 Vict. c. 38, and suggesting certain amendments therein, *App. p.* 343.

See also *Ireland. Scotland.*

Act 9 & 10 *Vict. c.* 75. Statement on the part of the Clydesdale Banking Company, with reference to the prejudicial operation of the Act 9 & 10 Vict. c. 75, extending to Scotland the English Joint Stock Bank Act, 7 & 8 Vict. c. 113, *App. p.* 332——Memorandum of alterations since 1853 in the statute 9 & 10 Vict. c. 75, *ib.* 332.

Advances (*Bank of England*). Restrictions and changes adopted by the Bank in regard to temporary advances upon stock and other securities, with a view to the protection of the reserve, *Weguelin* 31–34——The advance of capital by the Bank, and the amount of bullion and of securities held by the Bank may be said to be uncontrolled by the Act of 1844, *ib.* 1105——Tendency of large advances by the Bank temporarily to increase the circulation to a limited extent, *Hibbard* 2607–2614——The demand for advances which

Reports, 1857—*continued.*

Advances (*Bank of England*)—continued.

is consequent upon an adverse foreign exchange, mainly exhibits itself in the withdrawal of bullion, *Hubbard* 2616-2627. 2683-2685——Advances by the Bank upon Government securities, and discounts of good bills are usually made at the same rate, *ib.* 2845.

Return containing particulars as to the amounts advanced by the Bank on loan from the 1st January 1844 to the 1st January 1848, *App. p.* 36-43——Similar particulars for the period from the 8th January 1848 to the 27th December 1856, *ib.* 44-61.

Account of the total amount of temporary advances by the Bank of England, from the last day of each week from the 7th September 1844 to the 24th December 1847, *App. p.* 114-119——Similar account from the last day of each week from the 1st January 1848 to the 27th December 1856, *ib.* 120-135.

Return of the amount advanced by the Bank for temporary loans upon Exchequer bills, bills of Exchange, India bonds, &c., in each quarter from the 5th April 1848 to the 5th January 1857, *App. p.* 283.

See also *Discounts* (*Bank of England*). *Rate of Interest.* *Term of Bills.*

Advances of Capital. Encouragement of speculation by advances of capital, *Weguelin* 995. 1011 *et seq.*——Effect of advances of capital, but not of the amount of circulation, on trade and prices, *ib.* 1131-1135.

Witness does not think that any great mischief is ever fomented or produced by real advances of capital, *Right Hon. Lord Overstone* 3990.

Argument by Mr. Blair, manager of the Bank of Scotland, that the regulation of the advances of capital, not of the circulation, is the correct rule for the purpose of avoiding violent fluctuations in commerce and manufactures, *App. p.* 328, 329.

Alexander, Nathaniel. (Analysis of his Evidence.)—Is the head of the firm of Alexander and Co., India merchants, 4249-4251——The India trade is carried on upon very long credits, and chiefly in bills, 4252——The operation of the Bank of England is of very great importance to the trade, 4253, 4254.

Opinion that the object of the Act of 1844 was partly to secure the value of the currency, and partly to check over speculation and over-credit, 4255, 4256——Objection to the issue of bank notes, being a legal tender, except in such quantities as may be met by the issuer in gold, 4257-4259. 4270. 4289, 4290. 4312, 4313——Way in which the issue of 14,000,000*l.* in notes on securities weakens the position of the Bank, and impairs its power of affording relief when most required, 4259. 4270. 4313.

Suggestion that in lieu of bank notes issued on securities there be an issue of legal tender notes, receivable by Government in payment of taxes, but not convertible into specie on demand, 4259. 4270 *et seq.*——These notes should be issued by Government; the Bank of England should receive them in return for securities, and they should be a legal tender when paid out of the Bank, 4259, 4260. 4270-4273. 4290-4295. 4352.

With regard to the crisis in October 1847, witness considers that the Bank could not have gone on, and that there would have been a general stoppage of all credit transactions but for the Government letter, 4261, 4262. 4269, 4270. 4283, 4284——Depreciation of property to the extent generally of not less than 300,000,000*l.* by the panic and discredit in 1847; 4263-4265——The panic in question was not through fear of the safety of the Bank of England, but in consequence of the restrictions imposed by the Act upon the Bank issues, such restrictions causing a general apprehension of want of notes, 4265-4270. 4274-4276. 4285-4288. 4348-4350. 4360-4362.

Way in which the position of the Bank would be much strengthened by the proposed inconvertible notes to be issued by Government, 4270 *et seq.*——More equable state of the money under the proposed system, 4273——Importance of less frequent variation in the rate of interest in the case of the India trade and other trades conducted on long credits, 4273. 4326. 4363——Belief that if the Bank had had power in 1847 to issue inconvertible notes, on security, the panic would have been obviated, 4274-4276. 4287, 4288.

Suggestion that some arrangement be made, even though it involve an expense to Government, whereby the Bank should keep the whole of its capital subject to short transactions; illustration hereon of the evil of long investments of the Bank capital, 4277-4282.

Besides the proposed inconvertible notes the Bank of England should issue upon gold, 4289, 4290——The holders of bank notes only should have a right to claim gold in payment for their notes, 4291-4299——The inconvertible notes, so called, would, as being receivable in payment of taxes, be to that extent convertible; this is an essential point, 4297-4299. 4303-4307——The maximum issue of these notes might be fixed at 20,000,000*l.*, 4300-4302.

Belief that the proposed inconvertible notes would not be at a discount as compared with the convertible notes, 4308——Country bank notes not being a legal tender, witness does not recommend that such notes should, as well as Bank of England notes, be

Report, 1857—*continued.*

Alexander, Nathaniel (Analysis of his Evidence)—*continued.*

be issued only on gold, 4309-4313. 4318, 4319——If the Bank issues were all on gold, 1 *l.* notes would be an advantage, 4317——Individually witness sees no objection to a discretion in the Bank to issue notes, which should not be a legal tender, not against bullion, 4319.

When money is easy the Act of 1844 does not operate prejudicially; it is only on a pressure that its restrictions are felt, 4322-4329——Effect of the restrictions of the Act in raising the rate of interest, 4325-4329——State of the East Indian trade at the present time; unprofitable nature of witness's trade, 4330-4333. 4364, 4365——Information relative to the long-continued drain of silver to the East; causes of the drain, 4334-4344——The large absorption of bullion from the Banks of England and France since 1853 is chiefly to be accounted for by hoarding on the Continent, 4345-4347.

Evil effect generally of the restriction upon the Bank as regards the use of all the bullion in the Issue Department, 4348-4355——In speaking of the amount of reserve of the Bank before 1844, and subsequently thereto, it should be borne in mind that, according to Act, the reserve is not now entirely available, 4351-4356——Respect in which the restrictions of the Act may be said to check legitimate trade and enterprise, 4357-4359.

Amsterdam Bank. Similar constitution of the banks of Hamburgh and Amsterdam as of the Bank of England adverted to in connection with their means of accommodating the public, *Mill* 2110-2118. 2138-2140——Absence of economy or advantage if, as in the the case of the Hamburgh and Amsterdam banks, it were necessary that every note should be represented by bullion, *ib.* 2218-2220.

Arbuthnot, Mr. Reference to a pamphlet by Mr. Arbuthnot, and to some remarks therein, upon the crisis of 1825; strong recommendation of this pamphlet to the notice of the Committee, *Right Hon. Lord Overstone* 4182.

Artificial Regulation of the Currency. There is practically no artificial regulation of the currency by the Act of 1844; witness is strongly opposed to any action upon the currency save the action of natural laws, *Norman* 3454-3457. 3516. 3589-3591——Under any artificial regulation the contraction would in all probability be less regular and more mischievous, *ib.* 3516-3519. 3610.

Reference to the present monetary system as being highly artificial, *Chapman* 5173. 5329.

Audit Roll (*Payment of Dividends*). Practice quarterly in making up the audit roll for the payment of the dividends; exception taken to the rule of the Government hereon in supplying the audit roll to the Bank from day to day, *Weguelin* 145-154.

Averages (*Country Circulation*). See *Country Banks*, VI.

B.

Bank of France. Efflux of gold from this country in consequence of the premium given thereon by the Bank of France, *Weguelin* 24, 24*——Purchase of bullion by the Bank of France by means of existing bills upon England; nugatory character of the transaction, *ib.* 563-575——The Bank of France is an example how a circulation is extended and maintained through the medium of banking operations, *ib.* 809——Large bullion reserves of the Bank of France during the late war, although there is no statutory obligation as to the proportion of its reserves, *ib.* 1226-1231——Belief that the Bank is limited to a maximum rate of six per cent. discount, *ib.* 1233——Restriction placed by the Bank upon the terms of loans on bills, *ib.* 1234-1236.

Inference from the absence of legislative limits upon the reserve or the issues of the Bank of France, *Newmarch* 1674-1679——Notwithstanding the free power of action of the Bank, it amply proves its obligation to protect its reserve, *ib.* 1676, 1677——Temporary character of the expedients adopted by the Bank for keeping up its reserve of bullion, *ib.* 1705-1715——Although the Bank has purchased from 80,000,000 *l.* to 100,000,000 *l.* of gold during the last two or three years its reserve is lower now than when it commenced to purchase, *ib.* 1713-1715.

The practice of the Bank of France is an illustration of the unsoundness of the principle of a fixed minimum or maximum rate of interest, *Hubbard* 2370——Contradiction and failure involved in the recent operations of the Bank in giving a premium for gold, *ib.* 2838, 2839.

Consideration of, and strong objection to, the course adopted by the Bank of France during the last few years with a view to the non-suspension of specie payments, *Right Hon. Lord Overstone* 4097-4104. 4118, 4119——Expense to the community in France in consequence of the artificial means adopted for keeping up the store of bullion, and the convertibility of the paper money, *ib.* 4105-4111.

Bank of Ireland. Suggestion by Mr. B. B. Greene that the notes of the Bank of Ireland be made a legal tender in Ireland, *App. p.* 19.

Report, 1857—*continued.*

Bank of Ireland—continued.

Return of the circulation of the Bank of Ireland in each month from September 1833 to April 1857, *App. p.* 148–152.

Account of the aggregate weekly circulation of notes of the Bank of Ireland, from the 19th October 1844 to the 9th May 1857, *App. p.* 214–232.

Statement submitted to the Chancellor of the Exchequer by the governors and directors of the Bank of Ireland, relating to the several matters brought under his notice by the deputation at their recent interview with him in London, *App. p.* 344, 345.

Argument in favour of the removal of the restriction against lending money on mortgage, as created by the 7th section of the Act 21 & 22 Geo. 3, c. 16, under which the Bank of Ireland was established, *App. p.* 344.

It is submitted by the governors and directors that the Bank of Ireland and other Irish banks of issue having paid or retired their notes at any of their branches other than those where they are by law bound to retire them, should have liberty to re-issue such notes at whatever office they may have been paid, *App. p.* 344.

The governors and directors submit the necessity for some alteration in the law for the protection of the bank against fraud in dealing with corporations who act under seal, *App. p.* 344, 345.

Bank Post Bills. Bank post bills form a species of circulation, and are not classed as deposits, *Weguelin* 632, 633.

Bank of Scotland. Statement by Mr. Blair, manager of the Bank of Scotland, that the Act of 1845 has been inoperative as regards the bank, with the exception of the expense of the additional reserve of gold, *App. p.* 328, 329.

Particulars as to the amount of capital, &c., and of the authorised and actual circulation of the Bank of Scotland in April 1857, *App. p.* 333.

Banking Department (Bank of England). Practically, the bank note is not a legal tender on the part of the Banking Department, *Neave* 1146, 1147. 1158——Argument that the Act intended that notes should be a legal tender in the Banking Department, *Weguelin* 1147–1155. 1158—— Practice of the Banking Department to pay cheques in notes, which are exchangeable in the Issue Department, *ib.* 1149–1153. 1253–1256——Gold cannot be demanded for notes from the Banking Department, but can be demanded from the Issue Department, *ib.* 1149–1153. 1253–1256.

In regard to the liability of the Bank for its notes, the question of legal tender should not be considered as affecting the matter, *Newmarch* 2008.

Grounds for the conclusion that the Bank of England note is a legal tender in the Banking Department, *Hubbard* 2414–2420. 2649–2651——Practice of the Bank to pay its depositors in notes, as being a legal tender in the Banking Department, and subsequently to pay its notes in gold in the Issue Department, *ib.* 2645–2653.

The Banking Department of the Bank of England is, as regards the payment of bank notes, precisely in the same position as a private bank, *Norman* 2964–2967. 2988–2993. 3260–3262. 3547–3555——Notes are a legal tender not only in the case of ordinary bankers, but of the Banking Department, the Issue Department being liable in each case for payment of the notes in gold, *ib.* 2966, 2967. 3269–3285.

Examination to the effect that the notes in the Banking Department represent a similar amount in bullion in the Issue Department, but only in the same way that the notes in the hands of any private banker represent a portion of the bullion in the Issue Department, *Norman* 3228–3255. 3547–3550——The Banking Department holds some coin for the convenience of its customers just as other banks do, and meets its liabilities (as witness further maintains) on precisely the same principle as other bankers, *ib.* 3458–3472.

In principle the note is, or ought to be, a legal tender in the Banking Department, *Right Hon. Lord Overstone* 3946–3951. 4150–4153——By established usage the note is now a legal tender in the department, *ib.* 3947. 4150, 4151——Practically it is quite immaterial whether the note be a legal tender in the Banking Department or not, *ib.* 3950, 3951.

In speaking of the Bank of England, witness always means the Banking Department, *Right Hon. Lord Overstone* 3951——There is, strictly, no bullion in the Bank of England, *ib.* 3952. 3960–3964—— The Bank of England, that is, the Banking Department, is only an ordinary banking concern on a large scale, *ib.* 4149.

See also *Accounts. Circulation (Paper Currency). Claim of Depositors and of Note-holders. Deposits (Bank of England). Discretionary Issue. Issue Department. Management and Direction (Bank of England). Reserve of Bullion (Issue Department). Reserve of Notes and Bullion (Banking Department). Separation of Issue and Banking Departments.*

Report, 1857—*continued.*

Banking Operations. Perfect freedom of competition should be established in the business of banking, as effectually distinguished from the functions of coining or of issuing paper tokens, *Right Hon. Lord Overstone* 3648——Practice of bankers to supply to persons in want of capital, even though they may not have tangible security to give, the deposits of the inactive accumulators of capital, *ib.* 3762–3766.

Increasing practice of country bankers to send dormant money to London for investment; such money being in turn supplied in discount to the manufacturing districts, *Chapman* 5097–5101.

Strong objections urged by the commercial community at Glasgow to the restrictions upon banking in the Acts of 1844 and 1845, *App. p.* 359. 361, 362.

See also *Country Banks.*

Barnard & Son (*Bedford*). Memorial of these bankers, suggesting that the time permitted for taking the averages of the circulation be extended from one month to six months, and the year divided into two periods of six months each; and requesting to be put upon the same footing as the Scotch and Irish banks in regard to issue, *App. p.* 351.

Barter. A state of barter is at the bottom of all commercial transactions, money being only a means of carrying on that barter, *Right Hon. Lord Overstone* 3790-3792.

Bassett, Son, & Harris (*Leighton Bussard*). Memorial of these bankers, suggesting that the time permitted for taking the averages of the circulation be extended from one month to six months, and the year divided into two periods of six months each, and requesting to be put upon the same footing as the Scotch and Irish banks in regard to issue, *App. p.* 351.

Bills of Exchange. As regards the variation in the amount of circulation of bank notes and of bills of exchange, witness has investigated the matter, and finds that there is no connexion between the two, but that the bill circulation increases as the rate of discount rises; tabular statement hereon laid before the Committee, *Newmarch* 1426 and *App. p.* 324–327——Reasons for the increase in the circulation of bills of exchange when the rate of discount rises, *Newmarch* 1519–1525.

Absence of similar relation between bills of exchange and the stock of the merchant who draws them, and between bank notes and the bullion which they represent, *Right Hon. Lord Overstone* 3738–3742——Statement as to the expediency of a power at all times to convert undoubted bills of exchange, *Chapman* 5008, 5009. 5176–5179. 5329. 5333, 5338, 5339——Good bills of exchange are the best security for a banker or money-dealer, *ib.* 5106–5108. 5115, 5116. 5197——Dissent from Mr. Leathem's estimate of 200,000,000 *l.* as the amount floating as bills of exchange; estimate of from 100,000,000 *l.* to 120,000,000 *l.* as much nearer the mark, *ib.* 5271–5283.

Account of the average circulation of twenty-one days and seven days bills at the several branches of the Bank of England, in each year from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days and other bills at the several branches of the Bank of England, in each year from 1848 to 1856, both inclusive, *ib.* 25.

Weekly statement of the circulation of seven days and other bills during the year 1847, distinguishing the amount from each branch bank, *App. p.* 28, 29——Similar weekly statement during the year 1856, *ib.* 30, 31.

Return of the several rates at which the Bank has discounted bills of exchange, together with the weekly amount of money discounted under each rate, from the week ending the 1st January 1848 to the week ending the 27th December 1856, both inclusive, *App. p.* 68–81.

Account of the seven day and other bills held by the Banking Department, as published weekly in the "Gazette," since the passing of the Act 7 & 8 Vict. c. 32, from the 31st August 1844 to the 25th December 1847, *App. p.* 94–99——Similar account for each week from the 1st January 1848 to the 27th December 1856, *ib.* 100–113.

Account of the total amount of bills discounted by the Bank, from the last day of each week from the 7th September 1844 to the 24th December 1847, *App. p.* 114–119——Similar account, from the last day of each week from the 1st January 1848 to the 27th December 1856, *ib.* 120–135.

Return of the stamp duty on bills of exchange of each denomination in England, Scotland, Ireland, and the United Kingdom, distinguishing the principal commercial and manufacturing districts in the former country, from 1844 to 1856, *App. p.* 310–323.

Statement of the total amounts in bills of exchange (inland bills) drawn or created in England and Wales, during each quarter of the twenty-four years 1830 to 1853, distinguishing the three groups of small, medium, and large bills, with a collateral column of the rate of interest in London on first-class bills during each quarter, and also of the average circulation in each quarter of the notes of the Bank of England, and of the notes of private and joint-stock banks of England and Wales, *App. p.* 324–326——Explanations by Mr. Newmarch on the foregoing statement, *ib.* 326, 327.

Report, 1857—*continued.*

Birkbeck, Charles, &c. (*Settle*). Memorial from these bankers praying to be put on the same footing as Scotch and Irish banks in regard to the issue of notes, *App. p.* 347.

Birmingham Branch (*Bank of England*). Account of the average circulation of twenty-one days and seven days bills in each year, from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days and other bills in each year, from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year, from 1832 to 1847, both inclusive, *App. p.* 26——Similar account for each year, from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days bills, during the year 1847, *App. p.* 28, 29——Similar statement for the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

Birmingham Chamber of Commerce. Petition of the Chamber of Commerce, Birmingham, with a view to certain alterations in the Act of 1844, *App.* 355.

Blair, Alexander. Letter from Mr. Alexander Blair, manager of the Bank of Scotland, to Sir G. C. Lewis, dated the 25th November 1856, stating that the Act of 1845 has been inoperative as regards the bank, with the exception of the expense of the additional reserve of gold, *App. p.* 328, 329.

Comment in this letter upon the 10th section of the Bank Charter Act of 1844, as having produced an effect extremely unfavourable to the prosperity of Scotland, *App. p.* 328, 329——Comment also upon the limit to the issues by the Bank upon securities, *ib.*——Advantage if the bank held an increased reserve, *ib.*——Unfavourable working of the system of publication of the Bank accounts, *ib.*

Blake, Henry Wollaston. Letter from Mr. Blake to the Governor of the Bank of England, dated the 5th November 1856, in decided approval of the Act of 1844, and recommending, as regards the Acts of 1845, that the issue of notes under 5*l.* be abolished or diminished, and that the Bank of England note be made a legal tender throughout the United Kingdom, *App. p.* 17, 18.

Branch Banks (*Bank of England*). Witness does not contemplate any issuing branches to the Bank of England, if that be the only bank of issue, *Hubbard* 2710, 2714.

Account of the average circulation of twenty-one days and seven days bills in each year from 1832 to 1847, both inclusive; distinguishing the amount from each branch bank, *App. p.* 24——Account of the average circulation of seven days and other bills in each year from 1848 to 1856 both inclusive; distinguishing the amounts from each branch, *ib.* 25.

Accounts of the average circulation of branch bank notes in each year from 1832 to 1847 inclusive, distinguishing the amount from each branch, *App. p.* 26——Similar accounts for each year from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of seven days and other bills during the year 1847; distinguishing the amounts from each branch, *App. p.* 28, 29——Similar weekly statement during the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847; distinguishing the amount from each branch, *App. p.* 32, 33——Similar weekly statement during the year 1856, *ib.* 34, 35.

Monthly statement of the gold coin sent to and received from the branches of the Bank of England, from the 1st January 1848 to the 31st December 1856, *App. p.* 289.

Bristol Branch (*Bank of England*). Account of the average circulation of twenty-one days and seven days bills in each year, from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days and other bills in each year from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year from 1832 to 1847 both inclusive, *App. p.* 26——Similar account for each year from 1848 to 1857, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days bills during the year 1847, *App. p.* 28, 29——Similar statement during the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

British Linen Company. Statement by Mr. T. Corrie, on the part of the British Linen Company Bank, in approval of all the provisions of the Act 8 & 9 Vict. c. 38, and recommending that it be continued unaltered, *App. p.* 330.

Particulars as to the amount of capital, &c., and of the authorised and actual circulation in April 1857, *App. p.* 333.

Bromage, Snead, & Snead (*Chepstow*). Petition of these bankers praying for certain alterations in the Act of 1844, *App. p.* 356, 357.

Building

Report, 1857—*continued.*

Building Trade. Particulars respectively as to the present system and the system 30 or 40 years ago of carrying on buildings in London as regards the financial part of the matter; speculative character of the building trade now-a-days as compared with the moderation and prudence which formerly characrised it, *Capps* 5412–5417. 5431–5439. 5509–5520.

Prejudicial effect of the present currency laws upon legitimate building undertakings; the frequent fluctuations caused by those laws in the value of money render the completion of undertakings very uncertain and hazardous, and are a bar to moderate profits, *Capps* 5418, 5419. 5424, 5425. 5430. 5435–5440. 5466–5468. 5508. 5520–5527—— Witness does not want to secure by legislation to the building trade or any other trade the use of money at a rate not greater than 5 per cent., *ib.* 5425–5429.

Bullion, Purchase of. Profit of from 20,000 *l.* to 40,000 *l.* a year derived by the Bank upon bullion and foreign coin, *Weguelin* 140. 142——The profit of from 20,000 *l.* to 40,000 *l.* a year on bullion and foreign coin is entirely irrespective of the issue of notes, though it comes under the profit of the Issue Department, *ib.* 359, 360——Way in which the profit on bullion accrues, *ib.* 361–363——The Bank buys gold at 77 *s.* 9 *d.* an ounce, and issues sovereigns at 77 *s.* 10½ *d.*, *ib.* 361.

Suggestion that it should not be imperative upon the Bank to purchase all the gold brought into the country; ill effect of their doing so when gold is abundant, *Twells* 4598–4602. 4809.

Recommendation by Mr. Dobree that the Bank be relieved from the obligation of buying all gold bullion, *App p.* 22.

Monthly statement of bullion bought and sold by the Bank of England, distinguishing gold from silver bullion, from the 1st of January 1832 to 31st December 1847, *App.* p. 82–85—— Similar statement for each month from 1st January 1848 to 31st December 1856, *ib.* 86, 87.

Bullion Reserve (Issue Department):

1. *Main Importance of Attention to the State of the Reserve.*
2. *Anxiety of the Public in regard to the Reserve.*
3. *Increased Reserves since* 1844; *how far owing to the Act.*
4. *Proposition for a largely increased Reserve; Objections thereto.*
5. *Particulars as to the Amount of the Reserve at different Periods.*
6. *Other Evidence generally.*

1. *Main Importance of Attention to the State of the Reserve:*

In the management of the Bank the main thing to look to is the proportion of unemployed bullion, *Weguelin* 620–626. 1164, 1165; *Hubbard* 2767——Bank notes not being a legal tender by the Bank, it is essential that the reserve should consist of gold, *Weguelin* 634–641—— Witness decidedly objects to any issue of notes by the Bank of England or any other bank unless there be an ample reserve of gold in the one case, and of Bank of England notes or gold in the other case, wherewith to pay the notes of issue, *ib.* 1331.

Any permanent scheme should be accompanied by some provision for keeping a reserve of bullion sufficient to meet unforeseen contingencies, *Hubbard* 2744——The security of our monetary system depends upon the maintenance of the reserve, *Right Hon. Lord Overstone* 4014.

Any provision for an occasional enlargement of the circulation must still have reference to the bullion, *Chapman* 4905——Essential importance of contracting the currency when the bullion falls; suggestions for a compulsory action hereon, *ib.* 4938. 4978 *et seq.*

Remarks by Mr. Weguelin, in letter of 10th November 1856, upon the expediency under any system of issue of keeping up a certain metallic reserve, *App. p.* 2.

2. *Anxiety of the Public in regard to the Reserve:*

Belief that the public, generally, have not felt anxious as to the state of the reserve, since the Act of 1844, *Weguelin* 35——Any wrong inferences drawn by the public in regard to the diminution of the bullion do not justify any alteration in the Act, *ib.* 61–63——Natural anxiety of money-dealers and the public when they see that the reserve of the Bank is diminishing, *Right Hon. Lord Overstone* 3838–3840; *Chapman* 5302—— The earliest warning should be given to the public of a falling bullion, *Chapman* 4975–4977. 5006. 5014. 5057–5061.

3. *Increased Reserve since* 1844; *how far owing to the Act:*

Favourable working of the Act shown by the fact that the stock of bullion was never less than nine millions and a-half in 1856, whereas in 1825 it was reduced to 1,261,000 *l.*, and in 1839 to 2,406,000 *l.*, *Weguelin* 25–29——With a view to ensuring the convertibility of the note, the Act of 1844 has compelled the Bank to keep a larger amount of bullion than previously; no reserve having formerly been required against the circulation, *ib.* 877, 878. 889, 890——The comparatively large reserves of bullion held by the Bank since 1844 are attributable to discretion in the management, and not to the restric-

Report, 1857—*continued.*

Bullion Reserve (Issue Department)—continued.

3. *Increased Reserve since* 1844; *how far owing to the Act*—continued.

tions in the Act; without the Act there would be the same obligation felt to retain a sufficient reserve of bullion, *Weguelin* 1222–1232.

Opinion that the reserve of gold being greater since 1844 is in consequence of the Act, *Neave* 1224.

The large bullion reserves of the Bank, since 1844, are attributable to the influx of gold from Australia, &c., and not to the operation of the Bank Charter Act, *Newmarch* 1348–1354. 1427–1429. 1508, 1509——Further statement in support of the opinion that the larger reserve of bullion in the Bank at different periods since 1844 is not owing to the Act of that year, *ib.* 1716–1726——Increase on the whole in the reserve of bullion in 1855 and 1856 as compared with 1843 and 1844, *ib.* 1907–1911.

Doubt whether the operation of the Act has caused the larger reserve which the Bank has held since 1844, *Mill* 2022–2026——Causes independently of the Act which may account for the larger reserve since 1844, *ib.* 2023, 2024——Large amount of bullion in the Bank in 1844 before the Act came into operation, *ib.* 2206–2209.

Grounds for concluding that the practical effect of the Act has been largely to increase the reserve of bullion in the Bank, *Hubbard* 2341–2347——Since 1844 it has been almost impracticable to reduce the reserve under 8,000,000 *l.*, *ib.* 2343, 2344——Beneficial operation of the Act in causing a larger reserve, *ib.* 2644. 2682——In limiting the amount of credit issue the Act of 1844 necessarily provides in practice, though not in law, for a reserve of bullion, *ib.* 2728–2732. 2739–2741——Under the Act of 1844 it is almost impossible for the bullion reserve to be reduced to 2,000,000 *l.*, *ib.* 2797.

Belief that the larger bullion reserve of the Bank since 1844 has been mainly owing to the Act of that year, *Norman* 2877–2887——Portion probably due to the gold discoveries and imports, *ib.* 2883–2887.

Effectual protection of the bullion reserve under the operation of the Act, as shown in the drains of 1847 and 1856–7; *Right Hon. Lord Overstone* 3648——Denial that the imports of gold from California and Australia are the cause of the increased reserve, *ib.* —— Explanation of the mode in which the Act necessarily provides against undue reduction in the amount of bullion, *ib.* 3649–3651.

The gold discoveries have largely been the cause of the increased bullion reserve, *Twells* 4591; *Chapman* 5310–5314.

4. *Proposition for a largely increased Reserve; Objections thereto:*

Concurrence in Mr. Tooke's view that the Bank should hold a reserve in bullion of not less than 10,000,000 *l.* or 12,000,000 *l.*, to be determined upon a principle of an average of years, *Newmarch* 1368–1392——An arrangement for a larger average store of bullion as proposed by Mr. Tooke, should involve compensation to the Bank, *ib.* 1369. 1382. 1489——Advantage of an arrangement like the foregoing being settled between the Government and the Bank, and not defined by Act of Parliament, *ib.* 1368. 1378–1392 ——The amount of bullion which witness suggests that the Bank should hold, would form a portion of the assets, and would be a guarantee equally for the deposits and the circulation, *ib.* 1490–1493——The maintenance of a certain amount of bullion in proportion to the total liabilities might be effected by the Bank not reducing its rate of interest below a certain point, such as four per cent.; explanation hereon, *ib.* 1494–1507.

Preference given to Mr. Tooke's proposition for an average reserve of 12,000,000 *l.*, as compared with the existing practice, *Mill* 2012–2019——There should be some understanding as to the reserve of bullion to be held; the sum specified might be from 10,000,000 *l.* to 12,000,000 *l.*, *ib.* 2072. 2075. 2185.

Recommendation by Mr. Blair, manager of the Bank of Scotland, that the Bank should hold an additional reserve of 3,000,000 *l.*, *App. p.* 329.

Inexpediency of a system of compensation to the Bank, with a view to the maintenance of an increased reserve to meet any subsequent pressure, *Weguelin* 265–268.

Arguments opposed to the proposition of Mr. Tooke and Mr. Newmarch, that the Bank should keep an average of about 10,000,000 *l.* or 12,000,000 *l.* in bullion, without a limit upon issue, *Hubbard* 2349–2353——The plan of Mr. Tooke would be very costly and cumbrous, without obtaining any useful object, *ib.* 2349, 2350——Inadequacy of a stipulated amount of reserve as a means sufficient of itself to meet the pressure of 1847, or of the late war, *ib.* 2393–2396.

Witness totally dissents from the doctrine, that if the Bank held a certain large amount of bullion, a drain upon it may be suffered to run its course without doing any mischief, *Norman* 3516–3519.

5. *Particulars as to the Amount of the Reserve at different Periods:*

Return of the lowest amount of bullion in the Bank in the years 1825, 1837, 1839, 1847, and 1856; the lowest amount was 1,261,000 *l.* in 1825, *App. p.* 89.

Account

Report, 1857—*continued.*

Bullion Reserve (*Issue Department*)—continued.

5. *Particulars as to the Amount of the Reserve at different Periods*—continued.

Account of the amount of all bullion held by the Bank on the 28th February and 31st August in each year, from 1778 to 1847 inclusive, *App. p.* 90–92——Similar account for each year from 1848 to 1856, *ib.* 93.

Account of the gold coin and bullion and of the silver bullion of the Issue Department as published weekly in the "Gazette," since the passing of the Act 7 & 8 Vict., c. 32, from 31st August 1844 to 25th December 1847, *App. p.* 94–99——Similar account for each week, from 1st January 1848 to 27th December 1856, *ib.* 100–113.

Account of the total amount of bullion in the Bank on the last day of each week, from 7th September 1844 to 24th December 1847, *App. p.* 114–119——Similar account from the last day of each week, from the 1st January 1848 to 27th December 1856, *ib.* 120–135.

Account of the total amount of bullion held by the Bank of England, from the last day of each week, from the 7th September 1844 to the 27th December 1856, *App. p.* 136–147.

Amount of bullion in the Bank in each month, from September 1833 to April 1857, *App. p.* 148–152.

Total of 10,343,710 *l.* as the bullion in the Bank, on the 28th February 1857, *App. p.* 233.

Table showing the amount of bullion in the Bank of England, the market-rate of discount for good bills of exchange, and the prices of fifteen principal articles of commerce at the beginning of the months of March, June, September and December, from March 1834 to December 1843, *App. p.* 290——Similar account from March 1844 to December 1853, *ib.* 291.

Return of the bullion in the Bank on each Saturday during the drain of 1846–47, and during the period of pressure, from the autumn of 1853 to the summer of 1857, *App. p.* 302–305.

6. *Other Evidence generally*:

As a rule, variations in the bullion depends upon variations in the advances upon securities, *Weguelin* 1125–1128——The whole object of the Act of 1844 would probably be gained if the Bank were required to keep a certain amount of bullion in proportion to its circulation and deposits, *ib.* 1166, 1167.

Disapproval of a certain amount of bullion being specially set aside as a guarantee for the circulation, *Newmarch* 1344–1347——The reserve of the Bank of England stands in a very different position towards the public from what the reserve of a private bank does, *ib.* 1364. 1415. 1440——Government should not interfere with the discretion of the Bank in regard to its reserve, &c., *ib.* 1486–1488. 1541–1547——As a general rule the Bank may be said to be passive in regard to any decrease or increase of the bullion reserve, *ib.* 1497——The notes in the banking department witness always looks upon as constituting the bullion reserve, *ib.* 2004.

Necessity of clearly distinguishing between the issue and Banking Departments in considering the effect of the Act upon the reserve of bullion, *Mill* 2021, 2022. 2026——mischievous operation of the Act in requiring, for the sake of safety, a larger reserve than the Bank has at times held, *ib.* 2022. 2026. 2032–2034. 2292–2297.

But for the provision of the law compelling the Bank to issue upon bullion when the notes are in excess of a certain quantity, the note reserve in the Bank would be altogether an independent quantity, *Hubbard* 2332–2338——It is possible, under the Act of 1844, that there might not be 1 *l.* of bullion in the issue department, *ib.* 2526. 2739. 2760——Causes of fluctuation in the bullion; the cashment of debts due by foreign countries tends to an increase in the bullion, *ib.* 2560–2566——The reserve of the Bank is dependent on the discretion with which the business is conducted, but the bullion in the issue department is not dependent on the same discretion, *ib.* 2682–2685.

In the event of so very improbable a contingency as a reduction of the circulation to 14,475,000 *l.*, the Bank would doubtless still keep a reserve of bullion in order to maintain the convertibility of the note, *Hubbard* 2739–2746——Reference to a suggestion by witness, fourteen years ago, with a view to retaining a sufficient proportion of bullion to the entire currency, under certain contingencies, producing a diminished currency on an enlarged currency, *ib.* 2744.

In the case of a purely metallic currency, and equally in the case of mixed currency, witness would consider the bullion reserve in the Bank as part of the currency on "money" of the country, *Hubbard* 3209–3216.

As regards the reserve of bullion it cannot be said to lie in the Bank of England, but in the Issue Department, which is essentially a department of the State, *Right Hon. Lord Overstone* 3649. 4168, 4169——The bullion in the Issue Department cannot, as

Report, 1857—*continued.*

Bullion Reserve (Issue Department)—continued.

6. *Other Evidence generally*—continued.

well as the notes which represent such bullion, form part of the currency, *Right Hon. Lord Overstone* 3880. 4163-4166——The bullion in the Issue Department represents equally the notes in the hands of the public and of the Banking Department, *ib.* 3945.

See also *Accounts. Circulation. Claim of Depositors and of Noteholders. Convertibility. Deposits (Bank of England). Drains of Bullion and Monetary Pressures. Extension of Issue. Gold. Issue Department. Management and Direction (Bank of England)*, 2. 3. *Rate of Interest. Reserve of Notes and Bullion (Banking Department). Restriction upon Issue*, 1. *Sales of Securities. Separation of Issue and Banking Departments*, 2. 3. *Term of Bills.*

Bullion Reserve (Country Banks of Issue). Return showing the authorised issues of the notes of the private and joint stock banks in England and Wales, and the actual amount issued; also the authorised issues of the banks in Scotland and Ireland, the actual amounts issued, and the amounts of bullion held by the banks respectively, in each week since the passing of the Acts 7 & 8 Vict. c. 32, and 8 & 9 Vict. c. 37 & 38, to the 9th May 1857, *App. p.* 182-203——Account of the aggregate weekly circulation of the notes of banks of issue in Scotland and Ireland, distinguishing those of 5 *l.* and upwards, and those under 5 *l.*, and showing the total amount of bullion held, from the 13th December 1845 to the 9th May 1857, *ib.* 204-213.

C.

Caledonian Banking Company. Particulars as to the amount of capital, &c., and of the authorised and actual circulation in April 1857, *App. p.* 333.

Cancelling of Notes. Advantage of the present system of the Issue and Banking Departments, on account of the immense number of notes daily cancelled at the Bank; check thereby upon forgery or fraud, *Weguelin* 83-87——About 28,000 notes are cancelled daily, *ib.* 84, 85.

Importance of the principle of cancelling those notes in respect of which bullion is taken from the Issue Department, *Right Hon. Lord Overstone* 3930-3934.

Account of the number of Bank of England notes cancelled, and of the average amount held by the public; also of the average number of days each note remained in circulation in the year 1831, and from 1844 to 1856, inclusive, *App. p.* 300, 301.

Capital. Explanation of the term "capital," with reference to its being the means of regulating the rate of interest, *Norman* 3635-3638——Fallacy of confounding money with capital, under which fallacy some commercial men consider they are prejudiced by the Act of 1844, *ib.* 3720, 3721. 3756-3759 —— General indication of the term "capital," *ib.* 3744——Under a high rate of discount the pressure on the merchant lies in the increased difficulty of his getting money as a means of getting capital, *ib.* 3756-3761.

Necessity of capital as distinguished from money, in order to carry on the great commercial transactions of the country, *Chapman* 5315-5320.

See also *Advances of Capital. Money.*

Capital (Bank of England). The Bank has superabundant capital at its command for the proper discharge of all its banking functions, *Right Hon. Lord Overstone* 3812, 3813.

Amount of 14,553,000 *l.* as the proprietors' capital of the Bank of England, as published weekly in the "Gazette," since the passing of the Act 7 & 8 Vict. c. 32, *App. p.* 94-113.

Capps, Edward. (Analysis of his Evidence.)—Has been engaged for the last 30 years in surveying and building, 5410, 5411——Particulars respectively as to the present system and the system 30 or 40 years ago, of carrying on buildings in London, as regards the financial part of the matter; speculative character of the building trade now-a-days as compared with the moderation and prudence which formerly characterised it, 5412-5417. 5431-5439. 5509-5520.

Prejudicial effect of the present currency laws upon legitimate building undertakings; the frequent fluctuations caused by those laws in the value of money render completion of undertakings very uncertain and hazardous, and are a bar to moderate profits, 5418, 5419. 5424, 5425. 5430. 5435-5440. 5466-5468. 5508. 5520-5527.

Unsoundness of the principles of the Acts of 1819 and 1844, that the pound sterling ought to be at all times a fixed and unvarying weight of gold, 5420, 5421. 5441-5445. 5461-5465. 5473-5477——Approval of the proposition for an issue of 20,000,000 *l.* in inconvertible notes in lieu of the issue on securities, 5422. 5456-5460——Improbability of the inconvertible notes being at a discount as compared with the notes issued by the Bank

Report, 1857—*continued.*

Capps, Edward—(Analysis of his Evidence)—*continued.*

Bank on gold; belief, on the other hand, that the former notes might in time be more valuable than gold, 5422, 5423. 5458, 5459. 5474-5485. 5534-5540.

Witness does not want to secure by legislation to the building trade, or any other trade, the use of money at a rate not greater than 5 per cent., 5425-5429——He considers, however, that the fluctuating and high rates of interest for several years past are the result of an Act of Parliament, and might be prevented by an Act of Parliament, 5430. 5469-5472——Unsoundness of the principle of the Act of 1844, that the mixed currency shall fluctuate precisely as a metallic currency, 5442-5445. 5498-5501.

Written statement of the grounds upon which witness considers that the principles of the present monetary system are unsound, 5445——Importance of a legal tender not liable to be exported, 5445. 5451-5453. 5469-5472. 5480, 5481——Argument that under the present system the increased price for commodities, which indirect taxation renders necessary, cannot be obtained for any length of time together, because it leads to the export of gold from the country, 5445-5451.

Defect of the present syetem in not providing for an expansion of the currency, 5445. 5456——Tendency of the system to exclude the poorer classes from a proper share in those improvements and comforts to which their labour so largely contributes, 5445. 5466. 5493-5497——Variation in the value of the legal tender in proportion to the supply and demand, 5454, 5455——Argument that corn or labour rather than gold is the real standard of value, 5461-5465. 5473, 5474——Importance of gold or the measure of value continuing of the same purchasing power, 5473-5481.

As regards the French assignats, they were issued upon no principle at all, because no provision was made for their redemption, 5485——Under a system of inconvertible notes for internal use there would be no difficulty in settling foreign transactions, 5486-5492——Impracticability of carrying on the commerce of this country with a purely metallic currency, 5498——Concurrence in Mr. Chapman's evidence as to the disastrous effect of sudden withdrawals of bullion upon the industry of the country, 5502-5504. 5508——Form in which inconvertible notes might be issued as regards their value to the holders, 5528-5533.

Carlisle and Cumberland Bank. Memorial from this bank, praying to be put on the same footing as Scotch and Irish banks with regard to the issue of notes, *App. p.* 347.

Carlisle City and District Bank. Memorial from this bank, praying to be put on the same footing as Scotch and Irish banks with regard to the issue of notes, *App. p.* 347.

Central Bank of Issue. Opinion that it is of comparatively little consequence whether there is one or several banks of issue, *Mill* 2039. 2047. 2055, 2056——Probable amount of profit to the Bank and to the public if there were but one bank of issue, *ib.* 2047-2056. 2077-2081.

London is the only place where a bank of issue can properly be established, *Hubbard* 2451——Statement that although the desirableness of a single bank of issue for England and Wales applies with minor force to Scotland and Ireland, still witness is in favour of one central bank of issue for the whole kingdom, *ib.* 2497, 2498. 2840, 2841——Process by which a central bank would get its notes into the hands of country banks and of the public, *ib.* 2701-2706. 2709. 2714-2721. 2816-2818——Advantage of a central bank of issue in the uniformity and undoubted convertibility of the whole currency, *ib.* 2707-2710. 2812. 2815.

Question as to there being on the whole greater liability to forgery if all the notes in circulation emanated from a central bank, *Hubbard* 2708, 2709. 2852-2854——A central bank of issue not carrying on ordinary banking operations might be conducted with considerable profit, *ib.* 2713, 2714——The proposition for a central bank of issue involves an arrangement for the satisfaction of existing banks of issue, *ib.* 2812. 2840, 2841.

See also *Forgery. Government Issue.*

Central Bank of Scotland. Particulars as to the amount of capital, &c., and of the authorised and actual circulation in April 1857, *App. p.* 333.

Chapman, David Barclay. (Analysis of his Evidence.)—Managing partner in the firm of Overend and Gurney; has been in the house since 1817; 4832, 4833——It has been his immediate business to watch the proceedings of the money market, and the causes which regulate the rate of discount, 4834, 4835. 4838——The transactions of the house, which mainly consist in discounting commercial paper, are on a very large scale, 4836, 4837.

Evidence to the effect that the market rate of discount is at times influenced by the Bank rate, and that the Bank rate is also at times influenced by the market rate, 4839-4848. 4864-4874——Influence of the Bank with regard to the rate, at periods when the supply of money in the market is so low, as to compel the public to have recourse to the Bank; this is especially the case towards the end of each quarter, before the payment of the dividends, 4840-4844——Effect of a diminished circulation in the hands of the public in giving the Bank a control in regulating the rate, 4844-4848.

Report, 1857—*continued.*

Chapman, David Barclay. (Analysis of his Evidence)—*continued.*

Anything like a panic has the effect of driving the monied interest to the Bank for supplies of money, 4848——Circumstance of there having been an increase in the paper circulation for a few weeks before the payment of the dividends in the first quarter of 1856 and 1857; 4848-4857——Difficulty of comparing the amount respectively of the discount operations of the Bank of England and of all other discount operations, 4858-4862——Practice of witness's house in regard to the rate of discount; attention necessarily paid to the Bank rate, whilst at the same time the state of the market is the chief guide, 4863-4871.

Lower rate charged on the average by witness's house than by the Bank, 4865-4869——Tendency of competition in the market to bring the rate out of doors below the Bank rate, 4866-4871——Necessity of the Bank conforming to the market rate, without being much above it or below it, 4872-4874——Reference to a tabular statement (which witness delivers in), showing the rates of discount charged by witness's house for first-class bills in each month, in each of the years 1824-57, together with the average rate per annum, 4875-4879.

Injurious effect of the usury laws in hampering the money market; money has been decidedly cheaper since the repeal of those laws, 4880-4885——Material effect upon the rate of discount of a demand for money upon Consols or Exchequer bills, 4886-4890——Absence of close relation between a rise in the rate of discount and a fall in the price of funds, 4888-4894.

As regards the present restriction upon the issues of the Bank, the admirable management of the Bank has hitherto prevented any great evil therefrom, 4895, 4896——Considerable and natural anxiety on the part of money-dealers and the public lest the Bank should not have it in their power to supply any needful assistance which might be required, 4896-4920——Natural anxiety in 1847 lest the restrictions of the Act should bring the country into a state of parelysis, 4900. 4908.

Opinion that under certain fences and provisions, some machinery should be provided for occasionally enlarging the circulation in accordance with the legitimate demands of the community, 4901-4907. 4962, 4963——The Act of 1844 has very great merits, but is very defective in its want of provision against withdrawal of the circulation from various causes, 4904. 4907. 4962, 4963——Reference to the small note reserve of the Bank in October 1856, as having tended to cause too sudden a contraction of business by money-dealers and others, 4909-4935. 5000-5005——Statement as to witness's firm not having contracted their operations in October 1856, because of a tacit assurance conveyed to them that if a real pressure came, Government would interpose to afford relief, 4915-4920.

Sense in which it may be said that the note reserve of the Banking Department is dependent upon the bullion in the Issue Department, 4923-4929——A contraction on the part of money dealers, when the bullion reserve and note reserve are low, is a wholesome and beneficial operation, provided it be a gradual contraction, 4930-4937——An increased rate of interest is the only safety-valve when the bullion is diminishing, 4937——Total disapproval of legislating for a permanently low rate, 4938-4940.

Suggestion that the Bank be compelled by law to vary the rate of interest in accordance with the amount of bullion; the rate should be fixed at 5 per cent. when the bullion is at 10,000,000 *l.*, and should rise a half per cent. with every 500,000 *l.* of fall, 4938. 4978-4999.

Practice of witness's house in regard to money held on call, 4941-4948——The joint-stock banks have largely adopted the business of discount houses, so far as relates to the receipt of deposits, or money on call, 4943. 5097. 5210——Effect of the system of giving interest on deposits in depreciating the value of Exchequer bills, 4949, 4950——Considerable effect of railway debentures and railway stock upon the value of Exchequer bills, 4951-4954.

The separation of the Issue and Banking Departments is highly desirable, 4955, 4956——It is highly undesirable to supersede the country issues by Bank of England paper; the Bank have quite enough to do to manage their present issues, 4957-4961——The power of individual capitalists in London to withdraw 1,000,000 *l.* or 200,000,000 *l.* of notes from circulation is not a proper state of things; illustration of the existence of this power, and the object of exercising it, 4963-4968.

The chief and great merit of the Act of 1844 consists in its placing the issue of the circulating medium upon a defined basis, 4969-4972. 5162. 5175——It is extremely important that the Bank should be governed upon public principles, and not with a view to the private aggrandisement of a corporation, 4974-4976——Whether the till of the Banking Department is more or less full of notes, the public should be warned as early as possible of a falling bullion, 4975-4977. 5006. 5014. 5057-5061——Witness does not propose to interfere with the discretion of the Bank in regard to the rate of interest when the bullion is above 10,000,000 *l.*, 4984-4987.

Remarks

Report, 1857—*continued.*

Chapman, David Barclay. (Analysis of his Evidence)—*continued.*

Remarks upon the unusually large amount of notes in the hands of the public during the pressure in October 1856; 5000–5005. 5020–5034——The maintenance of specie payments being the first thing absolutely necessary, it is of essential importance that a contraction of the currency be compulsory when the bullion falls, 5006. 5057. 5067. 5174——The next point contended for by witness is a provision against withdrawn circulation as resulting from panic, war, bad harvests, or hoarding, 5006 *et seq.*

Opinion that the Bank should have it in their power, under any circumstances, to discount first-class commercial bills, and to supply the circulating medium for undoubted securities of a legitimate character, 5008, 5009——Nature of the restrictions and conditions under which it is proposed by witness that the Bank should, under certain circumstances, extend their issues upon securities; the extended issues should be at high rates of interest, and the Bank should have only a limited proportion of the profit, 5009–5014.

Examination to the effect that pressures upon the money market, and advances in the rate of discount, concurrently with a decrease of bullion, are the result of a demand for bullion for foreign transactions; how far a power of extended issue by the Bank would be of use at such a time, 5015–5056——Necessity of money dealers acting with great care when they see that the bullion is diminishing, and that the reserve of notes is small, 5057–5063——Absence of power in the Bank to determine the circulation in the hands of the public, 5064–5066.

Extent to which advances in the rate of discount attract capital from abroad, 5068–5074——Tendency of a lower rate in this country than on the Continent to drive money abroad, 5075–5081——Without reference to the state of things on the Continent, the main thing is to protect ourselves by raising the rate when the bullion decreases, 5082–5086.

Statement to the effect that, when the rate of interest is low, the market rate is a little below the Bank rate, and when it is high, is a little above the Bank rate, 5087–5096——Increasing practice of country bankers to send dormant money to London for investment, such money being, in turn, supplied on discount to the manufacturing districts, 5097–5101.

Strong objections held by witness as a money-dealer to investments in Exchequer bills or other fluctuating property, 5102–5116——Good bills of exchange are the best security for a banker or money-dealer to hold, 5106–5108. 5115, 5116. 5197——Circumstances under which witness's house applied to the Bank for discounts, on three occasions in October 1847; 5107——On the 19th October the Bank required 10 per cent. for advances on bills of exchange *ib.*

Increased field for the employment of capital by bankers since the existence of railway securities, 5117–5121——Increased abstraction of capital from this country for foreign railways, 5122, 5123——Increased demand for capital in the manufacturing districts, 5124, 5125——Way in which as the exports of the country increase the demand upon money market and the amount of discount operations increase also, 5126–5141——Natural consequence of increased demand for capital that the rate of interest is higher, 5142, 5143——A continance of a high rate of interest is an indication of prosperity, 5143–5149.

Doubt as to the cause of our requiring so much bullion notwithstanding our increased exports, 5143–5147——Illustration of the rapid restoration of confidence on the issue of the Government letter of October 1847; 5149——Within two days after the letter came out witness went to the Bank with a view to getting back all the bills sent in just previously; the Bank rate on those bills was reduced from ten to nine per cent. *ib.*

As regards the Scotch banks, they invest largely in the funds, and have always borne a high reputation for credit, 5150–5154——Doubt as to the amount of discounts of witness's house respectively when the rate of interest is high and when it is low; they are very large under the present high rate, 5155–5161.

Under defined restrictions as to the rate of interest at which the Bank might increase its issues in certain emergencies, the extent of the increased issue, and whether the emergencies were such as to justify such issue, should be left to the discretion of the Bank, 5163–5173——Reference to the present monetary system as being highly artificial, 5173——Evidence in support of the proposition that parties holding first class commercial bills, or even Exchequer bills, should always have it in their power to get them discounted at the Bank of England, 5176–5196.

Comparatively limited extent to which the Lombard-street discount houses make advances on the securities of dock warrants or railway debentures, &c., 5198–5205——Disapproval of advances by the discount houses on securities having relation to speculative transactions, 5201–5205——Necessity of the discount houses lending out all their borrowed money, without keeping any reserve beyond a banking balance, 5206–5209——The practice of the London joint stock banks not to re-discount their bills is different from the practice of the discount houses, 5211–5216.

Report, 1857—*continued.*

Chapman, David Barclay. (Analysis of his Evidence)—*continued.*

[Second Examination.] As regards the pressure in October 1847, it was the result mainly of the quantity of money which was required to regulate our exchanges in consequence of the extraordinary import of corn, 5217, 5218——The restriction upon Bank of England issues had the effect of creating many failures in 1847; 5219——But for the issue of the Government letter there would have been an universal convulsion in the country, 5220-5223——If the circulation had not been obtainable, the monetary world might have been driven to a state of barter, or to the creation of a circulating medium for themselves, 5223. 5306-5308.

Any continuous drain of bullion might, under the present system of issues, reduce the currency so low that transactions could not be carried on, 5224-5228——Opinion, that about 19,000,000 *l.* in notes is absolutely necessary to be in the hands of the public, 5225. 5287——The only plan for obviating the evils of a withdrawal of the circulation through panic, &c., is to make some legislative provision for extended issues under special circumstances, 5229, 5230. 5236.

Reference to some conversations between witness and Sir Robert Peel, during the passing of the Act of 1844, at which the latter said, in reply to witness's representations as to the restriction upon issue, "There is always recourse to the Queen in Council," 5231, 5232——Circumstance of Sir Robert Peel having addressed a note to witness in April 1847, saying how glad he was to see that the crisis had passed; there was no similar note after the real crisis in October, 5232-5235.

The apprehension in 1847 lest bank notes should not be obtainable largely added to the actual drain, 5237, 5238——The demand upon the Bank would not have been nearly so great if there existed a provision for extended issue, 5239——Further statement relative to the discounts by the Bank for witness's house in October; exception taken to the exaction of 10 per cent. by the Bank; interview of witness with the governor and deputy-governor on the 5th or 6th October adverted to hereon, 5239-5245——With regard to the management of the Bank in October 1847, the directors did everything in their power for the public, and even went beyond what could have been expected from them, considering the restriction upon their issues, 5244.

Examination with reference to the circumstance of witness's firm having charged only 4½ per cent. for discounting, that is, one-half per cent. below the prescribed rate, during the pressure in November and December 1825; doubt as to any commission having been charged in addition to this rate, 5246-5270. 5348.

Dissent from Mr. Leathem's estimate of 200,000,000 *l.* as the amount floating as bills of exchange; estimate of from 100,000,000 *l.* to 120,000,000 *l.* as much nearer the mark, 5271-5283——Reasonable ground for apprehension of panic when the restricted circulation is contrasted with the immense amounts liable to be called for in prompt payment, 5284-5286. 5294——Great difficulty in obtaining money in October 1856, although the circulation in the hands of the public was unusually high, 5287-5289.

Abundance of money after the anxiety of the public mind in October had passed away; this is always the natural result of the cessation of a panic, 5288-5291——In a time of panic a hoarding of the circulating medium is only natural, 5292, 5293——Any limited amount of circulation is likely to create a panic, 5294, 5295——Definition of the business of witness's house as lying in the employment of the loose banking money of the country, 5296-5299——Deposits, as being payable on demand, are clearly part of the circulation, 5300, 5301.

Natural anxiety of money dealers and the public when they see that the reserve of the Bank is diminishing, 5302——The alarm does not arise from fear of the solvency of the Bank, 5303, 5304——In 1847 India bonds and Exchequer bills were not convertible, but not from any want of confidence in them, 5304, 5305——Danger in October 1856 of a recurrence of the evils of 1847; 5309, 5310——Great and valuable effect of the imports of gold in enabling the country to meet the existing drain of bullion, 5310-5314.

Necessity of capital as distinguished from money in order to carry on the great commercial transactions of this country, 5315-5320——Further statement with reference to the question of discounts being largest when the rate of interest is high, 5322-5326——Further evidence in favour of an extended issue by the Bank in times of special demand of circulation, such issue to be made at increasing rates of interest according as the bullion diminishes, 5327-5344.

Further statement as to the expediency of a power at all times to convert undoubted bills of exchange, 5329. 5333. 5338, 5339——Importance of raising the Bank rate to 10 per cent. when the bullion is at 5,000,000 *l.*, in order to protect payments in specie, 5332. 5340-5342——Scarcity of money at the present time, though there is nearly 20,000,000 *l.* out in notes, 5334, 5335——As regards the management by the Bank of the Government stocks, nothing can be better, 5336——A temporary suspension of specie payments would be a less evil than the distress consequent on a want of the circulating medium, 5338-5340.

Reference

Report, 1857—*continued.*

Chapman, David Barclay. (Analysis of his Evidence)—*continued.*

Reference to the pressure of 1825 as having fallen chiefly on the banking interest, 5345-5348——Different character of the distress in 1847 from that in 1825; in 1847 the panic was more general, and affected more especially the commercial classes, 5349-5355——Further statement as to the expediency of guarding against sudden withdrawals of the circulation by capitalists, or against unjustifiable hoarding, 5356-5359. 5383-5387——Through a want of the circulating medium during a crisis a perfectly solvent person might now be reduced to a condition of bankruptcy, 5360-5364.

The currency is adapted only to the ordinary transactions of the nation, whereas a state of panic calls for an extraordinary supply, 5365, 5366——Way in which the anxious feeling in October 1856, which might easily have been aggravated into a panic, as well as the anxiety in 1847, was attributable to the restriction placed by the Act upon the Bank reserve, 5367-5382——Inexpediency of giving the Bank the right of an additional issue of 2,500,000 *l.* without restricting them in regard to the profits therefrom, 5389-5401——Question whether an addition of 2,500,000 *l.* to the amount issued on securities would result in a *pro tanto* addition to the notes in the hands of the public, 5390-5405.

Further statement as to the Bank having, in the first instance, charged witness's house 10 per cent. for discounting certain bills; the rate was however reduced in a few days to 9 per cent., 5406-5409.

Charter of Incorporation. Opinion of Mr. Thomson Hankey that any Act for the regulation of the paper currency of the country should be of a permanent nature, entirely distinct from the charter of incorporation of any bank, *App. p.* 23.

CIRCULATION (PAPER CURRENCY):

I. *Bank of England:*

1. Term "Circulation" defined.
2. Amount in different Years.
3. Periodical Fluctuations in the Amount.
4. Increased Circulation of smaller Notes, and of Gold and Silver.
5. Decreased Circulation of the larger Notes.
6. Notes of the Branch Banks.
7. Bills of Exchange, Branch Banks.
8. Accounts and Papers laid before the Committee.

II. *Bank of Ireland.*

III. *Country Banks:*

1. Term "Circulation" defined.
2. Amount at different Periods.
3. Papers laid before the Committee.

IV. *Generally:*

1. Aggregate Circulation in 1834, 1844, and 1855.
2. Greater economy of the Circulation of late Years.
3. Fluctuation respectively of a Mixed Circulation and of a Metallic Circulation.
4. Absence of Power in Banks of Issue to affect the aggregate Circulation.
5. Evidence opposed to the foregoing Proposition; Power of Banks to over-issue, and thereby to cause considerable Disaster.
6. Question as to Convertibility being a Security against excess of Circulation.

V. *Bills of Exchange.*

I. *Bank of England:*

1. Term "Circulation" defined:

The notes in reserve, representing the bullion upon which they are issued, are liable to diminution or increase, and are not included in the term "circulation," *Weguelin* 1105, 1106. 1111-1114——Witness considers that the notes in reserve are as much issue as though they were in the hands of the public, *Neave* 1106-1110——By "circulation," witness means those notes actually in the hands of the public, *Newmarch* 2000-2003——Explanation of the term "circulation," as before the Act of 1844, *Norman* 3095-3098.

Active circulation of the Bank adverted to as including in it the reserve of the Bank, *Right Hon. Lord Overstone* 3826-3834——The term "circulation" comprises not only the notes and coin in the hands of the public, but the precious metals and notes in the Banking Department, *ib.* 3879-3891——The bullion in the Issue Department cannot be considered part of the currency, *ib.* 3880. 4163-4166——Circumstances under which uncoined bullion, whether in the hands of the Bank or of private individuals, may be said

Report, 1857—*continued.*

Circulation (Paper Currency)—continued.

I. *Bank of England*—continued.

1. Term "Circulation" defined—*continued.*

to form part of the circulation, or money of the country, *Right Hon. Lord Overstone* 3881-3889——The notes in the Banking Department form a vital part of the circulation, *ib.* 3890, 3891. 3900——Comments on the inaccuracy of an assumption by Mr. Wilson (*Q.* 3929) that witness considers "bullion in the Bank of England to be part of the currency of the country," *ib.* 4163-4169.

2. Amount in different Years:

Average active circulation of the Bank of England in each of the last four years, *Weguelin* 530, 531——In 1856 the average was 19,648,000*l.* *ib.* 531——The lowest amount of active circulation since the Act of 1844 was 16,736,000*l.*, on the 30th December 1848; this is exclusive of bank post bills, and inclusive of notes lost since 1836 or 1837, *ib.* 586-591——The large denominations of notes are principally held by bankers, *ib.* 671——The larger portion of the notes in circulation are held by the public, irrespective of the banks, *ib.* 672——The circulation of the Bank is about one-half of the whole circulation of the country, *ib.* 891.

Slight alteration in the aggregate circulation during the speculation of 1836 and 1837, *Weguelin* 1045-1058——Considerable diminution in the bullion between September 1846 and the autumn of 1847, and corresponding increase in the securities held by the Bank, whilst during the same time there was no material change in the amount of circulation, *ib.* 1077-1106——Great fluctuation in the reserve of notes in the Banking Department in 1847 and 1848, and corresponding fluctuation in the bullion without any effect upon the active circulation, *ib.* 1111-1121.

Causes of the larger amount of circulation in 1852 and 1853 than in the subsequent years, *Hubbard* 2747-2758——Impression that since 1844 notes in the hands of the public have diminished during adverse exchanges; reference hereon to a certain return showing a contrary result, *Norman* 3205-3208.

Particulars relative to, and comment upon, the excess of circulation at different periods between 1783 and 1844, *Right Hon. Lord Overstone* 4173-4188.

Very slight increase of the circulation of the Bank for some years after 1797, *Twells* 4439——Circumstance of there having been an increase in the paper circulation for a few weeks before the payment of the dividends in the first quarter of 1856 and 1857, *Chapman* 4848-4857——Remarks on the unusually large amount of notes in the hands of the public during the pressure of 1856, *ib.* 5000-5005. 5020-5034.

3. Periodical Fluctuations in the Amount:

Considerable fluctuation quarterly in the active circulation, and in the reserve of the Bank; cause thereof, *Weguelin* 38-40——Increased circulation generally in the autumn, after the harvest, *ib.* 41-44——At the time of the payment of the dividends and salaries, the notes in the hands of the public amount to about two and a half millions more than at the lowest period of the quarter; particulars hereon, *ib.* 673-678——Since 1844, as well as previously, the circulation of notes has fluctuated in the same way as the bullion in the Bank, *ib.* 758-761.

Regularity of the variation in the circulation in ordinary times, *Newmarch* 1650, 1651.

Statement by Mr. Weguelin in explanation of the oscillation of the internal circulation, *App. p.* 2.

4. Increased Circulation of smaller Notes, and of Gold and Silver:

Increase in the amount respectively of 5*l.* notes and 10*l.* notes in circulation since 1851, *Weguelin* 46-50——Causes of the increase in the circulation of the 5*l.* note and the sovereign, *Weguelin* and *Neave* 52, 53——The circulation of silver and copper, as well as of notes and gold, has doubtless much increased, *Weguelin* 55——Larger quantity of gold and silver employed since 1853, *ib.* 1325-1329——Increase of 2,000,000*l.* in the circulation of 5*l.* and 10*l.* notes, *Hubbard* 2593.

5. Decreased Circulation of the larger Notes:

Diminution during recent years in the circulation of notes above 20*l.*, more especially in the notes from 200*l.* upwards; causes thereof, *Weguelin* 96-103. 1325-1329——Explanation as to there having been a decrease within the last five years to the extent of 2,000,000*l.* in the circulation of the larger denomination of Bank notes, and an equal increase in the circulation of notes of 5*l.* and 10*l.*, *Hubbard* 2593.

6. Notes of the Branch Banks:

Account of the average circulation of branch bank notes in each year from 1832 to 1847, both inclusive, distinguishing the amount from each branch bank, *App. p.* 26——Similar account for each year from 1848 to 1856, *ib.* 27.

Weekly

Report, 1857—*continued.*

Circulation (Paper Currency)—continued.

I. *Bank of England*—continued.

6. Notes of the Branch Banks—*continued.*

Weekly statement of the circulation of branch bank notes during the year 1847, distinguishing the amount from each branch bank, *App. p.* 32, 33——Similar weekly statement during the year 1856, *ib.* 34, 35.

The increase in the country circulation, between 1851 and 1854, amounted to 1,000,000 *l.*, or about one-sixth; this increase was accompanied by an increase in the consumption of notes of all denominations; at the branches, of about one-fourth; increase respectively in the smaller and larger denomination of notes, *App. p.* 292.

7. Bills of Exchange, Branch Banks:

Account of the average circulation of twenty-one days' and seven days' bills, at the several branches of the Bank of England, in each year from 1832 to 1847, *App. p.* 24—— Similar account for each year from 1848 to 1856, both inclusive, *ib.* 25.

Weekly statement of the circulation of seven days' and other bills, during the year 1847; distinguishing the amount from each branch bank, *App. p.* 28, 29——Similar weekly statement during the year 1856, *ib.* 30, 31.

8. Accounts and Papers laid before the Committee:

Account of the amount of the circulation of the Bank on the 28th February and the 31st August, in each year from 1778 to 1847, inclusive, *App. p.* 90–92—— Similar account for each year from 1848 to 1856, *ib.* 93.

Account of the notes of the Bank of England, as published weekly in the "Gazette," since the passing of the Act 7 & 8 Vict. c. 32, from 31st August 1844 to 25th December 1847, *App. p.* 94–99——Similar account for each week from 1st January 1848 to 27th December 1856, *ib.* 100–113.

Account of bank notes of the Bank of England held by the public, and of notes held in reserve by the Bank of England, from the last day of each week from the 7th September 1844 to the 24th December 1847, *App. p.* 114–119——Similar account from the last day of each week from the 1st January 1848 to the 27th December 1856, *ib.* 120–135.

Account of bank notes of the Bank of England held by the public, and of bank notes of the Bank of England held in reserve by the Bank, from the last day of each week from the 7th September 1844 to the 27th December 1856, *App. p.* 136–147.

Return of the circulation of the Bank of England, in each month from September 1833 to April 1857, *App. p.* 148–152.

Account of the amount of the notes of the Bank of England in circulation on the 28th February 1857; total of 19,340,290 *l.*, *App. p.* 233.

Account of the number of Bank of England Notes cancelled, and of the average amount held by the public; also of the average number of days each note remained in circulation in the year 1831, and from 1844 to 1856, inclusive, *App. p.* 300, 301.

Calculation, as far as it could be made out, of the average number of days a bank note of each denomination remained in circulation in the years 1792 and 1818, presented to the Houses of Parliament in 1819, and here inserted for comparison with the foregoing, *App. p.* 301.

II. *Bank of Ireland:*

Return of the circulation of the Bank of Ireland in each month, from September 1833 to April 1857, *App. p.* 148–152.

III. *Country Banks:*

1. Term "Circulation" defined:

By the circulation of a country bank, witness means the amount of notes in the hands of the public, *Weguelin* 707–711——As a matter of principle, the unissued notes of country banks must be looked upon as part of the circulation, *Right Hon. Lord Overstone* 3973–3975.

2. Amount at different Periods:

Probability of the circulation of country banks having decreased between 1819 and 1842, *Weguelin* 1039–1044——Remarks on the circumstance of there having been a decrease of about 1,000,000 *l.* in the circulation of the Bank of England in 1836, and a corresponding increase in circulation of other banks, *Neave* 1058–1076——Circumstance of there having been an increase of nearly 3,000,000 *l.* in the country bank circulation between 1833 and 1836, *Weguelin* 1308–1311.

Average note circulation of Scotland and Ireland in different years since 1844; increase in the notes of small denomination, *Mewmarch* 1752–1760——Circumstance of there having been a considerable increase in the country circulation in the years 1834–36, *ib.* 1805–1818.

Report, 1857—*continued.*

CIRCULATION (PAPER CURRENCY)—continued.

III. *Country Banks*—continued.

3. Papers laid before the Committee:

Return of the circulation of private banks and joint stock banks in England, Ireland and Scotland, in each month, from September 1833 to April 1857, *App. p.* 148–152.

Accounts of the aggregate daily circulation of banks of issue in England and Wales from the 15th of October 1844 to the 9th May 1857, *App. p.* 153–181.

Return showing the authorized issues of the notes of the private and joint stock banks in England and Wales, and the actual amount issued; also the authorized issues of the banks in Scotland and Ireland, the actual amounts issued, and the amounts of bullion held by these banks respectively, in each week since the passing of the Acts of the 7 & 8 Vict. c. 32, and 8 & 9 Vict. c. 37 and 38, to the 9th May 1857, *App. p.* 182–203.

Account of the aggregate weekly circulation of the notes of banks of issue in Scotland and Ireland, distinguishing those of 5 *l.* and upwards, and those under 5 *l.*, and showing the total amount in Scotland and Ireland respectively, with the amount of bullion held from the 13th December 1845 to the 9th May 1857, *App. p.* 204–213.

Account of the aggregate weekly circulation of bank notes in the United Kingdom, distinguishing those of the Bank of England in the hands of the public, and the issues of other banks in England, Scotland and Ireland, from the 19th October 1844 to 1857, *App. p.* 214–232.

IV. *Generally:*

1. Aggregate Circulation in 1834, 1844 and 1855:

The total note circulation of the United Kingdom in 1834, was 37,500,000 *l.*; in 1844, 38,340,000 *l.*; and in 1855, 39,000,000 *l.*, *Newmarch* 1741–1745.

2. Greater Economy of the Circulation of late Years:

Considerable economy of the circulation in consequence of increased banking facilities, *Weguelin* 966. 985——In 1831 a 5 *l.* note remained in circulation for 115 days, and now it remains only 70 days, *ib.* 985——Economising expedients adopted since 1851 which have tended to reduce the circulation, *Hubbard* 2593. 2754. 2756——A large rate of interest may have some effect in causing people to economise their currency, *ib.* 2657. 2661, 2662. 2755–2757.

3. Fluctuation respectively of a Mixed Circulation and of a Metallic Circulation:

So long as the note is convertible, the paper circulation must fluctuate in the same way that a metallic circulation would fluctuate, *Weguelin* 766–770——During the speculation of 1845 the fluctuations in banking matters were just the same as if the circulation had been purely metallic, *Newmarch* 1605–1612——The present mixed circulation acts in just the same way as a metallic circulation, *ib.* 1964. 1986.

The effect of the Act as causing the circulation to fluctuate like a purely metallic circulation is not of any importance, *Mill* 2293, 2294——A convertible and unrestricted paper currency of the permanent value of a metallic currency would not be liable to the same fluctuation as the latter, and would admit of greater accommodation to the public, *ib.* 2295–2298. 2302, 2303.

The variation in circulation would be just the same if the currency were purely metallic, *Hubbard* 2654.

After the experience of 1837 and 1839, as well as of 1825, witness cannot conceive how it can be maintained that a mixed circulation of gold and convertible notes must necessarily vary in the same way as a purely metallic circulation, *Norman* 3431–3435. 3495–3514.

Effectual security under the Acts of 1844, that the paper circulation shall at all times conform to what would be the amount of a metallic circulation, *Right Hon. Lord Overstone* 3648——Bank notes, including those in the Bank of England, should fluctuate exactly as the bullion fluctuates, *ib.* 3899, 3900——Necessity of the quantity of notes with the public varying in relation to the metallic currency, on account of the cancelling of those notes, in respect of which bullion is taken from the issue department, *ib.* 3930–3934——Refutation of the doctrine that a mixed currency of paper and gold must of necessity vary as a metallic currency would vary, *ib.* 4188.

Unsoundness of the principle of the Act of 1844, that the mixed currency shall fluctuate precisely as a metallic currency, *Capps* 5442–5445. 5498–5501.

Reference by the Birmingham Chamber of Commerce to the greater and more frequent fluctuations in the amount of the circulation and the value of money since the passing of the Act, *App. p.* 355.

4. Absence

Report, 1857—*continued.*

Circulation (Paper Currency)—continued.

IV. *Generally*—continued.

4. Absence of Power in Banks of Issue to affect the Aggregate Circulation:

Evidence to the effect that the country issuers cannot at their will either increase or decrease the active circulation, *Weguelin* 712-746——Absence of any material increase in the circulation, in consequence of the establishment of joint stock banks in 1831 and following years, *ib.* 719-729——The Bank of England has no means of materially contracting its circulation, *ib.* 746, 747. 757-770——Practically it appears that country banks cannot, any more than the Bank of England, increase their issues or circulation at their own will, *ib.* 955, *et seq.*

Further evidence in corroboration of the argument that expansion or contraction of trade, has little if any effect upon the circulation of the Bank of England, *Weguelin* 959 *et seq.* 995, 996. 1011 *et seq.*——Except under peculiar circumstances and to a limited extent, witness further states that the Bank cannot extend its issues, *ib.* 1301-1308. 1312.

Absence of any power in the Bank of England to determine the amount of the outstanding circulation, *Newmarch* 1342. 1409, 1410——Absence of power in country bankers to extend their issues, *ib.* 1408, 1409. 1513.

Further evidence to the effect that neither the Bank of England nor country banks have power to increase their circulation, *Newmarch* 1593 *et seq.* 1690-1694. 1819 *et seq.* 1964——A competition between local banks of issue tends to diminish rather than increase the circulation, *ib.* 1613-1615——It is a delusion to suppose that the Bank could increase and make use of any quantity of notes, and thereby relieve the public, *ib.* 1688-1694.

Great difficulty of affecting the amount of notes in the hands of the public, *Hubbard* 2358——Save under exceptional circumstances neither the Bank of England nor any other bank has power to increase its circulation, *ib.* 2407-2413——By setting on foot new speculations, a banker may for a time increase the circulation, *ib.* 2410-2413——Power of the Bank by the sale of securities slightly to contract the circulation, *ib.* 2596-2606——Tendency of large advances on the part of the Bank temporarily to increase the active circulation to a limited extent, *ib.* 2607-2614——Fluctuations in the circulation are determined by the requirements of trade and not by the will of the issuers, *ib.* 2615. 2655-2666.

Evidence to the effect that country issuers cannot affect the entire circulation, though, as rival issuers between themselves, or with the Bank of England, they may cause variation in the quantity of notes which each might keep out, *Hubbard* 2667-2680——The relative proportion of gold to paper may be varied, but the total amount cannot be varied by any enactment, *ib.* 2763, 2764.

Absence of power in the Bank to determine the circulation in the hands of the public, *Chapman* 5064-5066.

5. Evidence opposed to the foregoing Proposition; power of Banks to over-issue, and thereby to cause considerable disaster:

Argument that it is to a certain extent in the power of bankers, by excessive issues of paper, to affect the price of gold, or rather to depreciate the whole currency, *Norman* 2894-2920——Largely increased issues of private banks between 1834 and 1836, *ib.* 2908. 3179-3201——Further statement as to country bankers or issuers having for a time the power of keeping out over-circulation of notes, *ib.* 3008-3012.

Evidence in support of the proposition that there should be no competition as regards issuing banks, on the ground that for a certain time, and under certain circumstances, a mixed currency may be maintained to a greater amount than a metallic currency could be maintained, *Norman* 3115, *et seq.*——By lending at a low rate of interest, the Bank might for a time maintain an increased circulation, *ib.* 3122-3131——Probability of a worse currency if there are competing issuers than if there be only a single issuer, *ib.* 3132.

Further statement as to a mixed convertible currency being depreciated in comparison with the currency of other countries, if such mixed currency be maintained for a time at a higher amount than a purely metallic currency could be maintained, *Norman* 3156-3178. 3291-3303. 3504-3509——Further consideration of the large increase between 1834 and 1836 in the issues of country bankers; large decrease during the same period in the circulation and the bullion of the Bank of England; inference nevertheless as to a power in issuers to maintain a somewhat increased circulation for a certain time, *ib.* 3179-3201. 3286-3291.

Motive of country bankers to increase their issues; check to over-issue if they were obliged to issue Bank of England notes, first giving proper security for them, *Norman* 3304-3317. 3335-3340——Witness further repeats that, at certain times there is power in issuers to maintain an increase or excess of issue for a longer time than could occur under a purely metallic currency, *ib.* 3431-3435. 3495-3514.

Report, 1857—*continued.*

Circulation (Paper Currency)—continued.

IV. *Generally*—continued.

5. Evidence opposed to the foregoing proposition, &c.—*continued.*

As regards unrestricted competition between country banks of issue, such banks would have power, under certain circumstances, of unduly expanding their paper circulation, and might produce very mischievous results, *Right Hon. Lord Overstone* 3688, 3689——Belief as to the power of the Bank of England (if not restricted in issue) to put out any amount of notes it pleases, displacing thereby, and driving out of the country, a corresponding amount of gold; power, in fact, to banish for a time gold from the country, *ib.* 3906-3918——Extent of witness's experience relative to the practice of issuing banks adverted to in connexion with his views as to the power of over-issue, *ib.* 3922-3927.

Argument that every monetary crisis which this country has gone through can be clearly traced to the non-diminution of the paper money or issue as the bullion left the country, *Right Hon. Lord Overstone* 3988, 3989——Evidence, in detail, with reference to the several monetary pressures between 1783 and 1844, showing that the evils which arose were mainly owing to over-issues of paper money, *ib.* 4173-4188——The maintenance of the paper at an undiminished amount whilst there is a drain of bullion, is practically an over-issue, *ib.* 4174. 4195.

Statement with reference to the severe crisis and panic in 1792 and 1793, showing the tendency of banks to over-issue in a period of excitement, and the inevitable and disastrous results which follow from such over-issues, *Right Hon. Lord Overstone*, 4177——The non-convertibility of the note at this period had nothing to do with the power of issuers to put out their notes in accordance with the demand for them, *ib.* 4180——Statement showing that in the year 1800, and following years, there was a considerable excess of issue of paper money, *ib.*

With regard to the great crisis of 1825, witness adduces certain facts as clearly showing that between 1821 and 1825 there was a considerable increase in the circulation of bank notes, of 5*l.* and upwards, *Right Hon. Lord Overstone* 4182, 4183——Allowance to be made in considering the paper circulation respectively in 1821 and 1825, for the suppression of 1*l.* notes, and the substitution of coin, *ib.* 4182——Great reduction in the bullion in the Bank at this period in consequence of the over-issues, *ib.*——In addition to the increased circulation of the Bank of England in 1825, witness cites sundry grounds for the conclusion that the country issues were greatly in excess at that period, *ib.* 4182, 4183——The proposition that the paper issues were less in 1825 than the preceding years rests upon no evidence whatever, and is a most reckless and fallacious assumption, *ib.* 4182, 4183.

Statement showing the undue regulation of the paper issues in the period between 1833 and 1839, there having been a decided over-issue in the years 1837 and 1839, *Right Hon. Lord Overstone* 4184-4187.

Strong inculcation of the proposition that the alternate effect of an over-issue of paper money must be to depreciate the aggregate currency, and to cause an exportation of coin or bullion, *Right Hon. Lord Overstone* 4185-4188.

6. Question as to Convertibility being a Security against excess of Circulation:

The legal convertibility of the note is a sufficient security against over-issue, *Newmarch* 1345; *Mill* 2313-2316——But for the check of the convertibility of the Bank of England note, there would not be so much difficulty in affecting the amount of the circulation, *Newmarch* 1629-1631——Way in which the convertibility of the note controls the issues or rather the advances of the Bank, *ib.* 1823-1850——There should be no restriction upon issue save that of convertibility, *Mill* 2011.

Argument that the principle of competition cannot be applied, without mischief to the issues of paper money; the mere convertibility of the note is not, in fact a sufficient security against over-issue, *Norman* 2894-2920. 3196——The test of convertibility is, however, quite sufficient to prevent any indefinite increase of circulation, *ib.* 3196——The convertibility of the note will not of itself cause the paper circulation to conform to the variations of the metallic circulation, *Right Hon. Lord Overstone* 3874, 3875.

V. *Bills of Exchange:*

Tabular statement by Mr. Newmarch of the total amounts in bills of exchange (inland bills) drawn or created in England and Wales, during each quarter of the twenty-four years, 1830-1853, distinguishing the three groups of small, medium and large bills; with a collateral column of the rate of interest in London on first-class bills during each quarter, and also of the average circulation during each quarter, of the notes of the Bank of England, and of the notes of private and joint stock banks of England and Wales

Report, 1857—*continued.*

Circulation (Paper Currency)—continued.

V. *Bills of Exchange*—continued.

Wales, *App. p.* 324-326——Explanatory remarks by Mr. Newmarch on the foregoing Return, *ib.* 326, 327.

United States.*

City of Glasgow Bank.—This bank represents the very serious disadvantages which, from not being incorporated, it is, by the Act 7 & 8 Vict. c. 113, extended to Scotland in 1846, made to suffer in comparison with the Scotch banks which had obtained charters of incorporation before the passing of such Act; and from not being allowed to obtain incorporation except by subjecting itself to disabilities from which other banks are exempt, *App. p.* 332, 333.

Particulars as to the amount of capital, &c. and of the authorized and actual circulation in April 1857, *App. p.* 333.

Statement on the part of the City of Glasgow Bank in favour of a new average for the circulation of the Scotch banks, *App. p.* 343.

Claims of Depositors and of Note-holders—Propriety of the note-holder having a preference over the depositor in the event of the failure of any bank, *Weguelin* 205-210——Note-holders and depositors have an equal claim upon the Bank of England reserve, *ib.* 630, 631——The depositors and note-holders would equally have a claim on the Issue Department on the event of a stoppage of the Banking Department, *ib.* 785, 786. 811-824——Repetition of opinion that the note-holder should have a greater claim than the depositor upon the effects of the bank, *ib.* 1136, 1137. 1280.

Argument, that under the Act of 1844, the legal claim applies equally to all the assets of the bank whether on the part of the note-holder or the depositor, *Weguelin* 1138, 1139. 1147-1155. 1158.

Dissent from the foregoing evidence; opinion that by the separation of the departments, the depositor can have no claim upon anything lodged in the Issue Department, *Neave* 1139-1147. 1156-1156.

Further expression of the opinion that the Act of 1844 did not affect a legal appropriation of the assets transferred to the Issue Department, to the ultimate payment of the notes, *Weguelin* 1268-1279. 1282, 1283——Absence of prejudice to the depositor by the restrictions of the Act in regard to providing for the notes, *ib.* 1281——As regards the legal question relative to the respective claims of depositors and note-holders, Mr. Freshfield, the late solicitor of the Bank, has given an opinion thereon, which witness considers to be in conformity with his own, *ib.* 1333, 1334.

Intention of the Act of 1844, that in the Issue Department there should be certain securities distinctly set apart for the protection of the note-holders, and also that the bullion should be appointed to meet the notes issued against it, *Hubbard* 2421——Opinion, that the depositors have not directly the same claim in law as the note-holders have upon the bullion in the Issue Department, *ib.* 2524-2527——Reasons why the note-holders are more entitled to security than the depositors, *ib.* 2808-2811.

Wide distinction between the position of a depositor and a note-holder adverted to as an argument against applying legislative action to deposits, *Norman* 2921-2929——Belief as to the Act of 1844, giving to the note-holder a special lien upon the securities and the bullion, *ib.* 3102-3106——The liabilities of a banker in regard to his circulation, should be preserved in a greater degree than in regard to his deposits, *ib.* 3326-3330.

See also *Banking Department. Issue Department*, 4.

Clydesdale Banking Company. Complaint by the Clydesdale Banking Company in regard to the mode in which issues are regulated by the Act 8 & 9 Vict. c. 38, *App. p.* 331.

The Bank represents the very serious disadvantages which, from not being incorporated, it is, by the Act 7 & 8 Vict. c. 113, extended to Scotland in 1846, made to be under in comparison with other Scotch banks, which had obtained charters of incorporation before 1844; and from not being allowed to obtain incorporation, except by subjecting itself to disabilities, from which other banks are exempt, *App. p.* 332, 333.

Particulars as to the amount of capital, &c., and of the authorized and actual circulation in April 1857, *App. p.* 333.

Report, 1857—*continued.*

Coinage of Bullion. Importers of bullion may have it coined for nothing at the Mint; they almost always take it to the Bank instead, pasing 1½*d.* an ounce for getting the coin at once, *Hubbard* 2473–2478——It is some advantage to the public to exchange gold for notes, instead of to take it to the Mint to be coined; the latter course is very rarely adopted, *Norman* 3444–3450——The sole privilege of coining money should be vested in one institution established by law for that exclusive purpose, *Right Hon. Lord Overstone* 3648——Means of computing the proper number of sovereigns to be produced by a certain quantity of gold sent to the Mint to be coined; reference hereon to the produce in sovereigns of 10,000 *l.* worth of gold once sent to the Mint by witness's firm, *Twells* 4686–4706.

Collection of the Revenue. Duty of the Bank to aid in the collection of the revenue, *Weguelin* 144. 155.

Commerce. See *Trade and Commerce.*

Commercial Bank of Scotland. Approval of the Act 8 & 9 Vict. c. 38, on the part of the Commercial Bank of Scotland, *App. p.* 330.

Particulars as to the amount of capital, &c., and of the authorized and actual circulation of the bank in April 1857, *App. p.* 333.

Competition (*Paper Issues*). See *Circulation*, IV. 4, 5, 6. *Country Banks*, IV.

Consolidated Fund. Account showing the advances made on Exchequer bills by the Bank of England, for the quarterly charge of the Consolidated Fund, and the weekly repayments of the same, from the 6th April 1848 to the 7th February 1857, *App. p.* 278–282.

Consols. Decided effect of variations in the rate of interest upon the price of consols, *Hubbard* 2400. 2402–2406.

Return of all purchases and sales of consols made by the Bank of England in each week, from the 21st January 1848 to the 2d May 1857, and the rates of such purchases and sales, *App. p.* 242–277.

Convertibility. Absence of danger since 1844 of the convertibility of the bank note, *Weguelin* 287.

The legal convertibility of the note is a sufficient security against over-issue, *Newmarch* 1345; *Mill* 2313–2316——But for the check of the convertbility of the note, there would not be so much difficulty in affecting the amount of the circulation, *Newmarch* 1629–1631——Absence of any depreciation in a note so long as it is convertible, whilst with inconvertibility depreciation may take place to any extent, *ib.* 1632–1634.

The primary duty of the Bank of England and other banks should be to provide that all their obligations might be payable on demand in the sterling coin of the realm, *Newmarch* 1658–1664. 1851–1854——Way in which the convertibility of the note controls the issues or rather the advances of the Bank, *ib.* 1823–1850.

There should be no restriction upon issue, save that of convertibility, *Mill* 2011——Opinion that the convertibility of the note would be just as safe without the Act, *ib.* 2286, 2287.

It is possible, under the Act of 1844, that there might not be 1 *l.* of bullion in the Issue Department, *Hubbard* 2526. 2739, 2740——Greater security for the convertibility of the note since the Act of 1844, *ib.* 2631–2645——In the event of so very improbable a contingency as a reduction of the circulation to 14,475,000 *l.*, the Bank would doubtless still keep a reserve of bullion in order to maintain the convertibility of the note, *ib.* 2739–2746.

Bankers can by no means increase their issues indefinitely; the test of convertibility is quite sufficient to prevent any such increase, *Norman* 3196——Full security under the Act of 1844 for the convertibility of the notes of the Bank of England, or about one-half of the entire circulation, *ib.* 3318–3321.

There need be no fear of the convertibility of the note, if the issue be limited, with regard either to the external or internal exchanges, *Right Hon. Lord Overstone* 3797——The convertibility of the note will not of itself cause the paper circulation to conform to the variations of the metallic circulation, *ib.* 3874, 3875——For all purposes of internal circulation the paper, so long as it is convertible, must be of identical value with the coin, *ib.* 3876–3878.

Extent to which the Act provides that there shall be gold and silver to meet the notes with the public, *Right Hon. Lord Overstone* 4024–4028. 4220–4222——Assumption that the country could never bear such a diminution of money as would be involved in carrying in the notes for cancellation down to 14,000,000 *l.*, *ib.* 4026——Simple process under which the Act of 1844 provides for convertibility, *ib.* 4112–4118.

Objection to the issue of Bank notes being a legal tender, except in such quantities as may be met by the issuer in gold, *Alexander* 4257–4259, 4270. 4289, 4290. 4312, 4313——Fallacy involved in the Bank notes now bearing upon them a promise to pay on demand,

Convertibility—continued.

demand, there not being the same amount of bullion as of notes, so that, theoretically, convertibility is not provided for, *Twells* 4737-4741——More fair and judicious course if the notes bore an impress that they were issued upon securities, and were made a legal tender, *ib.* 4741, 4742.

See also *Bullion Reserve. Circulation*, IV. 4, 5, 6. *Country Banks*, V. *Metallic Currency. Resumption of Cash Payments.*

Copper. Account of copper coined, and of copper coin received at the Bank of England from the Mint, in each year from 1845 to 1856, *App. p.* 299.

The Bank does not undertake the distribution of copper coin to the public; it is only issued in the payments arising out of the ordinary banking business, principally through the Dividend Pay Office, *App. p.* 299.

Corrie, Thomas. Letter from Mr. Corrie, manager of the British Linen Company Bank, to the Chancellor of the Exchequer, dated 25th November 1856, in approval of all the provisions of the Act 8 & 9 Vict. c. 38, *App. p.* 330.

Cotton, William. Statement by Mr. Cotton, dated the 4th October 1856, in approval of the operation of the Act of 1844, with remarks upon the inconvenience of the circulation of notes under 5 *l.* in Scotland and Ireland, *App. p.* 6–8.

Country Banks:

I. *As to an Extinction of Country Issues:*

1. Gradual Extinction contemplated by the Act of 1844.
2. Failure of the Clause providing for abandoned Issues.
3. Evidence in favour of compulsory Extinction.
4. Evidence to a contrary purport.

II. *Lapsed or relinquished Issues:*

1. Particulars as to the Banks whose Issues have lapsed.
2. Issue by the Bank of England to the extent of Two-thirds of the lapsed Issues.
3. Consideration whether the Bank should not fully replace the lapsed Issues.
4. Petition with reference to the continuance of Compensation.

III. *As to an Increase of Issues:*

1. Objections to a Power of increased Issue on Securities.
2. Statements in favour of a Power of increased Issue.

IV. *Disadvantage of the Monopoly of Issuing Banks.*

V. *Question as to the requirement of Security for Issues.*

VI. *Suggested Extension of the Period for taking the Averages.*

VII. *Improved Operation generally since the Act of* 1844.

VIII. *Returns as to the Circulation in different Years.*

IX. *Banks which have exceeded their authorised Issues, and Fines imposed.*

X. *Banks which have relinquished Business, or have Failed.*

I. *As to an Extinction of Country Issues:*

1. Gradual Extinction contemplated by the Act of 1844:

Belief that the late Sir Robert Peel, and the Government of 1844, contemplated a gradual extinction of the country banks of issue, *Weguelin* 166, 167. 184–188——By the existing law, the issue of country bankers need not terminate, save voluntarily on their own part, *ib.* 168, 169——It was contemplated by Sir Robert Peel, that in ten years from the passing of the Act of 1844, the country circulation would be so diminished, that it would be possible to deal with the remainder by legislative enactment, *ib.* 899. 912, 913. 941–943——It would not be consistent with the intention of the framers of the Act to continue the existing arrangements with regard to country banks, *ib.* 945.

The composition clause of the Act of 1844 was evidently intended as a means of superseding the country bank circulation, *Newmarch* 1399–1402——Contemplation by the promoters of the Act, that the country issues would be voluntarily commuted, *Hubbard* 2429.

Probability of the Act of 1844 having contemplated the gradual absorption of the country issues, *Norman* 2939–2942——Impression further stated that Sir Robert Peel looked forward to a diminution, and probably an ultimate extinction, of the country issues; question put by him to witness on examination before the Select Committee in 1840, adverted to hereon, *ib.* 3331–3334.

Approval of the course taken by Sir Robert Peel with a view to the gradual extinction of the country issues, *Right Hon. Lord Overstone* 3672–3675. 3680.

Report, 1857—*continued.*

Country Banks—continued.

I. *As to an Extinction of Country Issues*—continued.

2. Failure of the Clause providing for abandoned Issues:

The compensation clause in the Act of 1844, by which the Bank is empowered to compound with issuing banks, has not had the anticipated effect of absorbing the country issues, *Weguelin* 899, 900——Further reference to the slight extent to which country issues have come under the compensation clause; reasons for the comparative inoperativeness of this clause, *ib.* 936–938. 944——Causes of the failure of the voluntary clause, *Hubbard*, 2430–2432.

Although the operation of the composition has not hitherto been considerable, witness considers that the country issues are in a fair way of being extinguished, *Right Hon. Lord Overstone* 3676–3678. 3681–3685——Gradual diminution of the country issues further adverted to; circumstance of this having largely resulted from the insolvency of the banks, *ib.* 3981–3985.

3. Evidence in favour of compulsory Extinction:

The way to accomplish uniformity of currency would be to render compulsory the permissive clauses of the Act, upon certain definite terms, *Hubbard* 2439–2441——Doubt as to any inconvenience being felt, after a time, by the withdrawal of the local notes of country banks, *Norman* 3030–3036.

It is extremely desirable, in principle, to absorb the country issues in the issues of the Bank of England, *Right Hon. Lord Overstone* 3672–3680. 3685–3687——It would be better to take further and more decided steps for stopping the country issues altogether, than to permit such issues to be extended on the security of bullion, or to require security even without increased issues, *ib.* 3680. 3687——Witness would approve of any practical measure for the immediate extinction of country issues, *ib.* 4203.

Suggestion by Mr. T. N. Hunt in favour of the gradual discontinuance of all Bank notes issued without the deposit of an equal amount of gold and silver; how this may be effected, *App. p.* 9.

Opinion of Mr. J. G. Hubbard that it would be for the public advantage that the country banks of England and Wales should work exclusively with the notes of the Bank of England, *App. p.* 11. 13.

Recommendation by Mr. B. B. Greene, that provision be made for causing the entire issue of notes in England and Wales to merge into that of the Bank of England, either at once, or by a gradual process, *App. p.* 18, 19.

Proposition by Mr. Hubbard for a withdrawal of the country issues, and for a redemption of the beneficial interest of the issuers, *App. p.* 22.

4. Evidence to a contrary purport:

Objection to a compulsory termination of the issue of country banks, *Weguelin* 170–172——Witness sees no reason why the circulation of country bankers should be extinguished, *Newmarch* 1403. 1533, 1534——Expense to the Bank of England if it replace the circulation of all country banks of issue, *ib.* 1403–1408——Absence of advantage in abolishing country banks of issue in England, *Mill* 2039–2042.

Opinion that the country bank circulation is now in a very satisfactory state, *Twells* 4619——The issues are very small in proportion to the deposits, *ib.* 4619, 4620. 4623——It is highly undesirable to supersede the country issues by Bank of England paper; the Bank have quite enough to do to manage their present issues, *Chapman* 4957–4961.

II. *Lapsed or relinquished Issues:*

1. Particulars as to the Banks whose Issues have lapsed:

Return of any banks, being banks of issue previously to the passing of the Act 7 & 8 Vict. c. 32, which have ceased to issue their own notes, and the amount of the circulation of such banks respectively; showing the amount on which the Governor and Company of the Bank of England founded a memorial, dated the 26th November 1855, and on which permission was granted to them to add to their issue of notes, under the 5th section of the Act 7 & 8 Vict. c. 32, *App. p.* 88, 89.

Account of the number of private banks of issue in England at the time of passing the Act of 1844, and whose issues were fixed by that Act; also the number which still continue in existence as banks of issue, and showing what number have ceased to issue by compounding with the Bank to use Bank of England notes, and the number that have ceased by failing, *App. p.* 238——Similar account in regard to Scotland under the Act of 1845, *ib.*——Similar account in regard to Ireland, *ib.*

2. Issue

Report, 1857—*continued.*

COUNTRY BANKS—continued.

II. *Lapsed or relinquished Issues*—continued.

2. Issue by the Bank of England to the extent of Two-thirds of the lapsed Issues:

The issue, to the extent of two-thirds, was the result of an application made to Government, at the suggestion of the Chancellor of the Exchequer, *Weguelin* 598——Through the failure of several banks of issue since 1844, and the abandonment of issue by several banks, about 800,000 *l.* of notes have been partly replaced by the Bank of England, *ib.* 897, 898. 912——Substitution by Bank of England notes to the extent of two-thirds of the lapsed issue of private banks, further adverted to, *Weguelin* and *Neave* 922–924.

Witness cannot trace any increase in the circulation of the Bank of England notes consequent upon the permission to issue to the extent of two-thirds of the lapsed circulation; the substitution, in fact, has been imperfect, *Weguelin* 925–928——With regard to the increased issue by the Bank of 475,000 *l.*, Government receives two per cent. from the Bank for such issue, *ib.* 1267.

Principle upon which the Act restricted the re-issue to two-thirds of the lapsed issue, *Hubbard* 2356——There has been no direct issue of Bank of England notes in consequence of the lapsed issues of any country banks, *ib.* 2697–2700.

Reference to the application by the Bank to Government to be allowed to issue to the extent of two-thirds of the lapsed country issues; witness was not a party to this application, *Norman* 3592–3598. 3631——Explanation that the application in regard to the issue by the Bank really emanated from the Government, *ib.* 3629–3632.

3. Consideration whether the Bank should not fully replace the lapsed Issues:

The Bank should have been allowed to issue to the full extent of the lapsed issues, instead of only to the extent of two-thirds, *Hubbard* 2354–2357. 2485——The full amount of the lapsed issues, namely 712,500 *l.*, instead of two-thirds, namely 475,000 *l.*, might have been re-issued by the Bank without any infraction of the principle of the Act, *ib.* 2485——Further reference to the propriety of substituting the Bank of England circulation to the full extent of the lapsed country circulation; belief that coin would not, to any appreciable extent, take the place of the lapsed issues, *ib.* 2540–2544. 2693.

Objection to the Bank being permitted to increase their issue to the full extent, instead of to the extent of two-thirds of the lapsed issue of country banks; this, however, is a very unimportant matter, *Norman* 2865–2870——Whether the bank issue to the full, or to the extent of two-thirds of the lapsed issues of country banks, is not a matter of the slightest consequence, *Right Hon. Lord Overstone* 3695. 4126.

Opinion of Mr. Hubbard, that unless the Bank issues on securities to an equal amount in substitution of lapsed or commuted country issues, the aggregate credit issue will be needlessly curtailed, *App. p.* 11–13.

4. Petition with reference to the continuance of Compensation:

Petition of bankers in the south of England with reference to compensation being continued for the relinquishment of issue, *App. p.* 352.

III. *As to an Increase of Issues:*

1. Objections to a Power of increased Issue on Securities:

Disapproval of country banks being allowed to increase their issues upon securities, *Weguelin* 174——Impediments to English country banks issuing upon bullion, if empowered to do so, *ib.* 174–177——Non-objection in principle to a similar power in the English country banks as in the Irish and Scotch banks to issue upon bullion in excess of their fixed circulation, *ib.* 576–585——Contravention of the principle of the Act of 1844 if country banks were allowed to issue to any amount, in proportion as they deposited Government securities, *ib* 954——Doubt as to any advantage if the English country banks were put upon the same footing as the Scotch and Irish banks, and enabled to issue upon gold in excess of their limited circulation, *ib.* 997–1007.

An allowance to English country banks to issue notes against bullion in excess of their limit of circulation would simply be to give them an extension of issue, without their keeping any additional bullion reserve, *Hubbard* 2481–2484——Witness does not recommend that English country banks should be allowed to over-issue against bullion, but he sees no reason for making a distinction between them and the Scotch and Irish banks, *ib.* 2790–2795.

Country banks of issue should remain on their present footing, new banks of issue being prohibited, *Norman* 2945–2952——Objection to any interference with the country banks which should in any way increase their amount of issues, *ib.* 3037–3041——Further disapproval of a power in country banks to issue to any extent, provided they gave security for two-thirds, and issued one-third upon gold, *ib.* 3542–3544.

Advantage in the limit placed by the Act upon the amount of country issues, *Right Hon. Lord Overstone* 3977. 3980, 3981.

Report, 1857—*continued.*

COUNTRY BANKS—continued.

III. *As to an Increase of Issues*—continued.

2. Statements in favour of a Power of increased Issue:

Approval of a removal of the restrictions imposed in 1844 and 1845 upon the circulation of country banks, *Newmarch* 1411-1413——There is in principle no reason why the banks in Scotland and Ireland should not, equally with English banks, be released from the restrictions now imposed upon their circulation, *ib.* 1417. 1517, 1518——Belief that there is no necessity for the present restriction upon country issues, *Mill* 2043——Memorial of the Huddersfield Banking Company and the West Riding Union Bank, praying to be placed on the same footing as Scotch and Irish banks as regards the issue of notes, *App. p.* 348.

Memorial of Sheffield Banking Companies, praying to be put on the same footing as Scotch and Irish banks with regard to the issue of notes, *App, p.* 348. 357, 358.

Memorial of the Gloucestershire Banking Company, requesting to be allowed to issue notes beyond their specified limit for a sum equal to the gold and silver held by them, *App. p.* 349, 350.

Memorial of private banks of issue in the counties of Bedford, Hertford, Buckingham and Essex, requesting to be put upon the same footing as the Scotch and Irish banks in regard to issue, *App. p.* 351.

Petitions of bankers in the counties of Gloucester, Monmouth, York and Derby, praying to be put on the same footing as the Scotch and Irish banks in regard to the issue of their own notes, *App. p.* 356–358.

Petition of bankers in the City of Coventry, praying to be placed on the same footing as the Scotch and Irish banks, *App. p.* 359, 360.

Petition of bankers in the counties of Lincoln and Northampton, praying to be placed on the same footing as the Scotch and Irish banks, *App. p.* 360, 361.

IV. *Disadvantage of the Monopoly of Issuing Banks:*

New country banks, in not having the power of issue, are placed at a disadvantage, as compared with the existing banks of issue, *Weguelin* 173. 180, 181——Extent to which the operation of the Act may be said to have given a monopoly to the private banks of issue in existence in 1844, and to have deprived the public of the advantage of new and improved banks, *ib.* 902–912. 920, 921. 929–935——Monopoly secured by the present Act to existing country banks of issue, *ib.* 986–988.

Tendency to a monopoly of banking business in country towns where banks of issue are established, *Newmarch* 1580–1592——Advantage to the public where there is competition between the local banks, *ib.* 1580–1582.

Doubt as to there being any instance of a bank of circulation and a bank merely of deposits in the same town; banks at Bristol adverted to hereon, *Newmarch* 1586–1590——Means of a country bank of issue for increasing the accommodation to its customers in the event of its having reached the full amount of its limited issue, *ib.* 1858–1865——The issues of country bankers are to a great extent so much capital in their hands, *ib.* 1865–1868.

Doubt whether an issuing bank has any peculiar advantages or facilities in doing ordinary banking business, *Hubbard* 2448–2450——Extent to which the privileges of issuing banks under the Act may have prevented issues being undertaken by a sounder class of banks, or may by failure have inflicted actual loss, which but for the Act would have been avoided, *Norman* 3345–3356.

V. *Question as to the requirement of Security for Issues:*

Advantage if the country banks were required to deposit securities against their authorised issues, *Weguelin* 133. 170. 178, 179. 181–183. 203–213—— Circumstance of the Act of 1844 not having required any security for the convertibility of the notes of the numerous banks of issue then in existence, further than by limiting the amount of the circulation *ib.* 892–896——Further reference to the absence of precaution or security under the Act of 1844 in regard to the circulation of private and joint stock banks, or nearly one-half of the whole circulation of the United Kingdom, *ib.* 914–918. 929. 946–954. 967 *et seq.*——There is no reason why private and joint stock banks of issue should not give security, as well as the Bank of England, *ib.* 946–953——Witness would like to see a portion of the country circulation represented by gold; or Bank of England notes would doubtless fulfil the same object, *ib.* 967–977.

Objections to requiring security from country issuers, *Newmarch*, 1413–1416. 1528–1532——Although securities, if given by country bankers, would consist of investments bearing interest, it would nevertheless be injurious to the banks of circulation to give such securities, *ib.* 1561–1580——Doubt as to there existing any necessity for requiring securities from country banks, *Mill* 2044. 2071, 2072——Way in which the proposition (not advocated by witness) that country banks should deposit public securities against their issues might be carried into practice, *ib.* 2273–2282.

Absence

Report, 1857—*continued.*

COUNTRY BANKS—continued.

V. *Question as to the requirement of Security for Issues*—continued.

Absence of proper security for the payment of country notes, *Hubbard* 2433. 2442——Security for country issues (if they be continued) would be desirable, but would most likely be objected to on the part of the banks, *ib.* 2447——Doubt as to its being any inconvenience to country banks to keep a large amount of securities as against their circulation, *ib.* 2491–2493——Witness does not recommend that country banks should be required to give security for their issues, though in some instances of failure it would have been an advantage, *ib.* 2805–2807. 2812–2814——The giving of security by country banks would be a very complicated and unpalatable process, *ib.* 2812–2814.

Defect of the Act of 1844 in not prescribing that security shall be taken for the country issues, *Norman* 3222–3257——Witness has always held the doctrine that no bank should be allowed to issue without giving security, *ib.* 3325. 3330. 3356, 3357.

Statement with reference to the Act of 1844 not having required security in the case of the country issuers; question as to this having been any defect in the Act, *Right Hon. Lord Overstone* 3680. 3687. 3976–3980. 3983–3986.

Country bank notes not being a legal tender, witness does not recommend that such notes should, as well as Bank of England notes, be issued only on gold, *Alexander* 4309–4313. 4318, 4319——Doubt as to the expediency of requiring country banks of issue to give security for their issues, *Twells* 4619–4623.

Recommendation by Mr. Neave, that all banks of issue should deposit security as the Bank of England does, with permission to compound for their issues, *App. p.* 5.

Suggestions by Mr. Norman, that security be required from all issuing banks, *App. p.* 15.

Suggestions by Mr. Latham, with a view to country issuers lodging securities to the amount of their issues; failing to do so, they should adopt the alternative of compounding with the Bank of England, *App. p.* 17.

Suggestion by Mr. B. B. Greene, that banks of issue should deposit Government securities for the authorized amount of their issues, *App. p.* 19.

Remarks by Mr. Thomson Hankey in disapproval of the issues by country banks without the necessity of any security for the payment of the notes, *App. p.* 23.

VI. *Suggested Extension of the Period for taking the Averages:*

Circumstance of the country bank circulation being always under the authorized amount, in consequence of the mode in which the averages are taken, *Weguelin* 189–191——Impression that it is often a million short of the authorized issue, *ib.* 191——Though the country banks are empowered by law to issue about 8,000,000 *l.*, they are deterred by some of the provisions from issuing more than about 7,000,000 *l.*, *ib.* 706.

Reasonableness of an extension of the time for taking the averages in the case of the returns of country banks, as they do not now venture to the full extent of their limit of circulation, *Hubbard* 2482——Hardship on the country banks in their finding it necessary to keep considerably within their credit limit of circulation through the fear of penalties, *ib.* 2789——Approval of an alteration in the system of taking the averages as regards the country bankers' returns, *ib.* 2789. 2804.

Petition of bankers in the counties of Cumberland, Westmorland and Lancaster issuing their own notes under the provisions of the Act 7 & 8 Vict. c. 32, praying for an extension of the period for taking the average of their circulation, *App. p.* 347. 354.

Petition of bankers in the counties of Cumberland, Westmorland and Lancaster issuing their own notes under the provisions of the Act 7 & 8 Vict. c. 32, praying for an extension of the period for taking the averages, *App. p.* 347. 354.

Petition of Sheffield Banking Companies, praying for an extension of the period for taking the averages, *App. p.* 348. 357, 358.

Memorial of the Gloucestershire Banking Company, submitting that it would be no infringement of the principle of the Act of 1844, yet of great benefit to them and their customers, to take the average half-yearly, instead of monthly, *App. p.* 349, 350.

Memorial of bankers in the county of Derby, praying for certain amendments in the Act of 1844, as regards the time of taking the averages of the circulation, *App. p.* 350.

Memorial of private banks of issue in the counties of Bedford, Hertford, Buckingham and Essex, suggesting that the time permitted for taking the averages of circulation be extended from one month to six months, and the year divided into two periods of six months each, *App. p.* 351.

Petition of private bankers and joint stock banks (issuers of their own notes), in the county of Kent, praying for an extension from four weeks to eight weeks of the period for striking the average circulation, *App. p.* 353, 354.

Petition of bankers in the county of Gloucester, praying for an extension of the period for taking the averages, *App. p.* 356.

Report, 1857—*continued.*

Country Banks—continued.

VI. *Suggested Extension of the Period for taking the Averages*—continued.

Petition of bankers in the county of Monmouth, praying for an extension of the time for taking the averages, *App. p.* 356, 357.

Petition of bankers in the counties of York and Derby, praying for an extension of the period for striking the averages, *App. p.* 356, 357.

Petition of bankers in the city of Coventry, praying for an extension of the period for taking the averages, *App. p.* 359, 360.

Petition of bankers in the counties of Lincoln and Northampton, praying that the period be extended, *App. p.* 360, 361.

VII. *Improved Operation generally since the Act of* 1844 :

Check by the Act upon an abuse of country issues, *Hubbard* 2433——Previously to 1844 the country banks in many instances made imprudent investments of their capital, and extended their issues too far, *ib.* 2434-2437——Belief that under the former Act the natural tendency of country banks of issue was to keep their notes in circulation, and to take less perfect securities for their loans than they would do under the Act of 1844, *ib.* 2778-2784.

Improved action of the country issues since 1844, *Norman* 2943, 2944——The country bankers made a very good bargain by the Act, *ib.* 2952. 3353, 3354—— How far, as regards country issues, the public can be said to have made a good bargain by the Act, *ib.* 3355, 3356——The check upon over-issues by country banks more than counterbalances the disadvantage of their monopoly of issues, *ib.* 3484-3486——Further opinion that the country issues have been conducted more satisfactorily since the Act of 1844, *ib.* 3541.

Advantages of the restrictive character of the Act, *Right Hon. Lord Overstone* 3977. 3980, 3981.

VIII. *Returns as to the Circulation in different Years :*

Return of the circulation of country banks in England and Wales, in each month from September 1833 to April 1857, *App. p.* 148–152.

Account of the aggregate daily circulation of private and joint stock banks of issue in England and Wales, from the 15th October 1844 to the 9th May 1857, *App. p.* 153–181.

Return showing the authorised issues of the notes of the private and joint stock banks in England and Wales, and the actual amount issued; also the authorised issues of the banks in Scotland and Ireland, the actual amount issued, and the amounts of bullion held by these banks respectively in each week since the passing of the Acts of the 7 & 8 Vict. c. 32, and 8 & 9 Vict. c. 37 and 38, to the 9th May 1857, *App. p.* 182–203.

Account of the aggregate weekly circulation of the notes of banks of issue in Scotland and Ireland, distinguishing those of 5*l.* and upwards, and those under 5*l.*, and showing the total amount in Scotland and Ireland respectively, with the amount of bullion held from the 13th December 1845 to the 9th May 1857, *App. p.* 204–213.

Account of the aggregate weekly circulation of bank notes in the United Kingdom, distinguishing those of the Bank of England in the hands of the public, and the issues of other banks in England, Scotland and Ireland, from the 19th October 1844 to the 9th May 1857, *App. p.* 214-232.

IX. *Banks which have exceeded their authorised Issues, and Fines imposed :*

Account of banks that have exceeded their limited issues, and of the fines imposed, since the passing of the Act 7 & 8 Vict. c. 32, to the 9th May 1857, *App. p.* 239.

X. *Banks which hav relinquished Business, or have Failed :*

Return of the number or banks of issue and of non-issue that have been established in England and Wales in each year, from 1819 to the preent time, distinguishing joint stock banks from private banks; of the number which have relinquished business in each year, again distinguishing banks of issue and of non-issue, private banks and joint stock banks, and the number which have relinquished business in consequence of failure and other causes, *App. p.* 234——Similar Return as regards Scotland, *ib.* 235——Similar Return as regards Ireland, *ib.* 237.

Return of banks of issue that have failed since 1844, with particulars as to the dividends paid, *App. p.* 240.

See also *Circulation*, III. IV. *Drains of Bullion and Monetary Pressures. Private Banks. Uniform Currency.*

Court of Directors. See *Management and Direction* 4.

Coventry Banks. Petition of bankers in the city of Coventry, praying for an extension of the period for taking the averages of their circulation, and to be placed on the same footing as Scotch and Irish banks in regard to issues, *App. p.* 359, 360.

Credit. A merchant, before purchasing on the credit of his bills, should always have regard to the proportion between his available capital and his liabilities, *Weguelin* 216–220—— The great operations of credit throughout the country districts are performed by bills of exchange taken out of the banker's portfolio, and endorsed by him, and not by the actual circulation of country notes; advantages of this system, *Newmarch* 1569–1579—— Importance of the clear distinction made by the Act between bank notes as currency and bills of exchange, &c. as representatives of credit, *Hubbard* 2628, 2629——The more distinguished and important feature of the Act is, that it puts a strong limitation to the creation of credit paper, and thereby converts such credit into capital, *ib.* 2629–2643—— Under a drain of bullion it is not the capitalist, but the non-capitalist, who wants to obtain money, *Right Hon. Lord Overstone* 3736–3743. 3760–3766.

Credit Circulation. See *Circulation*, I. *Extension of Issue. Restriction upon Issue*, I.

Crompton, Newton & Co. (*Derby*). Memorial from these bankers, suggesting certain alterations in the Act of 1844, *App. p.* 350.

Cumberland Banks. Memorial of the bankers of Cumberland, &c., praying to be put on the same footing as Scotch and Irish banks with regard to the issue of notes, *App. p.* 347. 354.

Currency. See *Circulation* (*Paper Currency*). *Metallic Currency.*

Currie, James Pattison. Letter from Mr. Currie to the Governor of the Bank of England, dated the 6th October 1856, in strong approval of the Act of 1844, and in general approval of the Acts of 1845, *App. p.* 10.

Customs Duties (*Treasury Drafts*). Usefulness, to a limited extent, of the drafts authorised by the Treasury in 1855 for the payment of Customs duties, with a view to the economy of Bank notes, *Hubbard* 2593–2595.

D.

Deficiency Bills. Account showing the advances made on Exchequer bills by the Bank of England for the quarterly charge of the Consolidated Fund, and the weekly repayments of the same, from the 6th April 1848 to the 7th February 1857, *App. p.* 278–282.

Deposits (*Bank of England*). It would for several reasons be very inexpedient to force upon the Bank the system of interest on, and investment of, deposits, as pursued by the joint stock banks, *Weguelin* 159–161. 243–246——Large reserve of the Bank in proportion as the deposits are large, *ib.* 254, 255. 259——List of the private deposits, *ib.* 415——List of the public deposits, *ib.* 416——It is at least equally important to retain a reserve against the deposits as against the circulation, *ib.* 1159–1163.

Arguments that the circulation and deposits equally constitute the liabilities of the Bank of England, and that it is essential to deal with them as a whole in regard to the amount of reserve to be provided, *Newmarch* 1647 *et seq.* 2005–2009——The deposits of the Bank really require more careful watching and more ample safeguard than the circulation, *ib.* 1670–1672.

Main evil of the Act in providing against drains as though they affected the Issue department only, whereas in truth they act equally on the deposits, *Mill* 2026 *et seq.* ——In a quiescent state of trade, the deposits in the Bank do not vary much in amount, *ib.* 2159, 2160——The deposits, being the bulk of all the deposits in the country waiting for employment, constitute the fund drawn upon when bullion is being exported; question hereon as to the propriety of including in this operation deposits other than those of the London and country bankers, *ib.* 2229–2246——Inattention to the management of the deposits, more especially up to 1847, is one of the more erroneous and injurious consequences of the Act, *ib.* 2283, 2284. 2317, 2318.

The deposits are, comparatively, but slightly affected by variations in the rate of discount, *Hubbard* 2618–2625——The deposits of the Bank vary very little, *Norman* 3476, 3477——Explanation with reference to a return from the Bank, showing that during periods of adverse exchanges and high rates of interest the depositors do not materially reduce their deposits, *ib.* 3476–3482.

Impression that the Bank do not now require persons keeping accounts with them to have more than a nominal balance with them, *Twells* 4824–4830.

Remark by Mr. Weguelin that the Act of 1844 unduly encourages the Bank, as regards the use of its deposits, to compete with private money lenders, *App. p.* 1.

Statement by Mr. Thomson Hankey that the Bank should look to their deposits, and to their deposits alone, as the source from which discounts can be satisfactorily provided, *App. p.* 23.

Account of the amount of all deposits held by the Bank on the 28th February and the 31st August in each year, from 1778 to 1847 inclusive, *App. p.* 90–92——Similar account for each year from 1848 to 1856, *ib.* 93.

Report, 1857—*continued.*

Deposits (*Bank of England*)—continued.

Account of the public and other deposits of the banking department, as published weekly in the "Gazette," since the passing of the Act 7 & 8 Vict. c. 32, from the 31st August 1844 to the 31st December 1847, *App. p.* 94-99——Similar account for each week from the 1st January 1848 to the 27th December 1856, *ib.* 100–113.

Account of the total amount of deposits, including the balances on account of the Exchequer, and the balances on account of the London bankers, from the last day of each week, from the 7th September 1844 to the 24th December 1847, *App. p.* 114-119——Similar account from the last day of each week, from the 1st January 1848 to the 27th December 1856, *ib.* 120–135.

Account of the total amount of public deposits and other deposits held by the Bank from the last day of each week, from the 7th September 1844 to the 27th December 1856, *App. p.* 136–147.

Account of the amount of all deposits held by the Bank on the 28th February 1857, *App. p.* 233.

Return of the deposits of bankers and of the private customers of the bank on each Saturday during the drain of bullion in 1846-47, and during the pressure from the autumn of 1853 to the spring of 1857, *App. p.* 302-305.

See also *Claims of Depositors, and of Noteholders.*

Deposits (*Generally*). The deposits of issuing banks are probably much more profitable than their issues, *Hubbard* 2711, 2712. 2785——As regards a drain upon the deposits of an issuing banker, it may be met by selling securities and recalling loans, as well as by increased issues, *Norman* 3473–3475——There is a constant alteration in the value of all deposits, such deposits being in effect money, and influencing the value of capital; connexion therefore between fluctuations in the rate of interest and in the value of deposits, *Twells* 4513–4535——Deposits, as being payable on demand, are clearly part of the circulation, *Chapman* 5300, 5301.——*See* also *Joint Stock Banks.*

Depreciation (*Paper Currency*). See *Drains of Bullion, and Monetary Pressures,* I. *Over-Issue. United States.*

Derbyshire Banks. Memorial of bankers in the county of Derby, praying for certain amendments in the Act of 1844, as regards the time for taking the averages of the circulation, &c., *App. p.* 350.

Direction (*Bank of England*). See *Management and Direction.*

Discount Houses. Great injury if the Bank were at times, in consequence of its reserve being low, to stop discounting for the discount houses, *Chapman* 5190–5195——Comparatively limited extent to which the Lombard-street discount houses make advances on the security of dock warrants, or railway debentures, *ib.* 5198–5205——Disapproval of advances by the discount houses on securities having relation to speculative transactions, *ib.* 5201–5205——Necessity of the discount houses lending out all their borrowed money without keeping any reserve beyond a banking balance, *ib.* 5206–5209, *ib.*

See also *Overend, Gurney & Co.*

Discount Office (*Bank of England*). Anomalous character of the discount office, that is, the office through which advances are made by the Bank, *Norman* 3527, 3528.

Discounts (*Bank of England*). Restrictions placed by the Bank upon the discount of bills with reference to the state of the reserve, *Weguelin* 31–34——The rate of interest and the amount of discounts go down together, *ib.* 269——In discounting bills, their validity alone is considered, without reference to their effect upon exports or imports of the precious metals, *ib.* 547–550. 554, 555.

Larger amount of the Bank discounts when the rate of interest is high than when it is low, *Mill* 2148; *Hubbard* 2376–2379; *Norman* 2994–2997——Larger accommodation given by the Bank to the public since 1844 than previously, *Hubbard* 2379–2382——Fluctuations in the bullion of the Bank represent very nearly the fluctuations in the discounts held by the Bank, *ib.* 2556–2559.

Table showing the periods and extent of variation in the rate of discount at the Bank, from 1844 to 1856, together with the amount of reserve and the amount under discount at the same period, *Hubbard* 2759, 2760——This table shows the fallacy of the notion that the restriction of banking accommodation to the public is tantamount to a rise in the rate of interest, *ib.* 2759——The fact is, that the Bank discounts or advances are larger as the rate of interest is higher, *ib.* 2759, 2760. 2842–2844.

How far the practice of the Bank of England to show any favour as regards discounts to persons keeping accounts with them, *Twells* 4819-4823.

The Bank should have it in their power under any circumstances to discount first-class commercial bills or Exchequer bills, and to supply the circulating medium for undoubted securities of a legitimate character, *Chapman* 5008, 5009. 5176–5196. 5329. 5333. 5338, 5339——It would be a lamentable thing that a man should stop payment who had in his possession the acceptances of Jones Loyd, or Smith, Payne, or similar undeniable securities,

Report, 1857—*continued.*

Discounts (*Bank of England*)—continued.

securities, *Chapman* 5176, 5177. 5180——Illustration, as shown in the case of witness's house in 1839, of the great importance to the public of the Bank continuing to discount in time of pressure, *ib.* 5195.

Return of the several rates at which the Bank of England has advanced money on loan, with the date at which each such rate has been established, and the period during which it has prevailed, and the amount of money advanced upon each such rate, from the 1st of January 1844 to the 1st of January 1848, *App. p.* 36–43——Similar return for the period from the 8th of January 1848 to the 27th December 1856, *ib.* 44–61.

Return of the highest and lowest rates at which the Bank has advanced money on loan or discount, with the date at which each such rate has been established, and the period during which it has prevailed, and the amount of money advanced under each such rate, from the 1st of January 1844 to the 24th of December 1847, *App. p.* 62–67.

Return of the several rates at which the Bank has discounted bills of exchange, together with the weekly amount of money discounted under each rate, from the week ending 1st January 1848 to the week ending 27th December 1856, both inclusive, *App. p.* 68–81.

Account of the total amount of bills discounted by the Bank of England, from the last day of each week, from the 7th September 1844 to the 24th December 1847, *App. p.* 114–119——Similar account, from the last day of each week, from the 1st January 1848 to the 27th December 1856, *ib.* 120–135.

See also *Advances* (*Bank of England*). *Bills of Exchange.* *Exports.* *Overend, Gurney & Co.* *Rate of Interest.* *Term of Bills.*

Discounts (*Generally*). Doubt whether the advances by discount houses are larger when the rate of discount is high than when it is low, *Hubbard* 2842–2844 ——Difficulty of comparing the amount respectively of the discount operations of the Bank of England, and of all other discount operations, *Chapman* 4858–4862 —— Statement with reference to the question of discounts being largest when the rate of interest is high, *ib.* 5155–5161. 5322–5326.——*See* also *Overend, Gurney & Co.* *Rate of Interest.*

Discretionary Issue:

1. *Evidence in favour of vesting a Discretionary Power in the Bank Direction.*
2. *Objections to an Increase in the Power or Responsibility of the Bank.*

1. *Evidence in favour of vesting a Discretionary Power in the Bank Direction:*

Sound discretion is far wiser than mechanical action as a basis of management, *Newmarch* 1545–1547——The Bank should be placed entirely on the responsibility of its own discretion, *ib.* 1885——As regards the amount of the Bank reserve, it is extremely impolitic to regulate it by Act of Parliament rather than by the discretion of the Bank, *ib.* 1662–1679.

Recommended return to the provisions of the law as it was previously to 1844, with some understanding as to the amount of reserve which the Bank should hold, *Mill* 2072–2075. 2185, 2186——Belief that, from past experience, the Bank would act just as beneficially, in cases of over speculation, if the present law were repealed, *ib.* 2075. 2131. 2194–2201. 2304——Further statement as to the expediency of leaving cases of over-speculation to be dealt with at the discretion of the Bank, *ib.* 2131–2134——The general question of restriction upon issue should be left to the discretion and progressive intelligence of the Bank Direction, without any reference to legislative enactment, *ib.* 2193–2205.

Individually, witness sees no objection to a discretion in the Bank to issue notes, which should not be a legal tender, not against bullion, *Alexander* 4319.

Under defined restrictions as to the rate of interest at which the Bank might increase its issues in certain emergencies, the extent of the increased issue, and whether the emergency were such as to justify such issues, should be left to the discretion of the Bank, *Chapman* 5163–5173.

Recommendation by Mr. Palmer that the discretion and responsibility of issue, beyond a fixed amount, be thrown upon the Bank, *App. p.* 6.

Suggestion by Mr. Masterman that a power of relaxation should be vested in a tribunal consisting of the First Lord of the Treasury, the Chancellor of the Exchequer, the President of the Board of Trade, and the two Chairs of the Bank, *App. p.* 10.

Statement by Mr. F. Wilson in favour of a temporary power of relaxation, *App. p.* 10.

2. *Objections to an Increase in the Power or Responsibility of the Bank:*

Inexpediency of empowering the Bank, by Act of Parliament, to break through the restrictions of the law in time of emergency, *Hubbard* 2384–2386——Strong objection to a power of indefinite issue, as held by the Bank previously to 1844, *ib.* 2632–2643.

Report, 1857—*continued.*

Discretionary Issue—continued.

2. *Objections to an Increase in the Power, &c. of the Bank*—continued.

Witness objects to any relaxation of the Act of 1844 which should throw more discretion and responsibility in the Bank Direction, and considers it very probable that an absolute discretion in the Bank, in regard to issues, would not have resulted in so wise a course as that which is now pursued by the Bank, *Norman* 3538, 3539. 3610-3624.

Universal experience has shown that, with regard to the regulation of paper money, discretionary action cannot be safely trusted, *Right Hon. Lord Overstone*, 3995.

Objections urged by Mr. Weguelin to a power of relaxation of the Act of 1844, *App. p.* 3.

Objections urged by Mr. Neave to a power of relaxation in the Bank Directors, *App. p.* 5.

Remarks by Mr. J. G. Hubbard upon the inexpediency of vesting the Bank Direction with a power of relaxation, *App. p.* 12.

Objection by Mr. Norman to any change in the stringent character of the Act, and to any power of relaxation in the Bank Direction, *App. p.* 15.

Discussion (*Currency System*). Disapproval of detailed discussions upon the monetary system and the banking regulations of the country, *Right Hon. Lord Overstone* 3679. 3703-3705. 4125.

Disapproval by Mr. Cotton of discussions at the present time on the various schemes for regulating the circulating medium, *App. p.* 6.

Deprecation by Mr. Dobree of discussion at the present moment, *App. p.* 21.

Distress. See *Drains of Bullion and Monetary Pressures. Over-Issues. Trade and Commerce.*

Dobree, Bonamy. Letter from Mr. Dobree to the Governor of the Bank of England, dated 5th November 1856, with reference to the Acts of 1844 and 1845, and suggesting, with a view to the prevention of violent fluctuations in the rate of interest, as under the Act of 1844, that the Bank be relieved from the obligation of buying all gold bullion in exchange for notes, at so much per ounce, *App. p.* 21, 22.

Drains of Bullion and Monetary Pressures:

I. *Pressures between the Years* 1783 *and* 1844:

1. Generally: Advantage if the Act of 1844 had been in operation.
2. Pressures in the Years 1783, 1793, 1795, and 1797.
3. Pressure in the Years 1823-25.
4. Pressures between the Years 1833 and 1839.

II. *Pressure in the Years* 1846-47:

1. Character and Extent of the Drain in 1847.
2. Operation of the Bank under the Act of 1844, considered.
3. Operation of the Government Letter of October 1847.

III. *Pressure in the Years* 1851-57:

1. Character and Extent of the existing Drain.
2. Measures of the Bank, under the Act of 1844.

IV. *Generally as to the Practice of the Bank, and the Operation of the Act.*

I. *Pressures between the Years* 1783 *and* 1844:

1. Generally: Advantage if the Act of 1844 had been in operation:

Evidence in detail with reference to the several monetary pressures between 1783 and 1844, showing that the evils which arose on those occasions were mainly owing to over-issues of paper money, and that such evils must have been mitigated or prevented, if the Act of 1844 had been in operation, *Right Hon. Lord Overstone* 4173-4188.

2. Pressures in the Years 1783, 1793, 1795, and 1797:

Statement showing that in 1783 and 1795 a severe exhaustion of the bullion was surmounted, and the adverse exchanges corrected, by a resolute and extraordinary degree of contraction of the circulation; in other words, the principle of the Act of 1844 was applied by anticipation, and was found effectual, *Right Hon. Lord Overstone* 4176—— Particulars relative to the severe crisis and panic in 1792 and 1793; disasters consequent on over-issue, *ib.* 4177——Statement to the effect that, as regards the crisis of 1797, it would have been got over, if the Bank had continued to suppress notes as the gold went out, *ib.* 4178, 4179——Doubt, however, with regard to the pressure of 1797, whether the Suspension Act was not a justifiable measure, *ib.* 4179.

Further

Report, 1857—*continued.*

DRAINS OF BULLION AND MONETARY PRESSURES—continued.

I. *Pressures between the Years* 1783 *and* 1844—continued.

2. Pressures in the Years 1783, 1793, 1795, and 1797—*continued.*

Further reference to the crisis of 1797, and to the possibility of meeting the same by a different action on the part of the Bank, *Right Hon. Lord Overstone*, 4237-4239.

Reference to very severe commercial pressures in 1783, 1793 and 1797, in consequence chiefly of the withdrawal of gold from the country; convertibility at this period of the Bank note, *Twells* 4378-4393——Issue of 5*l.* notes by the Bank for the first time in 1793; this was some relief, *ib.* 4392——Continued pressure from 1795 till 1797, in which year the Bank Restriction Act was passed; great relief and improvement consequent upon this Act, *ib.* 4394-4441——Circumstance of corn having been imported in exchange for commodities at this period, and without the instrumentality of an export of bullion, *ib.* 4407-4419.

3. Pressure in the Years 1823-25:

Remarks on the immense decrease of bullion in the Bank between August 1823 and August 1825, owing to a foreign drain, *Weguelin* 1015-1034——In 1825 the Bank had not power to raise the rate of discount beyond five per cent. as a means of checking the efflux of bullion, *ib.* 1025, 1026——In 1825 the gold went unobserved out of the country, there having been no proper record of the reserve at the time, *Neave* 1034, 1035——Crisis of 1825 adverted to, as having been largely aggravated by the increase of country issues and of the issues of the Bank of England, *Norman* 3373-3381.

Evidence relative to the crisis of 1825, showing that between 1821 and 1825 there was a most mischievous excess of paper issues, *Right Hon. Lord Overstone* 4182, 4183——Great reduction of the bullion in the Bank, in consequence of the over-issues, *ib.* 4182——Argument, that if the Act of 1844 had been in operation in 1824 and 1825 it must have prevented, or largely mitigated the evils which occurred, *ib.*

Reference to the pressure of 1825, as having fallen chiefly on the banking interest *Chapman* 5345-5348.

Return of 1,261,000*l.* as the lowest amount of bullion in the Bank in 1825, *App. p.* 89.

4. Pressures between the Years 1833 and 1839:

Circumstances connected with the drain of 1839, when, notwithstanding a considerable reduction in the circulation, the Bank was obliged to borrow 2,000,000*l.* from the Bank of France, *Mill* 2122-2130. 2141-2147——Reference to the severe foreign drain which ceased in March 1837, and to the large increase of notes in circulation, which preceded and prolonged such drain, *Norman* 3389-3406——Peculiarly severe drain in 1839, preceded and aggravated by a considerable increase of circulation; severe measures necessary on this occasion, *ib.* 3407-3430.

Decided over-issues of paper money in the years 1837 and 1839, *Right Hon. Lord Overstone* 4184-4187——If the provisions of the Act of 1844 had been applied in the period between 1833 and 1839 it would have been impossible that such disasters could have occurred, *ib.* 4184, 4185——Probable aggravation of the state of things in this country, in 1837, by the demand for money in America, *ib.* 4240, 4241.

Return of 3,831,000*l.* as the lowest amount of bullion in the Bank in 1837, *App. p.* 89.

Return of 2,406,000*l.* as the lowest amount of bullion in the Bank in 1839, *App. p.* 89.

II. *Pressure in the Years* 1846-47:

1. Character and Extent of the Drain in 1847:

Consideration of the state of the circulation and reserve at different periods in October and November 1847, and in October and November 1856; the maximum diminution in the reserve in 1847 proceeded from a regular cause, and if understood, would not have so much alarmed the public, *Weguelin* 63-76——Witness is not aware of any house having stopped payment in 1847 which had good bills to offer, *ib.* 221, 222——Negotiable character of Exchequer bills in 1847, though they were doubtless at a great discount, *ib.* 223, 224——Alarm only in October 1847, in regard to the state of the Bank reserve, *ib.* 288, 289.

The pressure of 1847 was caused by the paucity of capital in relation to the demand for it, *Right Hon. Lord Overstone* 3834, 3835.

Depreciation of property to the extent generally of not less than 300,000,000*l.* by the panic and discredit in 1847, *Alexander* 4263-4265——The sale of Exchequer bills in October 1847 was impossible, *Chapman* 5107. 5305——The money required for foreign payments, in consequence of the large import of corn, was the cause of the drain, *ib.*

Report, 1857—*continued.*

Drains of Bullion and Monetary Pressures—continued.

II. *Pressure in the Years* 1846-47—continued.

1. Character and Extent of the Drain in 1847—*continued.*

5217, 5218——Different character of the distress in 1847 from that in 1825: in 1847, the panic was more general, and affected more especially the commercial classes, *Chapman* 5349-5355.

Return of 8,813,000 *l.* as the lowest amount of bullion in the Bank in 1847, *App. p.* 89.

Return of the deposits of bankers, and of the private customers of the Bank; also of the bullion in the Bank, and the minimum rate of discount on each Saturday during the drain of 1846-47, *App. p.* 302. 305.

2. Operation of the Bank under the Act of 1844 considered.

Approval of the rate of interest charged by the Bank in October 1847, *Weguelin* 333, 334——As regards the foreign drain in 1847, in consequence of the bad harvest in 1846, it was out of the power of the Bank to prevent it, *Newmarch* 1703——Consideration of the pressure upon the Bank in 1847, and of the very liberal accommodation then given, *Hubbard* 2380-2382——The Act was thoroughly successful during the pressure of 1847, and Government interference was not at all necessary, *ib.* 2382——Opportunities of the Bank, at the height of the pressure of 1847, for meeting the withdrawal of the deposits of the London bankers, *ib.* 2799-2803.

Examination in regard to the pressure in 1847, and the operation of the Act of 1844 with reference thereto; denial that the restrictions of the Act were otherwise than salutary, or that the panic, and the disastrous effect upon credit, were in any way the result of the provisions of the Act, *Right Hon. Lord Overstone* 3988. 3996-4004. 4061-4095——The non-suspension of specie payments, in the spring of 1847, may be distinctly traced to the provisions of the Act of 1844, *ib.* 3988. 3996-4004. 4061-4063——There is the strongest ground for believing that had blended accounts been in existence in the spring of 1847, specie payments must have been suspended, *ib.* 3988. 3996-4004. 4066-4073.

Further statement with reference to the action of the Bank during the pressure in 1847, showing that the Act of 1844 compelled the adoption of restrictive and wise measures, but that if the restrictions had been adopted at an earlier period of the pressure, much of the evil might have been mitigated, *Right Hon. Lord Overstone* 3996-4010*——Circumstance of a considerable quantity of bullion about to be transmitted from this country to America in 1847, and actually shipped for that purpose, having been retained in the country, in consequence of its increased value through the diminished amount of money, *ib.* 4033-4035——Reference to the check given to the drain in April, as having been the result of the publication of the Bank reserve, *ib.* 4069-4073——A repeal of the Act, instead of the issue of the Government letter, would eventually have been most injurious, *ib.* 4091-4093.

Further reference to the crisis of 1847, to the effect, that notwithstanding the complicated pressure upon the monetary world, the bullion reserve was effectually protected, as it never had been on any previous occasion, *Right Hon. Lord Overstone* 4189.

The pressure in 1847 was the result of the restrictions of the Act of 1844, and of the general and natural apprehension of a scarcity of notes which led to their being hoarded, *Twells* 4726-4732.

In 1847, India bonds and Exchequer bills were not convertible, but not from any want of confidence in them, *Chapman* 5304, 5305.

Remarks by Mr. J. O. Hanson as to the power of the Bank during the crisis in 1847, still to have carried out the Act in its integrity, *App. p.* 19.

3. Operation of the Government Letter of October 1847:

The reserve in October and November 1847, would doubtless have increased without the issue of the Treasury letter of 25th October, *Weguelin* 69-72. 231-234——The letter was not asked for by the Bank, was not acted upon by them, and had no practical effect upon the state of the reserve, *ib.* 225-234——The object of the letter was to remove the undue alarm caused by the low reserve, *ib.* 228-230. 235.

The letter of October was not at all necessary, *Hubbard* 2383——Government interference was by no means essential for the safe working of the Act, *ib.* 2798, 2799.

Reference to the Government letter as having led to an indefinite increase of the Bank reserve, and at once restored confidence, *Right Hon. Lord Overstone* 3833. 3836, 3837——Not a single note left the Bank in consequence of the letter, *ib.* 3833——Importance of the limitation in the letter, that not a note was to go out under 8 per cent., *ib.* 3837——Further remarks relative to the Government letter, and the immediate restoration of confidence thereby, *ib.* 4090-4095——The letter was, in a certain form, a temporary suspension of the Act, *ib.* 4090.

With

Report, 1857—*continued.*

Drains of Bullion and Monetary Pressures—continued.

II. *Pressure in the Years* 1846–47—continued.

3. Operation of the Government Letter of October 1847—*continued.*

With regard to the crisis in October 1847, witness considers that the Bank could not have gone on, and that there would have been a general stoppage of all credit transactions, but for the Government letter, *Alexander* 4261, 4262. 4269, 4270. 4283, 4284—— Inference unfavourable to the Act from the feeling of relief and confidence which followed the issue of the letter, *ib.* 4262. 4268, 4269.

Reference to the Government letter of 25th October, as having at once relieved a pressure which otherwise might have been most disastrous, *Twells* 4725, 4726——Illustration of the rapid restoration of confidence on the issue of the Government letter, *Chapman* 5149——But for the issue of the letter, there would have been an universal convulsion in the country, *ib.* 5220–5223.

III. *Pressure in the Years* 1851–57:

1. Character and Extent of the existing Drain:

Constant demand for bullion for exportation during the last four years, *Weguelin* 12–15 ——Reduction in the years 1851–56 of more than four and a half millions in the stock of bullion in the Bank, *ib.* 13–15. 18——Estimate of 4,891,000 *l.* in gold, and of 36,530,000 *l.* in silver as the exports to the east from Great Britain and the Mediterranean in the years 1851–57, *ib.* 17.

Causes of the great demand for bullion for exportation; reference more especially to the continued export of silver, *Weguelin* 21–24*; *Mills* 2082–2101. 2260–2268; *Alexander* 4334–4344——Effect of the state of our Eastern trade, and of the Indian railways, &c., in drawing treasure from this country, *Newmarch* 1499–1507——With respect to the drain from this country to France, it can only take place in exchange for silver or something else, *ib.* 1704, 1705. 1905, 1906.

Return of 9,530,000 *l.* as the lowest amount of bullion in the Bank in 1856, *App. p.* 89.

Return of the deposits of bankers, and of the private customers of the Bank; also of the bullion in the Bank, and the minimum rate of discount during the period of pressure from the Autumn of 1853 to the Spring of 1857, *App. p.* 302–305.

2. Measures of the Bank under the Act of 1844:

Unusually large reserve at the commencement of the present drain, otherwise restrictive measures would have been enforced earlier, *Weguelin* 254–258. 266, 267——Action of the Bank with a view to the protection of the reserve during the drain of 1855–56, *ib.* 291–297——Question as to the propriety of raising the rate to 5½ per cent. in May 1854; state of the reserve adverted to hereon, *Newmarch* 1431–1434——Salutary operation of the restrictions of the Act during the pressure consequent on the late war, *Hubbard* 2388–2399——But for the Act of 1844, the circulation would have increased at the commencement of the present drain just as it did before the former drains, *Norman* 3435.

With regard to the drain during the last two years, the action of the Bank under the Act of 1844 has been most successful, *Right Hon. Lord Overstone* 3708–3717. 4096. 4189.

Reference to the small note reserve of the Bank in October 1856, as having tended to cause too sudden a contraction of business by money-dealers and others, *Chapman* 4909–4935. 5000–5005——Statement as to witness's firm not having contracted their operations in October 1856, because of a tacit assurance conveyed to them that if a real pressure came, Government would interfere to afford relief, *ib.* 4915–4920——Danger in October 1856, of a recurrence of the evils of 1847, *ib.* 5309, 5310.

IV. *Generally as to the Practice of the Bank, and the Operation of the Act:*

The rate of interest is governed by the state of the reserve, as affected by the demand for bullion, *Weguelin* 32, 33. 236–242. 262. 438–440. 1257, 1258——Less effect of an internal demand than of a foreign demand upon the conduct of the Bank, with regard to precautionary measures, *ib.* 57–60——In the event of the reserve being diminished merely by internal alarm, it would not be prudent to raise the rate of interest, *ib.* 241, 242.

Different views of the directors as to an increased rate of interest, or a restriction upon the term of bills being the best mode of correcting an adverse exchange, *Weguelin* 311–316. 327. 504–510. 1261–1266; *Neave* 327; *Hubbard* 2569. 2574–2577——Any attempt to contract the circulation during an adverse exchange would result in an internal drain, *Weguelin* 762–765.

An adverse foreign exchange may almost always be corrected by the transmission of 3,000,000 *l.* or 4,000,000 *l.* of treasure, *Newmarch* 1373. 1494. 1498–1507——The

Report, 1857—*continued.*

Drains of Bullion and Monetary Pressures—continued.

4. *Generally as to the Practice of the Bank, &c.*—continued.

reserve might be temporarily reduced by a drain to 8,000,000 *l.*, or even lower, without necessarily occasioning any extreme pressure on the money market, *Newmarch* 1373, 1374. 1486——Approval of the principle of raising the rate of interest when the bullion decreases, *ib.* 1434–1437. 1459——Safety in allowing the reserve to go lower when there is an internal drain of bullion than when there is a foreign drain, *ib.* 1699–1701.

A drain now acts doubly, first on the banking reserve, and afterwards on the reserve in the issue department, *Mill* 2026. 2033. 2069. 2102——In the case of foreign drains, it is peculiarly important that the issue department should have full power to assist the banking department, *ib.* 2031. 2073, 2074. 2102–2106——Clear distinction necessary to be drawn between the character and effect of drains, inasmuch as when the drain is temporary or limited, it is not essential or expedient to impose violent restrictions for the protection of the reserve, *ib.* 2073, 2074. 2102–2106——Opportunities of the Bank for distinguishing between different drains and their effects, and regulating their mode of action accordingly, *ib.* 2073–2075. 2106. 2135–2137. 3195–2201.

When a drain arises from over speculation, it should be left to the discretion of the Bank not to re-issue notes that are returned to them, *Mill* 2075. 2104. 2131——When a drain is limited, it should be met by the bullion in reserve, rather than by violent restrictions upon credit, *ib.* 2120, 2121. 2185, 2186——It does not follow that if the Act were not in existence, a foreign drain would have the same effect upon the bullion as it now has, *ib.* 2153–2158—— Foreign drains need not, if limited, be met by a restriction of discounts, such as occurs under the present Act, *ib.* 2307–2310.

Diminution of the bullion in the Bank, whether the drain be for home or foreign purposes, *Hubbard* 2339——Sales of securities, and advances in the rate of discount, are the twofold means for checking an efflux of bullion, *ib.* 2387, 2388——A continued action upon the rate of discount is the best mode of correcting the exchanges, *Hubbard* 2568–2574. 2768–2773; *Norman* 3529——The Act has not in any way aggravated the effect of a drain of bullion, *Hubbard* 2773. 2796.

A large import of gold at certain times would not prevent an equally large, or even larger amount being drawn from the Bank at other times, *Norman* 2886——It was generally held, before the passing of the Act of 1844, that in proportion as bullion was withdrawn from the country, the internal currency should be contracted, *ib.* 3204 —— Probable reason of the difference between the circumstances of the different drains, *ib.* 3483.

Less ultimate mischief in the case of drains which have occurred since the Act of 1844, *Norman* 3513–3515. 3610——Under the self-acting test of the Act of 1844, the contraction commences with the drain, and goes on proportionately with it, *ib.* 3516. 3518. 3610——Examination to the effect that a contraction of the circulation is sufficient, if carried far enough, to restore the equilibrium of the exchanges; state of things during the drain of 1839 adverted to hereon, *ib.* 3551–3567.

At the commencement of a drain, the corrective influence of the Act is at once brought into play, *Right Hon. Lord Overstone* 3650, 3651——During the process of a drain of bullion, there must, of necessity, be some pressure as a means of rectification, but such pressure is decidedly salutary, and the sooner it is resorted to the better, *ib.* 3745. 3782–3786——Ordinarily speaking, the bullion which goes to meet adverse foreign exchanges comes from the reserve in the issue department, *ib.* 3919–3921. 3929, 3930. 3936——Statement in support of the proposition, that as the money of the country undergoes a diminution of amount, its value increases, and that in proportion to such increased value, bullion will flow in from other countries, *ib.* 3937–3943. 4029–4048. 4112–4117.

The same rules which apply to the export of bullion apply to the export of any other commodity, *Right Hon. Lord Overstone* 4137–4146——The export of bullion by any individual is the export of so much of the capital or property of that individual, *ib.* 4138–4142.

Origin of monetary pressures and drains of bullion in the want of a circulating medium of undoubted credit, *Twells* 4536–4538.

Examination to the effect that pressures upon the money-market and advances in the rate of discount, concurrently with a decrease of bullion, are the result of a demand for bullion for foreign transactions; how far a power of extended issue by the Bank would be of use at such a time, *Chapman* 5015–5056——Any continuous drain of bullion might, under the present system of issues, reduce the currency so low that transactions could not be carried on, *ib.* 5224–5228.

Remark by Mr. Weguelin, in letter of 10th November 1856, that the Act of 1844 is imperfect in drawing no distinction between an internal and a foreign drain for bullion, *App.*

Report, 1857—*continued.*

Drains of Bullion and Monetary Pressures—continued.

IV. *Generally as to the Practice of the Bank, &c.*—continued.

App. p. 1, 2——Statement by Mr. Weguelin as to the opposite treatment required, respectively, for a foreign and an internal drain, *ib.*

Duncan, W. J. Letter from Mr. Duncan, manager of the National Bank of Scotland, to Sir G. C. Lewis, dated 29th November 1856, in general approval of the Act 8 & 9 Vict. c. 38, but suggesting that it might be expedient to revise and extend the authorised issues of Scotch banks, *App. p.* 331.

Dundee Banking Company. Particulars as to the amount of capital, &c., and of the authorised and actual circulation in April 1857, *App. p.* 333.

E.

Edinburgh Chamber of Commerce. Petition of the Chamber of Commerce, Edinburgh, praying for certain alterations in the Act of 1844, with a view to an increased issue by the Bank of England upon securities, *App. p.* 351, 352.

Edinburgh and Glasgow Bank. This bank represents the very serious disadvantages which, from not being incorporated, it is by the Act 7 & 8 Vict. c. 113, extended to Scotland in 1846, made to suffer in comparison with other Scotch banks which had obtained charters of incorporation before the passing of such Act; and from not being allowed to obtain incorporation except by subjecting itself to disabilities from which other banks are exempt, *App. p.* 332, 333.

Particulars as to the amount of capital, &c. and of the authorised and actual circulation in April 1857, *App. p.* 333.

Objections on the part of the Edinburgh and Glasgow Bank to the operation of the Act of 1845, as being unequal; and in the case of the unchartered Scotch banks very prejudicial, *App. p.* 338, 339.

Efflux of Bullion. See *Drains of Bullion and Monetary Pressures.*

Employment. Way in which the present monetary system causes less certainty of employment than was formerly the case, *Capps* 5466.

Evans, W. and S. & Co. (Derby). Memorial from these bankers, suggesting certain alterations in the Act of 1844, *App. p.* 350.

Excess of Issue (Bank of England). See *Drains of Bullion and Monetary Pressures*, I. *Over-Issue.*

Excess of Issue (Country Banks). Account of the banks that have exceeded their limited issues, and of the fines imposed, since the passing of the Act of 1844 to the 9th May 1857, *App. p.* 239.

Exchanges. See *Drains of Bullion and Monetary Pressures.*

Exchequer Bills. Decided effect of variations in the rate of interest upon the price of Exchequer bills, *Hubbard* 2400. 2402–2406——Cause of the present comparatively high price of Exchequer bills, *ib.* 2528, 2529——Ordinarily Exchequer bills pay a higher interest than consols, *ib.* 2529.

Improved system of Exchequer bills when payable at three months instead of twelve months, *Twells* 4765–4768.

Effect of the joint-stock bank system of giving interest on deposits in depreciating the value of Exchequer bills, *Chapman* 4949, 4950 —— Considerable effect of railway debentures and railway stock upon the value of Exchequer bills, *ib.* 4951–4954.

Provision should be made so that in times of pressure parties holding Exchequer bills might not find them inconvertible, *Chapman* 5176–5187.

Return of all purchases and sales of public stocks or Exchequer bills severally made by the Bank of England in each week, from the 21st January 1848 to the 2d May 1857, and the rates of such purchases and sales, *App. p.* 242–277.

Exchequer Bills—continued.

Account showing the advances made on Exchequer bills by the Bank for the quarterly charge of the Consolidated Fund, and the weekly repayments of the same from the 6th April 1848 to the 7th February 1857, *App. p.* 278–282.

See also *Drains of Bullion and Monetary Pressures*, II.

Exchequer Bonds. Return of all purchases and sales of Exchequer bonds made by the Bank of England in each week, from the 21st January 1848 to the 2d May 1857, and the rates of such purchases and sales, *App. p.* 242–277.

Exeter Branch (*Bank of England*). Account of the average circulation of twenty-one days' and seven days' bills in each year, from 1832 to 1847, *App. p.* 24——Accounts of the average circulation of seven days' and other bills in each of the years from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year from 1832 to 1847, both inclusive, *App. p.* 26——Similar accounts for each year from 1848 to 1856, *ib.* 27.

Exports. Way in which as the exports of the country increase, the demand upon the money market and the amount of discount operations increase also, *Chapman* 5126–5141——Doubt as to the cause of our requiring so much bullion notwithstanding our increased exports, *ib.* 5143–5147.

Extension of Issue:

I. *Bank of England:*

1. Recommended Extension generally of the Issue upon Securities.
2. Suggestions for an Extension in Periods of Pressure.
3. Objections to any Extension or Alteration of the Amount.

II. *Country Banks:*

1. Statements in favour of a Power of increased Issue on Securities.
2. Objections to any Extension of the present Issues.

I. *Bank of England:*

1. Recommended Extension generally of the Issue upon Securities:

An extension of the credit circulation would be better than no alteration at all, *Newmarch*, 1548–1552——According to the principle of the Act the credit circulation of the Bank should now be increased from 14,000,000*l.* to 16,500,000*l.*, or thereabout, *Mill* 2210–2217.

Inexpediency of giving the Bank the right of an additional issue of 2,500,000*l.* without restricting them in regard to the profits therefrom, *Chapman* 5389–5401——Question whether an addition of 2,500,000*l.* to the amount issued on securities would result in a *pro tanto* addition to the notes in the hands of the public, *ib.* 5390–5405.

Recommendation by Mr. J. Malcomson that the amount issued on securities be raised to 16,000,000*l.*, *App. p.* 20.

Petition of the Chamber of Commerce, Edinburgh, praying for certain alterations in the Act of 1844, with a view to an increased issue by the Bank of England upon securities, *App. p.* 351, 352.

2. Suggestions for an Extension in Periods of Pressure:

During an internal panic a very extended issue of notes would greatly relieve the public, and could not do any harm, *Mill* 2190. 2193——Further evidence in favour of a great extension of issue on occasions of internal drain or panic, *ib.* 2299–2306. 2312.

Opinion that under certain fences and provisions some machinery should be provided for occasionally enlarging the circulation, in accordance with the legitimate demands of the community, *Chapman* 4901–4907. 4962, 4963——A main point contended for by witness is a provision against withdrawn circulation as resulting from panic, war, bad harvests, or hoarding, *ib.* 5006 *et seq.*——Nature of the restrictions and conditions under which it is proposed by witness that the Bank should, under certain circumstances, extend the issues upon securities; the extended issues should be at high rates of interest, and the Bank should have only a limited proportion of the profit, *ib.* 5009–5014.

The only plan for obviating the evils of a withdrawal of the circulation through panic, &c., is to make some legislative provision for extended issues under special circumstances, *Chapman* 5229, 5230. 5236——The demand upon the Bank in 1847 would not have been nearly so great if there existed a provision for extended issue, *ib.* 5239.

Further evidence in favour of an extended issue by the Bank in times of special demand of circulation, such issue to be made at increasing rates of interest, according as the bullion diminishes, *Chapman* 5327–5344.

Defect of the present system in not providing for an expansion of the currency, *Capps* 5445. 5456.

Statement

Report, 1857—*continued.*

EXTENSION OF ISSUE—continued.

I. *Bank of England*—continued.

2. Suggestions for an Extension in Periods of Pressure—*continued.*

Statement by Mr. Wilson in favour of extended issue in times of emergency, *App. p.* 19.

Statement by Mr. Masterman in favour of occasional extension, on proper authority, *App. p.* 10.

Statement by Mr. Blair, manager of the Bank of Scotland, as to the expediency of an occasional extension of the amount issued upon securities, *App. p.* 329.

3. Objections to any Extension or Alteration of the Amount:

An increase of trade is no argument for an increase of the limit of issue upon securities, *Weguelin* 101, 102——Grounds for the conclusion that an extension of the limit to sixteen millions would not add two millions to the active circulation, and is not desirable, *ib.* 104–114——Belief that an extension of the limit would diminish the amount of actual reserve of bullion in the country, *ib.* 105. 112. 114——Further evidence as to the probable effect of an addition of 2,000,000*l.* to the amount issued by the Bank upon securities, *ib.* 192–199.

Evidence opposed to a proposition for issuing upon securities, at a high rate of interest, in proportion as the bullion decreases, *Weguelin* 306–322——Objections to fixing the limit at 16,736,000*l.*, the minimum circulation since 1844, instead of 14,000,000*l. ib.* 592–615.

Except as regards the lapsed issues of country banks, it is not desirable to extend the credit issue of the Bank of England, *Hubbard* 2354–2364——The effect of an addition of 2,000,000*l.* to the credit issue would be that the notes in the hands of the public would not be increased, whilst the bullion reserve of the Bank would be diminished by the amount thus added to the credit circulation, *ib.* 2358–2364——Objection to an extension of the credit issue to 16,000,000*l.*, on the ground of the changes which have occurred in the circulation of different denominations of notes, *ib.* 2690–2694——The result of an extension of issue to 16,000,000*l.* would be that the Issue Department would hold 2,000,000*l.* more of securities and 2,000,000*l.* less of bullion, *ib.* 2695, 2696.

Objection to raising the limit from 14,000,000*l.* to 16,000,000*l.*; the effect would be to diminish *pro tanto* the bullion reserve of the Issue Department, without increasing the quantity of notes in the hands of the public, *Norman* 2871–2876——Examination in further consideration and approval of the credit circulation being still fixed at 14,000,000*l.*, although in point of fact the minimum active circulation of the Bank since the Act of 1844 may not have fallen below 16,500,000*l.*; further argument that an increased issue of 2,000,000*l.* on securities would merely result in there being 2,000,000*l.* less of gold in reserve, *ib.* 3013–3029. 3060–3094.

Advantage to the Bank if empowered to issue 2,000.000*l.* more than it now issues upon securities, *Norman* 3084–3094——Further statement that an issue of an additiona 2,000,000*l.* on securities is not desirable; the general effect would be that there would be 2,000,000*l.* more in gold thrown into the market, and that it would principally go abroad, *ib.* 3533–3537.

An extension of the limit of issue from 14,000,000*l.* to 16,000,000*l.* would not give any palpable relief to trade, and would merely result in the withdrawal of 2,000,000*l.* from the bullion reserve, *Right Hon. Lord Overstone* 3690–3694. 3908–3911——Inference from the circumstance of the crisis of 1797 opposed to an extension of the issues upon securities, *ib.* 4179.

Objection by Mr. Weguelin, in letter dated the 10th November 1856, to an increase of the amount of active circulation issued upon gold, *App. p.* 3.

Sundry objections urged by Mr. Neave against the proposition for increasing the amount issued upon securities to 16,000,000*l.*, *App. p.* 5.

Decided objection by Mr. Latham to increasing the amount of issues upon securities; any alteration should be in an opposite direction, *App. p.* 16, 17.

Disapproval by Mr. B. B. Greene of an extension of the limit of issue to sixteen millions, *App. p.* 19.

II. *Country Banks:*

1. Statements in favour of a power of Increased Issue on Securities:

Approval of a removal of the restrictions imposed in 1844 and 1845 upon the circulation of country banks, *Newmarch* 1411–1413——There is in principle no reason why the banks in Scotland and Ireland should not equally with English banks be released from the restrictions now imposed upon their circulation, *ib.* 1417. 1517, 1518——Belief that there is no necessity for the present restriction upon country issues, *Mill* 2043.

Memorial of the Huddersfield Banking Company and the West Riding Union Bank, praying to be placed on the same footing as Scotch and Irish banks, as regards the issue of notes, *App. p.* 348.

Report, 1857—*continued.*

EXTENSION OF ISSUE—continued.

II. *Country Banks*—continued.

1. Statement in favour of a power of Increased Issue on Securities—*continued.*

Memorial of the Sheffield Banking Company, praying to be put on the same footing as Scotch and Irish banks, with regard to the issue of notes, *App. p.* 348. 357, 358.

Memorial of the Gloucestershire Banking Company, requesting to be allowed to issue notes beyond their specified limit for a sum equal to the gold and silver held by them, *App. p.* 349, 350.

Memorial of private banks of issue in the counties of Bedford, Hertford, Buckingham, and Essex, requesting to be put upon the same footing as the Scotch and Irish banks in regard to issue, *App. p.* 351.

Petition of bankers in the counties of Gloucester, Monmouth, York, and Derby, praying to be put on the same footing as the Scotch and Irish banks in regard to the issue of their own notes, *App. p.* 356–358.

Petition of bankers in the city of Coventry, praying to be placed on the same footing as the Scotch and Irish banks, *App. p.* 359, 360.

Petition of bankers in the counties of Lincoln and Northampton, praying to be placed on the same footing as the Scotch and Irish banks, *App. p.* 360, 361.

2. Objections to any Extension of the present Issues:

Disapproval of country banks being allowed to increase their issues upon securities, *Weguelin* 174——Impediments to English country banks issuing upon bullion if empowered to do so, *ib.* 174–177——Non-objection in principle to a similar power in the English country banks as in the Irish and Scotch banks, to issue upon bullion in excess of their fixed circulation, *ib.* 576–585——Contravention of the principle of the Act of 1844, if country banks be allowed to issue any amount in proportion as they deposit Government securities, *ib.* 954——Doubt as to any advantage if the English country banks were put upon the same footing as the Scotch and Irish banks, and enabled to issue in excess of their limited circulation, *ib.* 997–1009.

An allowance to English country banks to issue notes against bullion in excess of their limit of circulation, would simply be to give them an extension of issue, without their keeping any additional bullion in reserve, *Hubbard* 2481–2484——Witness does not recommend that English country banks should be allowed to over-issue against bullion, but he sees no reason for making a distinction between them and the Scotch and Irish banks, *ib.* 2790–2795.

Country banks of issue should remain on their present footing, new banks of issue being prohibited, *Norman* 2945–2952——Objection to any interference with the country banks which shall in any way increase their amount of issues, *ib.* 3037–3041——Further disapproval of a power in country banks to issue to any extent, provided they gave security for two-thirds, and issued one-third upon gold, *ib.* 3542–3544.

Disadvantage in removing the limit placed by the Act upon the amount of country issues, *Right Hon. Lord Overstone* 3977. 3980, 3981.

See also *Circulation*, IV. 4, 5. *Discretionary Issue. Drains of Bullion and Monetary Pressures. Government Interposition. Restriction upon Issue. United States.*

F.

Failures of Banks. Successful working of the Act of 1844 adverted to by Mr. J. O. Hanson, as shown in the comparative absence of bank failures since 1844, *App. p.* 20, 21.

Return of the number of banks of issue and of non-issue that have been established in England and Wales in each year from 1819 to the present time, distinguishing joint stock banks from private banks; of the number which have relinquished business in each year, again distinguishing banks of issue and of non-issue, private banks and joint stock banks; and of the number which have relinquished business in consequence of failure and other causes, *App. p.* 234——Similar return as regards Scotland, *ib.* 235——Similar return as regards Ireland, *ib.* 237.

Account of the number of private and joint stock banks of issue in England at the time of passing the Act of 1844, and whose issues were fixed by that Act; also, the number which still continue in existence as banks of issue, and showing what number have ceased to issue, by compounding with the Bank to use Bank of England notes, and the number that have ceased by failing, *App. p.* 238.

Return of banks of issue that have failed since 1844, with particulars as to the dividends paid, *App. p.* 240.

Fines (Excess of Issue). Account of the banks that have exceeded their limited issues, and of the fines imposed, since the passing of the Act 7 & 8 Vict. c. 32, to the 9th May 1857, *App. p.* 239.

Report, 1857—*continued.*

Floating Capital. Definition of the term "floating capital," *Weguelin* 501–503.

Fluctuation of Circulation. See *Circulation. Inconvertible Notes. Metallic Currency.*

Fluctuation of Rate of Interest. See *Rate of Interest*, 3, 4, 5, 6. *Tooke, Mr. Trade and Commerce.*

Fordham, J. G., & Sons (Royston). Memorial of these bankers, suggesting that the time permitted for taking the averages of the circulation be extended from one month to six months, and that the year be divided into two periods of six months each; and requesting to be put upon the same footing as the Scotch and Irish banks in regard to issue, *App. p.* 351.

Foreign Capital. Effect of a high rate of interest in this country, and of a low price of securities, in attracting foreign capital for investment, *Mill* 2037, 2038. 2163–2184—— Impression that in 1847 there were considerable investments of foreign capital in English securities, *ib.* 2177–2179. 2184——An increased rate of interest causes an increased value of money, and thus leads to the introduction of money from abroad, *Right Hon. Lord Overstone* 3937–3943. 4029–4048. 4112–4117—— Extent to which advances in the rate of interest attract capital from abroad, *Chapman* 5068–5074.

Foreign Exchanges. The circulation applies merely to the conduct of the trade of the country, and is not materially influenced in amount by varying exchanges, *Weguelin* 651–669—— An adverse exchange tends at first to increase the circulation, and, if of long duration, subsequently to contract it, *ib.* 668, 669.

Three categories into which all foreign drains resolve themselves, *Newmarch* 1702—— Examination on the question whether the transfer of 6,000,000 *l.* of capital from this country in the shape of iron and locomotives, has an equal effect upon the exchanges as though it were sent in coin, *ib.* 1791–1804. 1927–1938.

The bills received by the Bank for discount are an important evidence of the amount of operations connected with the foreign payments of the country, *Hubbard* 2567.

Many ways in which a heavy foreign expenditure may be met besides that of an export of bullion, *Right Hon. Lord Overstone* 3709–3712.

Means of managing our foreign payments under the proposed system of inconvertible notes, *Twells* 4558–4565. 4584. 4629, 4630.

Account of the rates of exchange between London, Paris, Hamburgh, and Amsterdam, from the last day of each week from the 7th September 1844 to the 24th December 1847, *App. p.* 114–119——Similar account from the last day of each week from the 1st January 1848 to the 27th December 1856, *ib.* 120–135.

See also *Drains of Bullion and Monetary Pressures. India (State of the Exchanges).*

Foreign Loans. Considerable exportation of bullion on account of the Turkish and Sardinian loans, *Weguelin* 22——Way in which a notice of a French loan would at once affect the value of money in this country, *Right Hon. Lord Overstone* 4243–4248.

Foreign Railways. Increased abstraction of capital from this country for foreign railways, *Chapman* 3122, 3123.

Forgery. Anticipated increase of forgery if the country issues were entirely replaced by Bank of England notes, *Newmarch* 1535–1540——Inconvenience and increased risk of forgery if Bank of England notes supplied the place of all the country notes, *Mill* 2221–2227.

Any greater risk of forgery, if there were Bank of England notes only, is not a sufficient objection to one uniform currency, *Hubbard* 2444——Doubt whether there would be any greater risk of forgery if there were but one issuing bank, *ib.* 2708, 2709. 2852–2854.

See also *One Pound Notes*, 3.

France. Increased demand for gold in France in consequence of the change in the circulation in that country, *Weguelin* 30——Absence of inconvenience in France from the reduction in the denominations of notes, *Hubbard* 2735–2738.

See also *Bank of France.*

G.

Gibbs, Henry Hucks. Letter from Mr. Gibbs to the Governor of the Bank of England, dated the 13th October 1856, in decided approval of the Act of 1844, and in general approval of the Acts of 1845, *App. p.* 10.

Glasgow. Letter, dated the 12th December 1855, from the managers of the Glasgow banks to Sir G. C. Lewis, suggesting that the Scotch banks be allowed to hold Government securities in lieu of gold for their excess of circulation, or for a certain portion of it, *App. p.* 342, 343.

Report, 1857—*continued.*

Glasgow—continued.

Petition of merchants, manufacturers, shipowners, and others of the city of Glasgow and its neighbourhood, complaining of the present currency laws as affecting Scotland, and praying for amendments therein, *App. p.* 361, 362.

Glasgow and West of Scotland Guardian Society for the Protection of Trade. Petition submitted on the part of this society, with a view to certain alterations in the present law regulating the issue of bank notes in Scotland, *App. p.* 359.

Gloucester Branch (*Bank of England*). Account of the average circulation of twenty-one days and seven days bills in each year from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days and other bills in each year from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year from 1832 to 1847, both inclusive, *App. p.* 26——Similar accounts for each year from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days bills during the year 1847, *App. p.* 28, 29.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33.

Gloucestershire Banking Company. Memorial of the Gloucestershire Banking Company, submitting that it would be no infringement of the principle of the Act of 1844, yet of great benefit to them and their customers, to take the averages half-yearly instead of monthly; also that they be allowed to issue notes beyond their specified limit for a sum equal to the gold and silver held by them, *App. p.* 349, 350.

Gold:

1. *As to the Purchase of Gold by the Bank.*
2. *European Imports and Exports since* 1851.
3. *Effect of the large Imports upon the Bank Reserve.*
4. *Internal Circulation; Increase of late Years.*

1. *As to the Purchase of Gold by the Bank:*

The Bank buys gold at 77 *s.* 9 *d.* per ounce, and it issues sovereigns at 77 *s.* 10½ *d.*, charging 1½ *d.* an ounce for the time occupied in coining the bullion, *Weguelin* 361, 362.

Suggestion that it should not be imperative upon the Bank of England to purchase all the gold brought into the country; ill effect of their doing so when gold is abundant, *Twells* 4598–4602. 4809.

Recommendation by Mr. Dobree, that the Bank be relieved from the obligation of buying all gold bullion; object thereof, *App. p.* 22.

Monthly statement of bullion bought and sold by the Bank of England, distinguishing gold from silver bullion from the 1st January 1832 to the 31st December 1847, *App. p.* 82–85——Similar statement for each month from the 1st January 1848 to the 31st December 1856, *ib.* 86, 87.

2. *European Imports and Exports since* 1851:

Particulars as to the amount of gold imported and exported in the years 1851–56, *Weguelin* 14–17——Estimate that the total amount of gold imported into Europe in the years 1851–57, has been 109,510,000 *l. ib.* 15. 17——Estimated export of 4,891,000 *l.* from Europe to the East in the years, 1851–57, *ib.* 17——Total export of about 20,000,000 *l. ib.*——Paper, showing that during the last six years there has been an increase of about 90,000,000 *l.* to the European stock of gold, *ib.*

3. *Effect of the large Imports upon the Bank Reserve:*

Great relief evidently given to the Bank by the arrival of Australian gold, *Newmarch* 1348–1354. 1425–1429. 1508, 1509. 1716–1726——Slight and temporary effect of the large arrivals of gold upon the rate of interest, *Mill* 2119——Probability of a portion of the increased reserve of bullion being owing to the increased importation of gold, *Norman* 2883–2887.

Evidence strongly opposed to the proposition that the larger amount of bullion since the Act of 1844, is the effect of the importation of gold from Australia and California, *Right Hon. Lord Overstone* 3649.

Great relief given by the imports of gold from Australia and California, *Twells* 4591——The welfare of the commercial world seems to depend at times upon the arrival or non-arrival of a gold ship; this is an unsound state of things, *ib.* 4591–4593.

Great and valuable effect of the imports of gold in enabling the country to meet the existing drain of bullion, *Chapman* 5310–5314——It is impossible to say what the consequences of the Act would have been, had the gold discoveries not taken place, *ib.* 5310, 5311.

Report, 1857—*continued.*

Gold—continued.

4. *Internal Circulation; Increase of late Years:*

Belief that there has been an addition of nearly 30 per cent. to the internal circulation of gold in this country since 1851, *Weguelin* 19, 20——Grounds for the statement that the gold circulation has increased about 30 per cent. within the last six years, *ib.* 51. 122——Data for the estimate that the gold circulation now amounts to about 45,000,000 *l.*, *ib.* 116–123.

Estimate of 50,000,000 *l.* as the amount of gold in circulation, *Neave* 123–125——Doubt whether the increase has been so much as 30 per cent. since 1851, *ib.* 124.

Witness has made careful inquiries as to the amount of gold in circulation, and concludes that at the close of 1856 there was as much as 70,000,000 *l.* in circulation in the United Kingdom, and that not less than 20,000,000 *l.* of this is owing to the influx of gold from Australia and California, *Newmarch* 1425——Remarks on the circumstance of 17,580,000 *l.* in gold having been sent to the branches of the Bank of England in the years 1850-55, whilst apparently a very small amount has returned to the Bank in London, *ib.* 1727–1736——Explanation as to the great increase of late years in the gold circulation, whilst the note circulation has continued nearly uniform, *ib.* 1737–1751——An increase of trade leads to an increase in the gold circulation, but not to an increase in the notes, *ib.* 1738–1741——Absence of economy in the gold circulation by the Act of 1844, *ib.* 1748–1751——Probable amount of the gold circulation in 1834 and 1844, *ib.* 1965–1967.

Monthly statement of the gold coin sent to and received from the branches of the Bank of England, from the 1st January 1848 to the 31st December 1856, *App. p.* 289.

See also *Bullion Reserve.* *Light Gold.* *Metallic Currency.* *Standard of Value.*

Government Accounts (*Bank of England*). List of upwards of forty Government accounts kept by the Bank on behalf of the public, *Weguelin* 155——Different classes of accounts kept by the Bank for the Government, distinction between public and private accounts being often difficult, *ib.* 156.

Further evidence relative to the accounts kept by the Bank for the Treasury, *Weguelin* 406–431——Mixed character of some accounts, *ib.* 407——The directions from the Treasury state whether an account is public or private, *ib.* 408–410——Remarks relative to the account of the Registrar of the Admiralty and the Chancery accounts, which are classed as private, *ib.* 413, 414. 419–426——List of the private deposits, *ib.* 415——List of the public deposits, *ib.* 416.

Account of the average balances on miscellaneous official accounts, not included in public deposits, during the years 1855 and 1856; also on miscellaneous accounts of an official character, not of Government moneys, *App. p.* 306, 307.

Government Debt. Loan of 11,015,000 *l.* due by the Government to the Bank, *Weguelin* 138, 139; and *App. p.* 94–113.

Explanation as to the Bank receiving only three per cent. on their loan of eleven millions to Government, *Weguelin* 336-340. 349——No advantage could accrue if the Bank were empowered to turn the debt into convertible securities, *ib.* 1181–1183. 1242——Sense in which the loan of 11,000,000 *l.* to Government at three per cent. is a sort of compensation for the privileges of the Bank, *ib.* 1240, 1241.

Government Interposition. Disapproval of empowering the Government to allow the Bank under peculiar circumstances to issue notes in excess of the present limit, *Newmarch* 1384, 1385——Objection to the executive Government interfering with the administration of the Bank oftener than is possibly necessary, *ib.* 1386–1392——Further statement that the Government should not interfere with the discretion of the Bank in regard to its reserve, &c., *ib.* 1486–1488. 1541–1547.

Established practice of the Government not in any way to interfere with the discretion of the directors in the management of the Bank, *Hubbard* 2383——As regards any circumstances which cannot be provided for by the Act of 1844, they are of so exceptional a nature that it would be much better to provide for them as they occur, by direct legislation, *Norman* 3639.

See also *Discretionary Issue.* *Drains of Bullion and Monetary Pressures*, II. 3.

Government Issue. Inexpediency of the Government being the managers of the Issue Department, with power to increase the issue in times of pressure, *Weguelin* 78–82——Evidence in detail opposed to the establishment by Government of a central bank of issue, *ib.* 771–780——Sundry advantages possessed by the Bank of England for managing the circulation which could not be possessed by a bank managed by a different body, and conducting the issue merely, *ib.* 771 *et seq.*——Unimportance of any additional security which might attach to an independent bank of issue, *ib.* 784–789——Very considerable expense without corresponding profit, if Government undertook the issue of notes, *ib.* 792–810.

Report, 1857—*continued.*

Government Issue—continued.

A Government bank of issue in the provinces would be almost a sinecure, *Hubbard* 2451, 2452——The Bank of England is the best possible institution for a central bank of issue; evidence hereon opposed to the establishment of a Government bank of issue, *ib.* 2453–2480——A Government bank of issue would doubtless yield considerable profit, *ib.* 2455–2458——The business of issue could not be managed so well by any department of Government as by the Bank of England, *ib.* 2457. 2459, 2460. 2479, 2480.

Objections to the power of issue being transferred from the Bank of England and exercised directly by Government, *Norman* 2953–2963.

The issue of paper money representing coinage should be under the regulation of the same hands as those which manage the coinage, *Right Hon. Lord Overstone* 3648——Witness now looks upon the Issue Department as being so effectually separated from the Banking Department, that it is not necessary or expedient to make the separation more completely nominally by placing the issues directly under Government, *ib.* 3663–3671.

Argument adduced by Mr. Weguelin, in letter of the 10th November 1856, against the issue of notes being undertaken by Government, *App. p.* 3.

Government Letter of October 1847. See *Drains of Bullion and Monetary Pressures*, II. 3.

Government Securites. An available and sufficient amount is always held by the Bank in Government securities, *Weguelin* 261.

Account of the Government securities of the Bank, as published weekly in the "Gazette" since the passing of the Act 7 & 8 Vict. c. 32, from the 31st August 1844 to the 25th December 1847, *App. p.* 94–99——Similar account for each week, from the 1st January 1848 to the 27th December 1856, *ib.* 100–113.

Account of the total amount of Government securities held by the Bank from the last day of each week, from the 7th September 1844 to the 27th December 1856, *App. p.* 136–147.

Return of all purchases and sales of public stocks or Exchequer bills severally made by the Bank in each week, from the 21st January 1848 to the 2d May 1857, and the rates of such purchases and sales, *App. p.* 242–277.

Grant, Gillman, & Long. Petition of these bankers, praying that compensation be continued for their relinquishment of issue, *App. p.* 352.

Greene, Benjamin Buck. Letter from Mr. Greene to the Governor of the Bank of England, dated the 10th November 1856, approving generally of the Act of 1844, but suggesting certain alterations therein, and in the Acts of 1845, *App. p.* 18, 19.

Gunner & Co. Petition of these bankers, praying that compensation be continued for their relinquishment of issue, *App. p.* 352.

H.

Hammond & Co. (*Kent*). Petition of these bankers, praying for certain alterations in the Act of 1844, *App. p.* 353, 354.

Hankey, Thomson. General approval by Mr. Hankey of the Acts of 1844 and 1845, *App. p.* 18.

Letter from Mr. Hankey to the Chancellor of the Exchequer, dated the 5th November 1856, further expressing a general approval of the Act of 1844, but suggesting sundry important provisions in the event of fresh legislation on the subject of the currency, *App. p.* 22, 23.

Hanson, John Oliver. Letter from Mr. Hanson to the Governor of the Bank of England, dated the 4th October 1856, in approval of the Acts of 1844 and 1845, *App. p.* 8.

Further letter from Mr. Hanson to the Governor of the Bank, dated the 19th November 1856, testifying to the successful working of the Acts of 1844 and 1845; approval, however, of an extension to 16,000,000*l.*, as the limit of issues upon securities, *App. p.* 20, 21.

Harrison, General. Strong views expressed by General Harrison, in his inaugural address as President of the United States, in opposition to a purely metallic currency, *Capps* 5498.

Harvest Failures. See *Import of Corn.*

Harwood, Hatcher, & Sams (*Gloucestershire*). Petition of these bankers (issuers of their own notes) praying for certain alterations in the Act of 1844, *App. p.* 356.

Hilton, Rigden, & Co. (*Kent*). Petition of the bankers, praying for certain alterations in the Act of 1844, *App. p.* 353, 354.

Report, 1857—*continued.*

Hoarding. Natural unwillingness of the community to keep by them needless currency, either in notes or gold, *Hubbard* 2657. 2659, 2660.

The large absorption of bullion from the Banks of England and France since 1853 is chiefly to be accounted for by hoarding on the Continent, *Alexander* 4345–4347.

Defect of the Act in not providing for a sudden withdrawal of the circulation in consequence of unjustifiable hoarding, *Chapman* 4904——The power of individual capitalists in London to withdraw 1,000,000*l.* or 2,000,000*l.* of notes from circulation is not a proper state of things; illustration of the existence of this power, and the object of exercising it, *ib.* 4963–4968——In a time of panic a hoarding of the circulating medium is only natural, *ib.* 5292, 5293.

Further statement as to the expediency of guarding against sudden withdrawals of the circulation by capitalists, or against unjustifiable hoarding, *Chapman* 5356–5359. 5383–5387.

Statement by Mr. Blair, manager of the Bank of Scotland, as to undue alarm and hoarding being a consequence of the stringent provisions of the Act of 1844, *App. p.* 329.

See also *Drains of Bullion and Monetary Pressure. Panics.*

Hubbard, John Gellibrand. (Analysis of his Evidence.)—Was Deputy-governor of the Bank from 1851 to 1853, and Governor from 1853 to 1855; 2319——Has been a Bank director almost uninterruptedly since 1838; 2320, 2321——Is well acquainted with the Acts of 1844 and 1845; 2322, 2323——Considers that the separation between the Issue and Banking Departments has been, both in a scientific and in a practical view, most important and most beneficial, 2324 *et seq.*

Perfect character of the separation, though the two departments are managed by the same body, 2326——Convenience in the departments being under the same roof, *ib.*——No inconvenience whatsoever can arise from the bullion being as it were cut in two by the separation of the departments, 2327——The average amount of bullion in the Banking Department is not more than about 600,000*l.*; *ib.*

The reserve of notes in the Banking Department is a voucher of so much bullion, precisely in the same way that notes in the hands of the public are vouchers for bullion, 2328–2331——But for the provision of the law compelling the Bank to issue upon bullion when the notes are in excess of a certain quantity, the note reserve in the Bank would be altogether an indefinite quantity, 2332–2338——The existence, separately, of the Issue Department is ancilliary to the principle of the limitation of the credit issues, 2337, 2338.

Diminution of the bullion in the Bank whether a drain be for home or foreign purposes, 2339——Simple and most useful office performed by the Issue Department in placing the currency upon a solid basis, 2340——Grounds for concluding that the practical effect of the Act has been largely to increase the reserve of bullion in the Bank, 2341–2347——Arguments opposed to the proposition of Mr. Tooke and Mr. Newmarch that the Bank should keep an average of about 10,000,000*l.* or 12,000,000*l.* in bullion, without any limit upon issue, 2349–2353.

Absence under the present law of any practical interference with the natural banking operations of the Bank, 2351——Absence of limit to the amount of the circulation, 2351, 2352——Except as regards the lapsed issues of country banks, it is not desirable to extend the credit issue of the Bank of England, 2354–2364——The Bank should have been allowed to issue to the full extent of the lapsed issues instead of only to the extent of two-thirds, 2354–2357. 2485.

The effect of an addition of 2,000,000*l.* to the credit issue would be that the notes in the hands of the public would not be increased, whilst the bullion reserve of the Bank would be diminished by the amount thus added to the credit circulation, 2358–2364——Great difficulty of affecting the amount of notes in the hands of the public, 2358.

The separation of the departments has caused the Bank to look more accurately and closely to its position as bankers, but has had no influence whatever upon the natural laws which regulate the value of money, or the rate of interest, 2365, 2366——Save in exceptional cases, the Bank has no power whatever in permanently affecting the rate of discount, 2365–2369. 2372——The Bank has always followed the market in varying the rate, 2369——The proposition of Mr. Newmarch, that the Bank rate should never be less than four per cent., is extremely unsound, and might moreover be easily evaded, 2370–2375.

Larger amount of discounts in proportion as the rate is high, 2376–2379——Larger accommodation given by the Bank to the public since 1844 than previously, 2379——The Act has not in the slightest degree diminished either the power or the disposition of the Bank to accommodate the public; practice previously to and since 1844 adverted to hereon, 2380–2382——Consideration of the pressure upon the Bank in 1847, and of the very liberal accommodation then given, 2380–2382——The Act was thoroughly successful during the pressure of 1847, and Government interference was not at all necessary, 2382.

Established practice of the Government not in any way to interfere with the discretion of the directors in the management of the Bank, 2383——Inexpediency of empowering the Bank by Act of Parliament to break through the restrictions of the law in time of emergency, 2384–2386——Sales of securities and advances in the rate of discount are the twofold means for checking an efflux of bullion, 2387, 2388.

Report, 1857—*continued.*

Hubbard, John Gellibrand—(Analysis of his Evidence)—*continued.*

Satisfactory position of the Bank during the pressure of the late war, 2388, 2389——Salutary operation of the restrictions imposed by the Bank upon the commercial world during the war; the Act would have continued equally effectual had the war continued, 2389-2399——Inadequacy of a stipulated amount of reserve as a means sufficient of itself to meet the pressure of 1847, or of the late war, 2393-2396.

Argument that the movements of bullion, and the consequent variations in the rate of interest, have no influence whatever upon prices, 2400——Important effect of a rise in the rate of interest upon the value of interest-bearing securities, 2400. 2402-2406——Table delivered in (*App. p.* 290, 291.) in illustration of the want of coincidence between prices, and the rate of interest, 2400, 2401——Close affinity, as shown by this table, between the movements in the amount of bullion and the rate of interest, 2400.

Save under exceptional circumstances, neither the Bank of England, nor any other bank, has power to increase its circulation, 2407-2413——The movement of prices determines the amount of circulation, but the circulation does not affect prices, 2407-2409——By setting on foot new speculations a banker may for a time increase the circulation, 2410-2413.

Grounds for the conclusion that the Bank of England note is a legal tender in the Banking Department, 2414-2420——Intention of the Act of 1844 that in the Issue Department there should be certain securities distinctly set apart for the protection of the note-holders, and also that the bullion should be appointed to meet the notes issued against it, 2421——Opinion that too much information is given in the published accounts of the Bank; the public do not yet properly comprehend them, 2422, 2423. 2426-2428——Approval of the form or principle on which the accounts are exhibited, 2424-2426.

Contemplation by the promoters of the Act that the country issues would be voluntarily commuted, 2429——Causes of the failure of the voluntary commutation clause, 2430-2432——Check by the Act upon an abuse of country issues, 2433——Absence of proper security for the payment of country notes, 2433. 2442——Previously to 1844 the country banks, in many instances, made imprudent investment of their capital, and extended their issues too far, 2434-2437.

It is very desirable that there should be one uniform currency for England and Wales, even if it did not extend to Scotland and Ireland, 2438. 2440. 2442. 2445. 2447——The way to accomplish uniformity of currency would be to render compulsory the permissive clauses of the Act upon certain definite terms, 2439-2441——Advantage in having exclusively Bank of England notes, which would pass everywhere, the circulation of country notes being now limited to particular districts, 2442, 2443. 2446——Any greater risk of forgery if there were Bank of England notes only is not a sufficient objection to one uniform currency, 2444.

Security for country issues (if they be continued) would be desirable, but would most likely be objected to on the part of the banks, 2447——Doubt whether an issuing bank has any peculiar advantages or facilities in doing ordinary banking business, 2448-2450——A Government bank of issue in the provinces would be almost a sinecure, 2451, 2452——London is the only place where a bank of issue can properly be, 2451——The Bank of England is the best possible institution for a central bank of issue; evidence hereon opposed to the establishment of a Government bank of issue, 2453-2480.

An allowance to English country banks to issue notes against bullion in excess of their limit of circulation, would simply be to give them an extension of issue without their keeping any additional bullion reserve, 2481-2484——Reasonableness of an extension of the time for taking the averages in the case of the returns of country banks, as they do not now venture to the full extent of their limit of circulation, 2482.

A permission to Scotch banks to over-issue against Bank of England notes or securities would in all probability be perfectly safe, but it would be an addition to their right of credit issue, and an abrogation of the present law, 2486. 2488, 2489——Respect in which the parallel sought to be established between the Scotch and Irish banks and the Bank of England, in regard to their issues, does not hold good, 2486-2490——Doubt as to its being any inconvenience to country banks to keep a large amount of securities as against their circulation, 2491-2493.

If the Bank of England note were a legal tender in Scotland and Ireland, the simplest thing for the Scotch and Irish banks to do would be to issue their own notes as far as they can, and then to issue Bank of England notes, 2494-2496. 2513, 2514——An uniform circulation is more especially desirable for England and Wales, but should also be extended to Scotland and Ireland, 2497, 2498——Disadvantages of the private bank circulation of Scotland and Ireland; less value of the notes when circulated in England, 2498-2502.

Disapproval of the issue of notes for less than 5*l.* in England, so long as the circulation is not uniform, 2503——Convenience in the issue of 2*l.* or 3*l.* notes if the small notes in Ireland and Scotland were annihilated, 2503——Greater liability to forgery in the case of small notes, 2503-2506——Greater probability of a drain or panic on account

Report, 1857—*continued.*

Hubbard, John Gillibrand—(Analysis of his Evidence)—*continued.*

account of 1 *l.* notes than of 5*l.* notes, 2506——The danger of a run upon a country bank arises more from the note-holders than the depositors, 2507——The depositors have generally the larger stake, 2508——Unless the Scotch and Irish private notes are absorbed in an uniform currency, witness sees no weighty reason against the circulation of the smaller notes in those countries, 2509–2512.

On the whole, witness considers that the principle of the Act of 1844 has acted most beneficially, and requires no alteration in any essential point, 2515——As regards the constitution of the Bank management, it would be an improvement if there were three governors, 2516——It would also be an improvement if only four, instead of eight directors went out by rotation, *ib.*——The Governor or Deputy Governor is supposed to attend at the Bank every day, 2518, 2519——The Directors meet every Thursday, 2520——The treasury committee, consisting of those Directors who have passed the chair, meet every Wednesday, 2521–2523.

Opinion that the depositors have not directly the same claim in law as the note-holders have upon the bullion in the Issue Department, 2524–2527——It is possible under the Act of 1844 that there might not be 1 *l.* of bullion in the Issue Department, 2526——Cause of the present comparatively high price of Exchequer bills, 2528, 2529——Limit of the action of the Bank to the management of its capital and deposits, that is of its securities and reserve, 2530–2533——Great importance of the operations of joint-stock banks adverted to with reference to the expediency of an inquiry by the Committee into their management, 2534–2539.

Further reference to the propriety of substituting the Bank of England circulation to the full extent of the lapsed country circulation; belief that coin would not to any appreciable extent take the place of the lapsed issues, 2540–2544——A high rate of discount has an immediate and sensible effect in causing sales of foreign securities bearing interest, though it has no effect upon the prices of commodities, 2545–2555——Fluctuations in the bullion in the Bank represent very nearly the fluctuations in the discounts held by the Bank, 2556–2559——Causes of fluctuation in the bullion; the cashment of debts due by foreign countries tends to an increase in the bullion, 2560–2566.

The bills received by the Bank for discount are an important evidence of the amount of operations connected with the foreign payments of the country, 2567——Approval of a continued action upon the rate of discount as the best mode of correcting adverse foreign exchanges, 2568–2574——Disapproval of a restriction upon the date of bills discounted by the Bank, as being an unequal and arbitrary mode of correcting the exchanges, 2569. 2574–2577.

[Second Examination.]—Further statement that the amount of circulation does not affect prices, but is dependent upon prices, 2578–2580. 2593. 2663–2666——A fluctuation in prices will result from an increase in the entire supply of the precious metals, but not from any alteration in their distribution from day to day, 2581–2592.

Explanation as to there having been a decrease within the last five years to the extent of 2,000,000 *l.* in the circulation of the larger denomination of bank notes, and an equal increase in the circulation of notes of 5 *l.* and 10 *l.*; 2593——Usefulness of the drafts authorised by the Treasury in 1855 for the payment of Customs duties with a view to an economy of bank notes, 2593–2595——Power of the Bank, by a sale of securities, slightly to contract the circulation; the effect of such proceeding chiefly falls on the deposits, 2596–2606.

Tendency of large advances on the part of the Bank temporarily to increase the active circulation to a limited extent, 2607–2614——Fluctuations in the circulation are determined by the requirements of trade, and not by the will of the issuers, 2615. 2655–2666——The demand for advances which is consequent upon an adverse foreign exchange mainly exhibits itself in the withdrawal of bullion, 2616–2627. 2683–2685——The deposits are, comparatively, but slightly affected by variations in the rate of discount, 2618–2625.

Further reference to the importance of the separation of the banking and issue departments, 2628——Importance of the clear distinction made by the Act between bank notes as currency, and bills of Exchange, &c., as representations of credit, 2628, 2629——The more distinguishing and important feature of the Act is, that it puts a strong limitation to the creation of credit paper, and thereby converts such credit into capital, 2629–2643.

Greater security for the convertibility of the note since the Act of 1844; 2631–2645——Strong objection to a power of indefinite issue as held by the Bank previously to 1844; 2632–2643——Beneficial operation of the Act in causing a larger reserve of bullion in the Bank, 2644. 2682——Practice of the Bank to pay its depositors in notes, as being a legal tender in the Banking Department, and subsequently to pay its notes in gold in the Issue Department, 2645–2653.

The variation in circulation would be just the same if the currency were purely metallic, 2654——The issuer of a metallic circulation would have no power in determining the amount, 2655. 2657——Inexpediency of any limitation upon circulation if the currency

Report, 1857—*continued.*

Hubbard, John Gellibrand—(Analysis of his Evidence)—*continued.*

were metallic, 2655. 2657, 2658——National unwillingness of the community to keep by them needless currency either in notes or gold, 2657. 2659, 2660——A high rate of interest may have some effect in causing people to economise their currency, 2657. 2661, 2662. 2755–2757.

Evidence to the effect that country issuers cannot affect the entire circulation, though as rival issuers between themselves, or with the Bank of England, they may cause variation in the quantity of notes which each might keep out, 2667–2680——The Bank rate of discount is entirely at the discretion of the Bank directors, 2681——The reserve of the Bank is dependent on the discretion with which the business is conducted, but the bullion in the Issue Department is not dependent on the same discretion, 2682–2685.

Object and advantage of selecting 14,000,000 *l.* as the limit of issue upon credit, 2686–2689——Objection to an extension of the credit issue to 16,000,000 *l.*, on the ground more especially of the changes which have occurred in the circulation of different denominations of notes, 2690–2694——Further suggestion that the lapsed issues of country banks be replaced to their full extent, 2693——The result of an extension of issue to 16,000,000 *l.* would be, that the Issue Department would hold 2,000,000 *l.* more of securities, and 2,000,000 *l.* less of bullion, 2695. 2696.

There has been no direct issue of Bank of England notes in consequence of the lapsed issues of any country bank, 2697–2700——Bank of England notes issued in London would readily find their way into remote districts, where issues may have lapsed or notes are in demand, 2701–2706. 2709. 2714–2716——Further statement as to the advantage of a central bank of issue in the uniformity and undoubted convertibility of the whole currency, 2707–2710. 2812. 2815——Doubt whether there would be any greater risk of forgery if there were but one issuing bank, 2708, 2709.

Witness does not contemplate any issuing branches to the Bank of England, if the only bank of issue, 2710–2714——The deposits of issuing banks are probably much more profitable than their issues, 2711, 2712. 2785——A central bank of issue, not carrying on ordinary banking operations, might be conducted with considerable profit, 2713, 2714——Process by which a central bank would get out its notes into the hands of country banks and of the public, 2714–2721. 2816–2818.

Consideration of the over-issue of Scotch banks, as based upon bullion; a limitation upon the credit issue would probably be a better plan, 2722–2727——In limiting the amount of the credit issue, the Act of 1844 necessarily provides in practice, though not in law, for a reserve of bullion, 2728–2732. 2739–2741——As regards any effect upon credit or prices, there would be no inconvenience in the issue of 1 *l.* notes or 2 *l.* notes in England, 2733–2738——In the event of so very improbable a contingency as a reduction of the circulation to 14,475,000 *l.*, the Bank would doubtless still keep a reserve of bullion, in order to maintain the convertibility of the note, 2739–2746——Reference to a suggestion by witness fourteen years ago, with a view to retaining a sufficient proportion of bullion to the entire currency, under certain contingencies, 2744.

Causes of the larger amount of circulation in 1852 and 1853 than in the subsequent years, 2747–2758——Witness delivers in a table, showing the periods and extent of variation in the rate of discount at the Bank of England from 1844 to 1856, together with the amount of reserve and amounts under discount at the same period, 2759. 2760——This table shows the fallacy of the notion that the restriction of banking accommodation to the public is tantamount to a rise in the rate of interest, 2759——The fact is, that the Bank discounts or advances are larger as the rate of interest is higher, 2759, 2760. 2842–2844.

Argument showing the fallacy of Mr. Mill's theory, that in consequence of the separation of the departments, a drain of 3,000,000 *l.* has a double effect, and is tantamount to a drain of 6,000,000 *l.*; 2761, 2762——As regards the circulation, the relative proportion of gold to paper may be varied, but the total amount cannot be varied by any enactment, 2763, 2764——In selling securities, the object of the Bank is to strengthen its reserve, and the object is doubtless to some extent attained thereby, 2765–2772.

The management of the Banking Department is totally distinct from any question relating to the active circulation, 2766, 2767——The Banking Department should pay due attention to the Issue Department, as indicative of the state of the bullion reserve, 2767——By advances in the rate of interest concurrently with the sale of securities, the Bank can always establish a proper proportion between the reserve and the liabilities, 2768–2773——The Act has not in any way aggravated the effect of a drain of bullion, 2773. 2796.

Witness is quite satisfied that the Act has not operated prejudicially to the mercantile community, 2774–2777——The variations in the rate of interest hardly have had any injurious effects upon commerce, inasmuch as the Bank discounted 25,000,000 *l.* in one year without incurring any bad debts, 2774–2777——Belief that under the former Act the natural tendency of country banks of issue was to keep their notes in circulation, and to take less perfect securities for their loans than they would do under the Act of 1844; 2778–2784.

Report, 1857—*continued.*

Hubbard, John Gellibrand—(Analysis of his Evidence)—*continued.*

Convenience amounting to necessity under which the Scotch and Irish banks over-issue upon bullion which they are required to deposit, 2786–2788——Hardship on the English country banks in their finding it necessary to keep considerably within their credit limit of circulation, through the fear of penalties, 2789——Further approval of an alteration in the system of taking the averages as regards the country banks' returns, 2789. 2804——Witness does not recommend that English country banks should be allowed to over-issue against bullion, but he sees no reason for making a distinction between them and the Scotch and Irish banks, 2790–2795.

Under the Act of 1844 it is almost impossible for the bullion reserve to be reduced to 2,000,000*l.*; 2797——During the pressure in 1847, Government interference was by no means essential for the safe working of the Act, 2798, 2799——Opportunities of the Bank, at the height of the pressure, for meeting the withdrawal of the deposits of the London bankers, 2799–2803.

Witness does not recommend that country banks should be required to give security for their issues, though in some instances of failure it would have been an advantage, 2805–2807. 2812–2814——Reasons why the note-holders are more entitled to security than the depositors, 2808–2811——The proposition for a central bank of issue involves an arrangement for the satisfaction of existing banks of issue, 2812. 2840, 2841.

In the event of a failure in the harvest, and a consequent foreign drain, a rise in the rate of interest would be effectual in righting the pressure, 2819–2821——An advance in the rate of interest, and a consequent sale of securities by the commercial classes, would not necessarily have any connexion with or effect upon the price of wheat or other commodities, 2822–2837——Contradiction and failure involved in the recent operations of the Bank of France in giving a premium in gold for gold, 2838, 2839.

Further statement that the desirableness of a single bank of issue for England and Wales applies with minor force to Scotland and Ireland; witness is in favour, however, of one central bank of issue for the whole kingdom, 2840, 2841——Doubt whether the advances by discount houses are larger when the rate of discount is high than when it is low, 2842–2844——Advances by the Bank upon Government securities and discounts of good bills are usually made at the same rate, 2845.

In isolated cases only has the Bank refused to discount bills having more than sixty days to run, 2846, 2847——The rate of discount is now to a considerable degree self-acting, 2848——Inexpediency of a mechanical self-action, by which the rate should fluctuate with reference solely to the amount of the reserve, 2849–2851——Further question as to there being, on the whole, greater liability to forgery if all the notes in circulation emanated from a central bank, 2852–2854.

Hubbard, Mr. Statement by Mr. Hubbard, dated October 1856, in consideration and approval of the Act of 1844, and recommending its renewal for a period of ten years, subject to some amendments; remarks also upon the Irish and Scotch Acts of 1845, *App. p.* 11–13.

Letter from Mr. Hubbard to the Chancellor of the Exchequer, dated the 28th November 1856, suggesting a plan for the withdrawal of the country issues, and the compensation of the issuers, *App. p.* 22.

Huddersfield Banking Company. Memorial of the Huddersfield Banking Company and the West Riding Union Bank, praying to be placed on the some footing as Scotch and Irish banks as regards the issue of notes, *App. p.* 348.

Hull Branch (*Bank of England*). Account of the average circulation of twenty-one days' and seven days' bills in each year from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days' and other bills in each year from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year from 1832 to 1847, both inclusive, *App. p.* 26——Similar account for each year from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days' bills during the year 1847, *App. p.* 28, 29——Similar statement for the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for 1856, *ib.* 34, 35.

Hunt, Thomas Newman. Letter from Mr. Hunt to the Governor of the Bank of England, dated the 27th October 1856, suggesting the adoption of new principles in regard to the issue of bank notes, but approving of the Act of 1844, *App. p.* 9, 10.

Huskisson, Mr. Views of Mr. Huskisson, that "if the currency consists partly of coin and partly of paper, the excess of paper above what the currency would be if it were coin must be an excess of currency, and must naturally tend to depreciation," *Right Hon. Lord Overstone*, 4185.

Report, 1857—*continued.*

Huth, Charles Frederick. Letter from Mr. Huth to the Governor of the Bank of England, dated the 8th October 1856, in general approval of the Act of 1844, but sugges ing an enlargement of some of the limitations of the Act, *App. p.* 9.

I.

Import of Corn. Any monetary disturbance created by a failure of the harvest must be met by the trade of the country rather than by increased issues by the Bank on credit, *Weguelin* 604-610——Of late years the most important cause of a drain of bullion has been the large import of corn, *Hubbard* 2564——In the event of a failure in the harvest, and a consequent foreign drain, a rise in the rate of interest would be effectual in righting the pressure, *ib.* 2819–2821.

Statement to the effect, that by proper restrictions, importation of corn to the amount of 40,000,000 *l.* might be effected, with a drain of not more than 4,000,000 *l.* in bullion, *Right Hon. Lord Overstone* 4043-4048——Under a system of inconvertible notes there would be much greater pressure than under the present system, in the event of a large importation of corn, *ib.* 4055–4060.

Belief that a large importation of corn would not, under a system of inconvertible notes, produce the evils now consequent upon the drains of bullion necessary to pay for such corn, *Twells* 4733, 4734. 4751–4756.

As regards the pressure in October 1847, it was the result mainly of the quantity of money which was required to regulate our exchanges in consequence of the extraordinary import of corn, *Chapman* 5217, 5218.

Inconvertible Notes:

1. *Proposition for the Issue of Inconvertible Notes.*
2. *Objections to the foregoing Proposition.*

1. *Proposition for the Issue of Inconvertible Notes:*

Suggestion that in lieu of Bank notes issued on securities, there be an issue of legal tender notes, receivable by Government in payment of taxes, but not convertible into specie on demand, *Alexander* 4259. 4270 *et seq.*——These notes should be issued by Government, the Bank of England should receive them in return for securities, and they should be a legal tender when paid out of the Bank, *ib.* 4259, 4260. 4270–4273. 4290–4295. 4352——Way in which the position of the Bank would be much strengthened by the proposed inconvertible notes to be issued by Government, *ib.* 4270 *et seq.*

More equable state of the money market under the proposed system, *Alexander* 4273——Belief that if the Bank had had power in 1847 to issue inconvertible notes on security, the panic would have been obviated, *ib.* 4274–4276. 4287, 4288——Beside the proposed inconvertible notes, the Bank of England should issue upon gold, *ib.* 4289, 4290——The holders of bank notes only should have a right to claim gold in payment for their notes, *ib.* 4291–4299——The so-called inconvertible notes would, as being receivable in payment of taxes, be to that extent convertible; this is an essential point, *ib.* 4297–4299. 4303–4307——The maximum issue of these notes might be fixed at 20,000,000 *l.*, *ib.* 4300–4302——Belief that the proposed notes would not be at a discount as compared with the convertible notes, *ib.* 4308.

As an improvement upon the issue of 14,000,000 *l.* on notes payable on demand, witness recommends the issue of 14,000,000 *l.*, or rather of 20,000,000 *l.* in notes, promising to be receivable by Government in aid of taxes, such notes to be in fact legal tender notes, but not convertible into gold, *Twells* 4541 *et seq.*——Anticipated steadiness in our commercial transactions, and in the rate of interest under the proposed system of inconvertible tender notes, *ib.*

Besides the 20,000,000 *l.* of inconvertible notes, there ought to be an issue of 4,000,000 *l.* or 5,000,000 *l.* in convertible notes, *Twells* 4543, 4544. 4547——The proposed legal tender notes convertible into taxes could not oscillate in amount, *ib.* 4553–4555——The practice of over-issue, as adopted by the French Government, must be avoided, *ib.* 4566, 4567——It is almost impossible that there should be an excess of issue of the proposed notes by the Bank of England, *ib.* 4567——Great improbability of fluctuation in the value of the proposed notes; less fluctuation than in the value of gold, *ib.* 4568–4578. 4611. 4625.

It is immaterial whether the proposed notes be issued by the Government or by the Bank of England, but the latter body could best undertake the issue, on account of the completeness of its machinery, *Twells* 4585, 4586. 4632.——Witness contemplates that country bank notes should be convertible into the proposed legal tender notes, *ib.* 4618. 4628——Witness anticipates that 20,000,000 *l.* in inconvertible and legal tender notes would, under a proper system, be adequate to meet the expanding wants of trade, *ib.* 4624-4630.

Further statements that the proposed 20,000,000 *l.* of inconvertible notes would cause greater uniformity and steadiness in the value of the legal tender than is now the case, *Twells* 4634 *et seq.*——Improbability of any depreciation in the inconvertible and legal tender

INCONVERTIBLE NOTES—continued.

1. *Proposition for the Issue of Inconvertible Notes*—continued.

tender notes, as in the case of the French assignats, *Twells* 4634-4641. 4764-4768——The advantage in the inconvertible notes consists in the fact that gold cannot be required for them, more especially for foreign purposes, *ib.* 4634. 4642.

Examination as to the purchasing power respectively of a 5 *l.* inconvertible note, and of five sovereigns, *Twells* 4635, 4636. 4644-4647. 4655 *et seq.*——The principle of inconvertibility is not violated by making the notes receivable in payment of taxes, *ib.* 4643, 4644——Reason for fixing the amount of inconvertible notes at 20,000,000 *l.*; 14,000,000 *l.* might be sufficient, or the Bank might be safely trusted with a discretionary power as to the limit issued, *ib.* 4663, 4664. 4709-4711. 4743, 4744. 4807——By a proper limit upon the issue of paper, and by making it inconvertible, a more uniform and a sounder currency may be arrived at than by means of anything which is dependent upon barter, *ib.* 4712-4720.

Besides the proposed inconvertible notes, there should be an issue of notes upon bullion, not fixed in amount, but according to the varying rate of the bullion in the market, *Twells*, 4722-4724. 4735, 4736——Belief that the convertible currency and the gold would not rise to a premium, as compared with the inconvertible currency; but if such were to happen, there would be no inconvenience in it, *ib.* 4757-4763——Wide difference between the proposed inconvertible notes and the French assignats, *ib.* 4764, 4765——An issue of convertible notes, as well as an issue of fourteen or twenty millions of inconvertible notes, could not result in a similar fluctuation in the aggregate circulation, as is now the case, *ib.* 4796-4809.

Approval of the proposition for an issue of 20,000,000 *l.* in inconvertible notes in lieu of the issue on securities, *Capps* 5422. 5456-5460——Improbability of the inconvertible notes being at a discount as compared with the notes issued by the Bank on gold; belief, on the other hand, that the former notes might in time be more valuable than gold, *ib.* 5422, 5423. 5458, 5459. 5474. 5485. 5534. 5540——As regards the French assignats, they were issued upon no principle at all, because no provision was made for their redemption, *ib.* 5485——Under a system of inconvertible notes for internal use, there would be no difficulty in settling foreign tranctions, *ib.* 5486-5492——Form in which inconvertible notes might be issued as regards their value to the holders, *ib.* 5528-5533.

2. *Objections to the foregoing Proposition:*

Respect in which, if the note were inconvertible, there would not be the same control upon the issue as now exists, *Newmarch* 1829-1843. 1939-1963——Difficulty, nevertheless, in increasing the issue of inconvertible notes, as shown by experience previously to 1820, *ib.* 1835. 1843——Issue of inconvertible notes by Government only; private bankers can have nothing to do with such issue, *ib.* 1946-1951——An inconvertible circulation may be issued without its becoming suddenly excessive; illustrations of this, *ib.* 1954. 1957-1960.

Witness can hardly conceive it possible to add to the circulation by issuing inconvertible notes, *Norman* 2930-2937——Inconvertible notes would be little more than waste-paper, *ib.* 2931, 2932——A limited issue of 14,000,000 *l.* in inconvertible notes would probably be of the same value as 14,000,000 *l.* in metallic currency, *ib.* 3052-3059.

Evidence strongly opposed to a proposition for the issue of 14,000,000 *l.* in inconvertible notes not payable in specie on demand, conjointly with the issue of a further amount of notes, equal to the amount of bullion, which should be payable on demand, *Right Hon. Lord Overstone* 3812-3825——There would at once be a discount upon the inconvertible notes, and the difference of value between them and the convertible notes would create a state of confusion impossible to be endured, *ib.* 3822-3825.

Further evidence strongly opposed to the proposition for an issue of a certain quantity of notes payable for taxes, *Right Hon. Lord Overstone* 4049-4060——Witness repeats that the proposed notes would be at a discount, as compared with the convertible notes payable in specie on demand, and very disastrous confusion would be the result, *ib.* 4049-4054.

See also *Import of Corn.*

India (*State of the Exchanges*). Large sums leaving this country, in treasure or material, on account of the Indian railways, *Newmarch* 1499-1503. 1790——Grounds for concluding that the exchanges with India are in favour of this country, notwithstanding the large amount of bullion being continually transmitted to the East, *ib.* 1786-1789——To the amount of exports from this country to India is to be added the amount of India House drafts; that is, the funds drawn from India by the East India Company; explanation hereon, showing how these drafts can be said to balance a corresponding amount of imports, *ib.* 1786. 1915-1925.

See also *Drains of Bullion and Monetary Pressures*, III. *Silver.*

Report, 1857—*continued.*

India Trade. The India trade is carried on upon very long credits, and chiefly in bills, *Alexander* 4252——The operation of the Bank of England is of very great importance to the trade, *ib.* 4253, 4254——Importance of less frequent variation in the rate of interest in the case of the India trade, and other trades conducted on long credits, *ib.* 4273. 4326. 4363——State of the East India trade at the present time; unprofitable nature of witness's trade; *ib.* 4330–4333. 4364, 4365.

Influx of Bullion. See *Gold*, 2, 3. *Reserve of Bullion.*

Insolvency of the Bank. Propriety of dismissing from one's calculations so remote a contingency as an insolvency of the Bank, *Weguelin* 1284–1286.

Interest on Deposits. Interest is not allowed by the Bank on private deposits; inexpediency of forcing upon the Bank a system of interest on deposits, as in the case of joint stock banks, *Weguelin*, 159–161. 243–246. 537. 540.

See also *Joint Stock Banks.*

Interest on Loan. Explanation as to the Bank receiving only three per cent. on their loan of 11,000,000 *l.* to the Government, *Weguelin* 336–340. 349——Sense in which this may be considered a sort of compensation for the privileges of the Bank, *ib.* 1240, 1241.

Internal Drains. See *Drains of Bullion and Monetary Pressures.*

Ireland. Necessity, under the Act of 1845, of the Irish banks depositing a certain amount of coin for any issue of notes beyond the amount authorised by law, *Weguelin* 42–45——Complete, though temporary, derangement of the circulation in Ireland by the famine of 1845–46, *Newmarch* 1756–1760——General disapproval of the limit upon issue, *Mill* 2057–2059.

Return of the circulation of the Bank of Ireland, and of private and joint stock banks in Ireland, in each month, from September 1833 to April 1857, *App. p.* 148–152.

Return showing the authorised issues of the banks in Ireland, the actual amounts issued, and the amounts of bullion held by these banks in each week since the passing of the Acts of the 7 & 8 Vict. c. 32, and 8 & 9 Vict. c. 37 and 38, to the 9th May 1857, *App. p.* 182–203.

Account of the aggregate weekly circulation of the notes of banks of issue in Ireland, distinguishing those of 5 *l.* and upwards, and those under 5 *l.*, and showing the total amount, with the amount of bullion held from the 13th December 1844 to the 9th May 1857, *App. p.* 204–213.

Account of the aggregate weekly circulation of the banks in Ireland, from the 19th October 1844 to the 9th May 1857, *App. p.* 214–232.

Return of the number of banks of issue and of non-issue that have been established in Ireland, in each year from 1819 to the present time, distinguishing joint stock banks from private banks; of the number which have relinquished business in each year, distinguishing banks of issue and of non-issue, private banks and joint stock banks; and of the number which have relinquished business in consequence of failure and other causes, *App. p.* 237.

Account of the number of banks of issue in Ireland at the time of passing of the Act of 1845, and whose issues were fixed by that Act; also the number which still continue in existence as banks of issue, *App. p.* 238.

See also *Act* 8 *&* 9 *Vict. c.* 38. *Bank of Ireland. One Pound Notes. Uniform Currency.*

Issue Department (Bank of England):

1. *Absence of any Connexion, save mechanically, between the Issue Department and the Bank of England.*
2. *Functions of the Department.*
3. *Objections to the Management of the Department being transferred from the Bank.*
4. *How far the Banking Department has, in right of its Notes, any special Claim upon the Issue Department.*
5. *Profits of Issue: Arrangement with Government hereon.*

1. *Absence of any Connexion, save mechanically, between the Issue Department and the Bank of England:*

There is a legal and virtual distinction between the Issue and Banking Departments, though it may be called merely a distinction of accounts, *Weguelin* 164, 165. 775–777——The Bank of England are merely administrators of the Issue Department, *Neave* 1144, 1145—— Practical and legal distinction between the Issue and Banking Departments; obligation upon the Bank to abide thereby, *Mill* 2033, 2034——Perfect character of the separation, though the two departments are managed by the same body, *Hubbard* 2326——Purely mechanical character of the operations of the Issue Department, *ib.* 2340. 2387.

The

Report, 1857—*continued.*

ISSUE DEPARTMENT (BANK OF ENGLAND)—continued.

1. *Absence of any Connexion, save mechanically, &c.*—continued.

The term "Bank" should not be associated with the Issue Department at all; the Bank have not in fact any power whatever over the issues, and are merely the mechanical agents of Government in the matter, *Right Hon. Lord Overstone* 3664-3671——The Issue Department belongs to the State, and its management by the Bank of England is merely of a mechanical nature, *ib.* 3953-3959——The Bank merely contracts to do the business of the Issue Department on behalf of the State, being allowed certain profits and incurring certain risks, *ib.* 3954-3959——The Issue Department is now as distinct from the Bank of England as is necessary for all purposes which have reference to the principles affecting the regulation of the exchanges, *ib.* 3969.

Phraseology of portions of the Act adverted to, with reference to witness's view that the Bank of England has not, save mechanically, any connexion with the Issue Department; the Act clearly provides that the department shall be conducted altogether irrespectively of the banking business, *Right Hon. Lord Overstone* 4015-4018——In the Issue Department the Bank have no discretionary action, *ib.* 4015, 4016. 4155, 4156——Witness cannot understand that the term Bank of England includes the Issue Department, *ib.* 4018.

Further evidence in support of the statement that the Issue Department belongs to the State, and has not, save mechanically, any connexion with the Bank of England, *Right Hon. Lord Overstone* 4155-4162——The accidental form in which the banks are paid for the conduct of the issues does not affect the question of the distinct separation of the Issue and Banking Departments, *ib.* 4157-4162.

2. *Functions of the Department:*

Simple and most useful office performed by the Issue Department in placing the currency upon a solid basis, *Hubbard* 2340——The Issue Department is not subject to any control by the Banking Department, its function being merely to exchange notes for gold, *Norman* 3442, 3443—— Outline of the functions and working of the department, *Right Hon. Lord Overstone* 4143-4145.

3. *Objections to the Management of the Department being transferred from the Bank:*

Evidence in favour of the functions of issue remaining, as at present, in the Bank of England, under the control of the State, instead of being undertaken directly by the State, *Weguelin* 78-82. 771 *et seq*; *Hubbard* 2453-2480; *Norman* 2953-2963; *Right Hon. Lord Overstone* 3663-3671——Sundry arguments opposed to any greater separation than at present of the Issue Department from the Banking Department, *Weguelin* 83-87——Convenience in the departments being under the same roof, *Weguelin* 83-87; *Hubbard* 2326.

Arguments adduced by Mr. Weguelin, in letter of the 10th of November 1856, against the separation of the Issue Department from the Bank of England, *App. p.* 3.

4. *How far the Banking Department has, in right of its Notes, any special Claim upon the Issue Department:*

As regards the present separation of the Banking and Issue Departments, the bullion in the latter would nevertheless be liable to pay the debts of the former in the event of the Bank coming under the Winding-up Act, *Weguelin* 785, 786. 811-824——Words in the Act which infer that the directors are restrained from taking bullion out of the issue department without bringing in or cancelling notes for it, *ib.* 1269-1272. 1278, 1279.

The bullion in the specie department is no more applicable to the payment of notes held by the banking department than it is to the payment of any other bank notes, *Norman* 2965——Equal liability of the issue department in regard to the notes in the banking department, and the notes in the hands of ordinary bankers; how far this proposition is affected by the fact of the two departments constituting one corporate body, *ib.* 3229. 3256-3285. 3358-3360——The Bank, or rather the issue department, derives a profit from the notes in the hands of the public, but not from the notes in the banking department, *ib.* 3263-3268.

5. *Profits of Issue: Arrangement with Government hereon:*

Calculation, showing a net profit to the Bank of 80,000*l.* a year on the issue of 14,000,000*l.*, *Weguelin* 137-142——Explanation as to the sum of 120,000*l.*, plus 60,000*l.*, for exemption from stamp duty, as paid by the Bank for the privilege of issue, *Weguelin and Neave* 139. 341-348——The expenses of issue are about 160,000*l.* a year, *Weguelin* 139. 350-352——Fairness in estimating the gross profit upon issue at 3 per cent. on 14,000,000*l.*, *Weguelin* and *Neave* 353-357——The profit derived from the issue is generally much exaggerated, *Weguelin* 797-801. 806——The net profits of the Issue Department are 350,000*l.* a year, of which the State receives 250,000*l.*, and the Bank for its agency 100,000*l.*, *Hubbard* 2456.

Report, 1857—*continued.*

Issue Department (*Bank of England*)—continued.

5. *Profits of Issue: Arrangement with Government hereon*—continued.

Proposition that all profits arising from the issue of paper certificates or bank notes should be appropriated to the public exchequer, *Right Hon. Lord Overstone* 3648——The profit derived from paper issues may be considered as going to Government, the latter making a certain bargain with the Bank on the basis of that principle, *ib.* 3970–3972.

See also *Accounts* (*Bank of England*). *Central Bank of Issue. Claim of Depositors and of Noteholders. Government Issue. Interest on Loan. Rate of Interest. Reserve of Bullion* (*Issue Department*). *Reserve of Notes and Bullion* (*Banking Department*). *Separation of Issue and Banking Departments.*

Issues (*Generally*). *See Act* 7 *&* 8 *Vict. c.* 32. *Act* 8 *&* 9 *Vict. c.* 38. *Central Bank of Issue. Circulation. Country Banks. Discretionary Issue. Drains of Bullion and Monetary Pressures. Extension of Issue. Government Issue. Inconvertible Notes. Ireland. One Pound Notes. Rate of Interest. Reserve of Bullion* (*Issue Department*). *Restriction upon Issue. Scotland. Uniform Currency.*

J.

Joint Stock Banks. The joint stock banks in London allow interest on about 35,000,000 *l.* in deposits, *Weguelin* 538, 539——The interest allowed by the joint stock banks has not much affected the deposits in the Bank of England, but has impeded the operations in the Exchequer bill market, *ib.* 541–545——Reference to the gradual diminution previously to 1844 of from 8,000,000 *l.* to 4,000,000 *l.*, in the circulation of private banks, the circulation of joint stock banks having increased in a similar proportion, *ib.* 908. 920. 935.

Great importance of the operations of joint stock banks adverted to with reference to the expediency of an inquiry by the Committee into their management, *Hubbard* 2534–2539.

Reference to the large profits made by joint stock banks under the Act of 1844, *Twells* 4489——Doubt as to the means by which some of the joint stock banks make such large profits, *ib.* 4810–4818.

The joint stock banks have largely adopted the business of discount houses, so far as relates to the receipt of deposits, or money on call, *Chapman* 4943. 5097. 5210.

Comment by Mr. Weguelin, in letter of the 10th November 1856, on the small reserve of the joint stock banks of London; danger thereby, in the event of failure, to the credit of the country, *App, p.* 3, 4.

Return of the circulation of joint stock banks in England, Scotland and Ireland, in each month from September 1833 to April 1857, *App. p.* 148–152.

Account of the aggregate daily circulation of joint stock banks of issue in England and Wales from the 15th October 1844 to the 9th May 1857, *App. p.* 153–181.

Return showing the authorized issues of the notes of the joint stock banks in England and Wales, and the actual amount issued, and the amounts of bullion held by those banks in each week since the passing of the Acts of the 7 & 8 Vict. c. 32 and 8 & 9 Vict. c. 37 and 38, to the 9th May 1857, *App. p.* 182–203.

Account of the aggregate weekly circulation of bank notes in the United Kingdom, distinguishing those of the Bank of England in the hands of the public, and the issues of other banks in England, Scotland and Ireland, from the 19th October 1844 to the 9th May 1857, *App. p.* 214–232.

Return of the number of banks of issue and on non-issue which have been established in England and Wales in each year from 1819 to the present time, distinguishing joint stock banks from private banks; of the number which have relinquished business in each year, again distinguishing banks of issue and of non-issue, private banks and joint stock banks; and of the number which have relinquished business in consequence of failure and other causes, *App. p.* 234——Similar Return in regard to Scotland, *ib.* 235——Similar Return in regard to Ireland, *ib.* 237.

Account of the number of joint stock banks of issue in England at the time of passing the Act of 1844, and whose issues were fixed by that Act; also the number which still continue in existence as banks of issue, the number which have ceased to issue by compounding with the Bank to use Bank of England notes, and the number that have ceased by failing, *App. p.* 238.

See also *Country Banks.*

K.

Kent. Petition of private bankers and joint stock banks (issuers of their own notes), in the county of Kent, praying for an extension from four weeks to eight weeks of the period for striking their average circulation, *App. p.* 353, 354.

Report, 1857—*continued.*

Kerr, Charles James. Letter from Mr. Kerr, Manager of the Edinburgh and Glasgow Bank, to Sir G. C. Lewis, dated the 20th February 1857, offering several objections to the unequal operation of the Acts 7 & 8 Vict. c. 38, and 9 & 10 Vict. c. 75, and suggesting certain amendments therein, *App. p.* 338, 339.

L.

Lancashire Banks. Statement by the bankers of Lancashire, &c., praying to be put on the same footing as Scotch and Irish banks with regard to the issue of notes, *App. p.* 347. 354——Petition of these banks, praying for an extension of the time for striking the average of their circulation, *ib.* 354.

Lapsed Issues (Country Banks):

1. *Contemplation by the Act of* 1844 *that the Country Issues should entirely lapse.*
2. *Failure of the Compensation Clause providing for the abandonment of Issue.*
3. *Particulars as to the Banks whose Issues have lapsed.*
4. *Issue by the Bank of England to the extent of Two-thirds of the lapsed Issues.*
5. *Consideration whether the Bank should not fully replace the lapsed Issues.*
6. *Petition with reference to the continuance of Compensation.*

1. *Contemplation by the Act of* 1844 *that the Country Issues should entirely lapse:*

Evidence to the effect that Sir Robert Peel and the promoters of the Act of 1844 contemplated that the Act would lead to a gradual but complete absorption of the country issues in those of the Bank of England, *Weguelin* 166, 167. 184–188. 899. 912. 913. 941–945; *Newmarch* 1399–1402; *Hubbard* 2429; *Norman* 2939–2942. 3331–3334.

2. *Failure of the Compensation Clause providing for the abandonment of Issue:*

Statement showing that the compensation has not had the desired effect; that is, it has resulted in the abandonment of only between 800,000 *l.* and 900,000 *l.* of country issues, *Weguelin* 899, 900. 936–939. 944; *Hubbard* 2430–2432.

3. *Particulars as to the Banks whose Issues have lapsed:*

Return of any banks, being banks of issue previously to the passing of the Act 7 & 8 Vict. c. 32, which have ceased to issue their own notes, and the amount of the circulation of such banks respectively; showing the amount on which the Governor and Company of the Bank of England founded a memorial, dated the 26th November 1855, and in which permission was granted to them to add to their issue of notes, under the 5th section of the Act 7 & 8 Vict. c. 32, *App. p.* 88, 89.

Account of the number of private banks of issue in England at the time of passing the Act of 1844, and whose issues were fixed by that Act; also the number which still continue in existence as banks of issue, and showing what number have ceased to issue by compounding with the Bank to use Bank of England notes, and the number that have ceased by failing, *App. p.* 238——Similar account in regard to Scotland under the Act of 1845, *ib.*——Similar account in regard to Ireland, *ib.*

4. *Issue by the Bank of England to the extent of Two-thirds of the lapsed Issues:*

The issue to the extent of two-thirds was the result of an application made to Government, at the suggestion of the Chancellor of the Exchequer, *Weguelin* 598——Through the failure of several banks of issue since 1844, and the abandonment of issue by several banks, about 800,000 *l.* of notes have been partly replaced by the Bank of England, *ib.* 897, 898. 912——Substitution by Bank of England notes to the extent of two-thirds of the lapsed issues of private banks further adverted to, *Weguelin* and *Neave* 922–924.

Witness cannot trace any increase in the circulation of the Bank of England notes consequent upon the permission to issue at the extent of two-thirds of the lapsed circulation; the substitution in fact has been imperfect, *Weguelin* 925–928——With regard to the increased issue by the Bank of 475,000 *l.*, Government receives two per cent. from the Bank for such issues, *ib.* 1267.

Principle upon which the Act restricted the re-issue to two-thirds of the lapsed issue, *Hubbard* 2356——There has been no direct issue of Bank of England notes in consequence of the lapsed issues of any country bank, *ib.* 2697–2700.

Reference to the application by the Bank to Government to be allowed to issue to the extent of two-thirds of the lapsed country issues; witness was not a party to this application, *Norman* 3592–3598. 3631——Explanation that the application in regard to the issue by the Bank really emanated from the Government, *ib.* 3629–3632.

Report, 1857—*continued.*

Lapsed Issues (Country Banks)—continued.

5. *Consideration whether the Bank should not fully replace the lapsed Issues:*

The Bank should have been allowed to issue to the full extent of the lapsed issues instead of only to the extent of two-thirds, *Hubbard* 2354-2357. 2485——The full amount of the lapsed issues, namely, 712,500 *l.*, instead of two-thirds, namely, 475,000 *l.*, might have been re-issued by the Bank without any infraction of the principle of the Act, *ib.* 2485——Further reference to the propriety of substituting the Bank of England circulation to the full extent of the lapsed country circulation; belief that coin would not to any appreciable extent take the place of the lapsed issues, *ib.* 2540-2544. 2693.

Objection to the Bank being permitted to increase their issue to the full extent, instead of to the extent of two-thirds of the lapsed issue of country banks; this, however, is a very unimportant matter, *Norman* 2865-2870——Whether the Bank issue to the full or to the extent of two-thirds of the lapsed issues of country banks, is not a matter of the slightest consequence, *Right Hon. Lord Overstone* 3695. 4126.

Opinion of Mr. Hubbard, as stated in letter of October 1856, that unless the Bank issues on securities to an equal amount in substitution of lapsed or commuted country issues, the aggregate credit issue will be needlessly curtailed, *App. p.* 11-13.

6. *Petition with reference to the continuance of Compensation:*

Petition of bankers in the south of England with reference to compensation being continued for the relinquishment of issue, *App. p.* 352.

Latham, Alfred. Letter from Mr. Latham to the Governor of the Bank of England, dated 28th October 1856, in general approval of the Acts of 1844 and 1845, but suggesting certain amendments therein, *App. p.* 16, 17.

Leatham, Tew & Co. With regard to the provincial bank of Leatham, Tew & Co., with which witness was once connected, a condition that they should give security for their circulation would be injurious both to the public and themselves, *Newmarch* 1554-1560.

Leeds. Absence of increase in the circulation at Leeds during the speculation in the years 1842-45, *Newmarch* 1597-1602——Way in which the Leeds bankers obviated the inconvenience of the constant presentation of large cheques at their counters during the speculation in 1845, *ib.* 1603, 1604.

Leeds Branch (Bank of England). Account of the average circulation of twenty-one days' and seven days' bills in each year, from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days and other bills in each year, from 1848 to 1856, *ib.* 25.——Account of the average circulation of branch bank notes in each year, from 1832 to 1847, both inclusive, *App. p.* 26——Similar account for each year, from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days' bills during the year 1847, *App. p.* 28, 29——Similar statement during the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1857, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

Leeds Chamber of Commerce. Petition of the Chamber of Commerce of Leeds with reference to the constitution of the Committee, *App. p.* 353.

Legal Tender. The bank note should be a legal tender everywhere throughout the country, except by the issue department, *Right Hon. Lord Overstone* 3946-3951. 4150-4153.

So long as the amount of the legal tender varies with the amount of gold, there must be fluctuation in the rate of discount, *Twells* 4548-4557——Importance of a legal tender not liable to be exported, *Capps* 5445. 5451-5453. 5469-5472. 5480, 5481——Variation in the value of the legal tender in proportion to the supply and demand, *ib.* 5454, 5455.

Suggestion by Mr. Neave that the Bank of England note be made a legal tender throughout the kingdom, *App. p.* 5, 6.

Suggestion by Mr. Palmer that the circulating medium of Ireland and Scotland be assimilated to that of England, and that the Bank of England note be a legal tender throughout the kingdom, *App. p.* 6.

Advantage of making the Bank of England note a legal tender in Ireland and Scotland, adverted to by Mr. Hubbard, *App. p.* 13.

Recommendation by Mr. Norman that the system of legal tender be uniform for the three countries, *App. p.* 15.

Recommendation by Mr. H. W. Blake that the Bank of England note be made a legal tender throughout the United Kingdom, *App. p.* 18.

See also *Banking Department. Inconvertible Notes.*

Report, 1857—*continued.*

Leicester Branch (*Bank of England*). Account of the average circulation of twenty-one days' and seven days' bills in each of the years from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days' and other bills in each of the years from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year, from 1832 to 1847, both inclusive, *App. p.* 26——Similar account for each year, from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days' bills during the year 1847, *App. p.* 28, 29——Similar statement for the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

Liabilities (*Bank of England*). The liabilities of the Bank consist of the notes in the hands of the public, and of the deposits of the public in the Bank, *Weguelin* 627-629.

Account showing in detail the liabilities and means of the Bank, on the 28th of February and the 31st of August in each year, from 1778 to 1847, *App. p.* 90-92——Similar account for each year, from 1848 to 1856, *ib.* 93.

Amount of 41,459,940 *l.* as the total of the liabilities, and of the means, on the 28th of February 1857, *App.* p. 233.

See also *Accounts* (*Bank of England*). *Claims of Depositors and of Noteholders. Deposits* (*Bank of England*). *Issue Department*, 4.

Licences to Bankers. Return of amount of duty received for bankers' licences in each year, from 1833 to 1856, *App. p.* 308.

Light Gold. Previously to calling in the light gold, some twelve or thirteen years ago, it was ascertained that one-third of the sovereigns tendered at the Bank were light, *Weguelin* 117——When the light gold was called in, the Bank bought between 11,000,000 *l.* and 12,000,000 *l.* of gold, *ib.*——Light sovereigns are taken at the bullion price of 77 *s.* 9 *d.* the ounce, *ib.* 1249.

Light Silver. Practice of the Bank in regard to light silver; they do not lose by it, *Weguelin* 1245-1248.

Limited Liability. As regards the principle of limited liability, witness altogether disapproves of it, *Right Hon. Lord Overstone* 4133——The principle of limited liability being established, it is only consistent that it be extended to banks, *ib.* 4133-4135——If limited liability be extended to banks of issue it should be on the condition of their surrendering their issues, *ib.* 4134-4136——Limited liability as now applied to the Bank of England is a theoretical limitation, and cannot, by any reasonable supposition, come into practical effect, *ib.* 4154.

Lincoln and Lindsey Banking Company. Petition, signed on the part of this Bank, praying for certain alterations in the Act of 1844, *App. p.* 360, 361.

Liverpool Branch (*Bank of England*). Account of the average circulation of 21 days' and seven days' bills in each year, from 1832 to 1847, *App. p.* 24——Accounts of the average circulation of seven days' and other bills in each year, from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year, from 1832 to 1847, both inclusive, *App. p.* 26.——Similar account for each year, from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days' bills during the year 1847, *App. p.* 28, 29——Similar statement for the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

Liverpool Financial Reform Association. Petition of the Liverpool Financial Reform Association with reference to the constitution of the Committee, and praying that their investigations be searching, and that the inquiry be an open one, *App. p.* 355.

Loan Acts. With regard to the clause in each of the Loan Acts constituting the Bank a corporation until the loan is paid off, the natural inference therefrom is, that the Bank was intended to act as a trustee between the State and the public creditor so long as the national debt lasts, *Weguelin* 367-377——Consistently with the provisions of the Loan Acts the Bank might be stripped of all its privileges, save the management of the debt, *ib.* 382-384.

Lost Notes. Belief that the profit from lost or missing notes does not come to the credit of the issue department; it is about 6,000 *l.* a year, *Weguelin* 358.

Lyall, George. Letter from Mr. Lyall to the Governor of the Bank of England, dated 3d October 1856, in approval of the Acts of 1844 and 1855, *App. p.* 8.

Report, 1857—*continued.*

M.

M'Culloch, Mr. Quotation of the views of Mr. M'Culloch with reference to several crises before 1844, as showing his opinion as to the importance of restriction upon paper issues, *Right Hon. Lord Overstone* 4177. 4180. 4185.

Mackenzie, A. K. Letter from Mr. Mackenzie, Manager of the Commercial Bank of Scotland, to Sir G. C. Lewis, dated the 27th November 1856, in approval of the Act 8 & 9 Vict. c. 38, and deprecating any measure which would admit of excessive competition in Scotch banking, *App. p.* 330.

Malcomson, James. Letter from Mr. Malcomson to the Governor of the Bank of England, dated the 11th November 1856, in approval of the Act of 1844, but suggesting that the amount issuable on securities be raised to 16,000,000 *l.*, and that, as regards the Acts of 1845, there be an early withdrawal of all 1 *l.* and 2 *l.* notes, *App. p.* 19, 20.

Management and Direction (Bank of England):

1. *Duties devolving on the Management on the part of Government.*
2. *Consideration of the Principles which should characterize the Management.*
3. *Character of the Management previously to and under the Act of* 1844.
4. *Constitution of the Court of Directors considered.*

1. *Duties devolving on the Management on the part of Government:*

Enumeration of the duties discharged by the Bank of England as bankers to the Government, *Weguelin* 134-136. 143-156.——The Bank conduct the circulation, manage the public debt, aid in the collection of the revenue, and are, strictly, the private bankers of the Government, *ib.*——List of upwards of forty accounts kept for Government, *ib.* 155——Four divisions of the business of the Bank, *ib.* 335——The Government accept the returns made by the Bank of the actual expenses, *ib.* 365, 366——The issue of paper, and of almost all coined money, is now entirely performed by the Bank as agent for the Government, *Hubbard* 2453. 2463. 2473-2478.

2. *Consideration of the Principles which should characterize the Management:*

The position of the Bank towards the Government should, to some extent, be that of a private banker, *Weguelin* 159——Inexpediency of forcing upon the Bank a system of interest on, and investment of, deposits, *ib.* 159-161. 243-246——The arrangement with the Bank should, in fact, be a liberal one, *ib.* 161——Concurrence in the foregoing evidence, *Neave* 162.

Due consideration invariably given by the Bank to the interests of the public, as well as to the proprietors; the two interests are, in fact, identical, *Weguelin* 330-332——It probably would have been better from the first to have looked upon the Bank merely as an agent for the Government, *ib.* 378-380——The banking department should pay due attention to the issue department, as indicative of the state of the bullion reserve, *Weguelin* 620-626. 1164, 1165; *Hubbard* 2767.

Reasons why the Bank of England should be managed differently from other banking establishments, *Newmarch* 1359. 1363-1367. 1440.

Action of the Bank direction on the principle that in the management of the banking department they had nothing to consider but their interest as bankers, *Mill* 2032-2034. 2108——Since 1847 the Bank have not acted so entirely on the principle that they had nothing to consider but their own interests and safety, *ib.* 2032. 2109——Erroneousness of the principle in question, *ib.* 2032. 2071. 2108——The practice of the Bank to act as private bankers in the management of its reserve is not the necessary effect of the Act, *ib.* 2108, 2109——Further evidence as to the inexpediency of the Bank of England being managed in the same way as ordinary banks, that is, with a view to its own interests rather than the accommodation of the public, *ib.* 2228-2232. 2252-2255.

Limit of the action of the Bank to the management of its capital and deposits, that is, of its securities and reserve, *Hubbard* 2530-2533——The management of the banking department is totally distinct from any question relating to the active circulation, *ib.* 2766, 2767.

It is extremely important that the Bank should be governed upon public principles, and not with a view to the private aggrandisement of a corporation, *Chapman* 4974-4976.

Remarks by Mr. Thomson Hankey with reference to the proper principles to be followed, and the expediency of continuing the present functions of the Bank, *App. p.* 23.

3. *Character of the Management previously to and under the Act of* 1844:

Witness considers that the Bank has worked satisfactorily under the existing law, *Weguelin* 3 *et seq.*——The directors would have acted in the same manner if the Act had not been passed, *ib.* 5-7. 73, 74——The Act has worked well as regards the administration of the affairs of the Bank, *ib.* 214——The successful management of the Bank during

MANAGEMENT AND DIRECTION (BANK OF ENGLAND)—continued.

3. *Character of the Management, &c.*—continued.

during the last two or three years of pressure was not in any way a consequence of the Act of 1844, *Weguelin* 1217–1221——The same management of the pressure of 1847 as of the recent pressure would hardly have been followed by similar good results; the circumstances of the two periods were widely different, *ib.* 1218, 1219.

As regards the pressure in 1847, and the late pressure, the Bank took prompter measures on the latter occasion, *Neave* 1224——Progressive intelligence of the Bank direction, *Mill* 2075. 2131. 2198——Absence under the present law of any practical interference with the natural banking operations of the Bank, *Hubbard* 2351.

Erroneous doctrine held by the leading directors in regard to issues, when witness first entered the direction in 1821; the rate of interest, and the echéance of bills, were alone looked to, *Norman* 3364–3370. 3568–3574 —— In consequence of the pressure and disasters of 1825, sounder views began to prevail among the Bank direction, and Mr. Palmer, the then governor, devised a rule for the regulation of the issues and the securities, but it was found impracticable, *ib.* 3382–3388——Practice of the Bank in regard to issues, when witness joined the direction in 1821, further adverted to; doubt as to the directors having been induced to increase the issues in consequence of certain enactments by Lord Castlereagh in regard to their lending money upon mortgage, &c. *ib.* 3568–3580——Witness does not consider the expediency of restriction to be any impeachment of the constitution and action of the Bank management, *ib.* 3612–3624.

Firmer and more beneficial action of the Bank during the pressure of the last few years than in 1847, *Right Hon. Lord Overstone* 3996–4014——Remarks relative to the comparatively low rate of interest charged by the Bank during the earlier part of the drain of 1846-47, and in the spring of 1847, *ib.* 3996–4010*. 4064–4069 ——Witness remonstrated with several of the Bank directors for not raising the rate of interest sooner than they did, *ib.* 3996. 4065.

Evidence in detail showing the evils which resulted in the period from 1783 and 1844, through the absence of the present restrictions upon the Bank management, *Right Hon. Lord Overstone* 4173–4188.

Satisfactory operation of the Act of 1844, so far as the Bank of England are concerned, *Twells* 4505——On the whole, the machinery of the Bank is excellent, and the directors spare no expense in accommodating the public, *ib.* 4831.

As regards the present restrictions upon the issues of the Bank, the admirable management of the Bank has hitherto prevented any great evil therefrom, *Chapman* 4895, 4896 ——With regard to the management of the Bank in October 1847, the directors did everything in their power for the public, and even went beyond what could have been expected from them, considering the restriction upon their issues, *ib.* 5244——As regards the management by the Bank of the Government stocks, nothing can be better, *ib.* 5336.

Remarks by Mr. Neave upon the benefit to be derived in the future working of the Act from the experience of the crisis of 1847, *App. p.* 4, 5.

4. *Constitution of the Court of Directors considered:*

Practice in regard to the retirement of directors by rotation, *Weguelin* 446–450—— Approval of the present constitution of the Bank Court, save that the number of directors going out every year might be reduced from eight to six or four, *ib.* 451–460. 1237–1239——The court recently passed a resolution in favour of a reduction of the proportion of directors retiring annually, *ib.* 1260.

Reference to and approval of the suggestions of Mr. Tooke for a reform in the governing body of the Bank with a view to a greater permanency in the executive, *Newmarch* 1394–1398——Approval of Mr. Tooke's suggestion that there be a governor, sub-governor, and deputy governor, to be elected for three years, *ib.* 1395–1397——It is suggested that the three governors be re-eligible trienially, *ib.* 1395——Approval of Mr. Tooke's suggestion that twenty only of the directors be eligible for re-election, *ib.* 1395–1397——Objection to frequent change, as at present, in the executive of the Bank, *ib.* 1398.

As regards the constitution of the Bank management it would be an improvement if there were three governors, *Hubbard* 2516——It would also be an improvement if only four instead of eight directors went out by rotation, *ib.*—— The governor or deputy governor is supposed to attend at the Bank every day, *ib.* 2518, 2519——The directors meet every Thursday, *ib.* 2520——The Treasury Committee, consisting of those directors who have passed the chair, meet every Wednesday, *ib.* 2521–2523.

Objection by Mr. Cotton to so many of the directors going out by rotation, *App. p.* 7.

Recommendation by Mr. Masterman that the outgoing directors at every annual election be eligible for re-election, *App. p.* 10.

Report, 1857—*continued.*

Management and Direction (*Bank of England*)—continued.

4. *Constitution of the Court of Directors considered*—continued.

Minute of the Court of Directors of the Bank, dated 19 February 1857, relative to the provisions of the Act 8 & 9 Will. 3, regulating the election of directors; resolution of the court, that the governor be required to endeavour to obtain an alteration of the law, so as to allow five-sixths instead of two-thirds to be re-elected. *App. p.* 327.

See also *Accounts* (*Bank of England*). *Circulation. Deposits* (*Bank of England*). *Discretionary Issue. Government Accounts* (*Bank of England*). *Government Interposition. Issue Department. National Debt, Management of. Payment of Dividends. Rate of Interest. Reserve of Bullion* (*Issue Department*). *Reserve of Notes and Bullion* (*Banking Department*). *Restriction upon Issue. Securities* (*Bank of England*). *Separation of Issue and Banking Departments. Term of Bills. Usury Laws.*

Manchester Branch (*Bank of England*). Account of the average circulation of twenty-one days' and seven days' bills in each year from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days' and other bills in each year from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year from 1832 to 1847, both inclusive, *App. p.* 26——Similar accounts for each year from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days' and other bills during the year 1847, *App. p.* 28, 29——Similar statement for the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

Manufacturing Districts. Remarks on the circumstance of there being no local banks of issue in the manufacturing districts of Lancashire, such districts being adequately and satisfactorily provided for by the circulation of the Bank of England, *Right Hon. Lord Overstone* 3697-3703——Increased demand for capital in the manufacturing districts, *Chapman* 5124, 5225.

Masterman, Thomas. Letter from Mr. Masterman to the governor of the Bank of England, dated 20th October 1856, approving of the operation of the Act of 1844, save in times of domestic panic, and suggesting certain alterations therein, and in the Irish Act of 1845, *App. p.* 10.

Mercantile Community. See *Act 7 & 8 Vict. c.* 32. *Trade and Commerce.*

Metallic Currency. Advantage in the retail transactions of the country being carried on in coin rather than in paper, *Weguelin* 115——Object of a paper issue that coin and the capital of the country may be economised, *ib.* 645-647——Similar effect of a foreign drain upon the reserve of the Bank if the circulation were purely metallic instead of mixed, *ib.* 648-667——The only means of utilizing the coin in circulation, or of adding to the Bank reserve, would be by issuing paper to represent it, *ib.* 679, 701-705——The object of the Act of 1844 was to combine the security of a metallic circulation with the economy of a mixed circulation, *ib.* 1273, 1274.

The issuer of a metallic circulation would have no power in determining the amount, *Hubbard* 2655. 2657——Inexpediency of any limitation upon circulation if the currency were metallic, *ib.* 2655. 2657, 2658.

Main principle of the Act of 1844 to cause the Bank of England circulation to fluctuate as a metallic circulation would fluctuate, *Norman* 2861——Identical value and effect for home purposes of convertible notes as of coin, *ib.* 3113, 3114. 3117-3121. 3155. 3172——Practice as regards the issue or coining of gold, in the event of a purely metallic currency; there would be no competition, as the issue would not involve profit, *ib.* 3133-3143.

The great principle of the Act is to make the amount of paper money in the country conform in its variations to what would be the variations in the amount of a metallic currency, *Right Hon. Lord Overstone* 3646. 3811——Practicability of carrying on the commercial operations of the country if the paper circulation were withdrawn, *ib.* 3787-3790——Every note put out against bullion is in all principle a metallic circulation, *ib.* 3831.

Further statement that the predominant object of the Act of 1844 was to cause the issue department to put forth an amount of notes, which should fluctuate as the bullion in the department fluctuated, *Right Hon. Lord Overstone* 3959. 3962-3967——Sense in which it may be said that a bank note is a certificate of so much bullion, although the bullion deposited does not represent one-half the notes in circulation, *ib.* 4024-4028. 4220-4222.

The

Reports, 1857—*continued.*

Metallic Currency—continued.

The chief and great merit of the Act of 1844 consists in its placing the issue of the circulating medium upon a defined basis, *Chapman* 4969–4972. 5162. 5175.

Impracticability of carrying on the commerce of this country with a purely metallic currency, *Capps* 5498.

Approval by Mr. J. Malcomson of the operation of the Act in assimilating the currency to a metallic currency, *App. p.* 20.

See also *Circulation* (*Paper Currency*), IV. 3. 4. 5. *Gold. Silver.*

Mill, John Stuart. (Analysis of his Evidence.)—Is not practically acquainted with commercial matters, but has paid considerable attention to the operation of the Bank Act of 1844; 2010——Considers that there should be no restriction upon issue, save that of convertibility, 2011——The proposition of Mr. Tooke that the Bank should keep an average reserve of 12,000,000 *l.* in bullion, could not be enforced by law, 2012–2014——A restriction upon the rate of interest would be better than a restriction upon the amount of bullion; witness is not, however, prepared to recommend the former, 2015. 2070, 2071.

Sounder principle involved in Mr. Tooke's proposition than in the existing limit upon issue, 2016–2019——Beneficial operation of the Act in certain stages of a period of over-trading, but on such occasions only, 2020. 2030, 2031——Necessity of clearly distinguishing between the issue and banking departments in considering the effect of the Act upon the reserve of bullion, 2021, 2022. 2026——Doubt whether the operation of the Act has caused the larger reserve which the Bank has held since 1844; 2022–2026.

Mischievous operation of the Act in requiring for the sake of safety a larger reserve than the Bank has at times held, 2022. 2026. 2032–2034. 2292–2297——Main evil of the Act in providing against drains, as though they affected the issue department only, whereas, in truth, they act equally on the deposits, 2026 *et seq.*——Consideration of the separation of the issue and banking departments; peculiarly prejudicial course of action necessarily involved therein, 2026 *et seq.*

Effect of the separation of the departments in leading to more frequent and violent fluctuations in the rate of interest than was previously the case, 2026–2029. 2032–2038. 2068–2070. 2102–2119. 2247–2259——Necessity for the Bank, through the separation of the departments, to keep as large a reserve in each as previously sufficed for both, 2026, 2033, 2034. 2073. 2288–2291——Way in which the Act has operated usefully during the first stage in the progress of a revulsion of credit consequent upon over-speculation, 2031. 2104, 2105. 2194. 2304——Way in which it has acted mischievously during another stage, or when the revulsion has actually come, 2031. 2038. 2102. 2194.

Action of the Bank direction on the erroneous principle that in the management of the banking department they had nothing to consider but their interest as bankers, 2032–2034. 2108——Since 1847, the Bank have not acted so entirely on the principle that they had nothing to consider but their own interests and safety, 2032. 2109——Erroneousness of the principle in question, 2032. 2071. 2108——Practical and legal distinction between the issue and banking departments; obligation upon the Bank to abide thereby, 2033, 2034——Effect of a high rate of interest in this country and of a low price of securities in attracting capital from other countries, 2037, 2038. 2163–2184——Extent to which the Bank of England rate influences the rate of the money market; it does so materially in times of commercial difficulty, 2038. 2149–2151. 2258, 2259.

Opinion that it is of comparatively little consequence whether there is one or several banks of issue, 2039. 2247. 2055, 2056——Absence of advantage in abolishing country banks of issue in England, 2039–2042——Belief that there is no necessity for the present restriction upon country issues, or for their giving securities for their notes, 2043, 2044. 2271, 2272——Disapproval of an issue of notes under 5 *l.* in England, 2045, 2046. 2060, 2061. 2066, 2067——Probable profit to the Bank of England and to the public if there were but one bank of issue, 2047–2056. 2077–2081.

General disapproval of the Scotch and Irish Acts of 1845, as regards the limit upon circulation, 2057–2059——Approval of the circulation of 1 *l.* notes in Scotland, 2060——Question whether it is not expedient to stop the issue of 1 *l.* notes in Ireland, 2060–2065,

Recommended return to the provisions of the law as it was previously to 1844, with some understanding as to the amount of reserve that the Bank should keep, 2072–2075. 2185. 2186——Clear distinction necessary to be drawn between the character and effect of drains, inasmuch as when the drain is temporary or limited it is not essential or expedient to impose violent restrictions for the protection of the reserve, 2073, 2074. 2102–2106——Opportunities of the Bank for distinguishing between different drains, and regulating their action accordingly, 2073–2075. 2106. 2135–2137. 2195–2201——Belief that, from past experience, the Bank would act just as beneficially in cases of over-speculation if the present law were repealed, 2075. 2131. 2194–2201. 2304.

The effect of the sale of securities by the Bank in time of pressure would be the same as that of a refusal to make advances, 2076. 2151, 2152——Evidence relative to the

Report, 1857—*continued.*

Mill, John Stuart. (Analysis of his Evidence)—*continued.*

continued efflux of silver to India and China, to the extent of about 6,000,000 *l.* annually; different causes, 2082–2101. 2260–2270——If in time of extremity the issue department could assist the banking department, there need not be the same contraction of accommodation which is now so injurious, 2102–2105. 2120, 2121——The practice of the Bank to act as private bankers, in the management of its reserve, is not the necessary effect of the Act, 2108, 2109.

Similar constitution of the banks of Hamburgh and Amsterdam as of the Bank of England adverted to, in connexion with their means of accommodating the public, 2110–2118. 2138–2140——Slight and temporary effect of the large arrivals of gold upon the rate of interest, 2119——When a drain is limited it should be met by the bullion in reserve, rather than by violent restrictions upon credit, 2120, 2121. 2185, 2186——Circumstances connected with the drain of 1835, when, notwithstanding a severe reduction in the circulation, the Bank was obliged to borrow 2,000,000 *l.* from the Bank of France, 2122–2130. 2141–2147——Expediency of leaving cases of over-speculation to be dealt with at the discretion of the Bank, further adverted to, 2131–2134.

Larger amount of the Bank discounts when the rate of interest is high than when it is low, 2148——The securities of the Bank are not necessarily increased by a low rate of interest nor decreased by a high rate, 2149–2152——It does not follow that if the Act were not in existence a foreign drain would have the same effect upon the bullion as it now has, 2153–2158——In a quiescent state of trade the deposits in the Bank do not vary much in amount, 2159, 2160.

The inexpediency of the separation of the departments was illustrated in 1847, when the Bank was almost in danger of stopping payment, although there was between 6,000,000 *l.* and 7,000,000 *l.* of bullion in its coffers, 2187–2193——During an internal panic a very extended issue of notes would greatly relieve the public, and could not do any harm, 2190–2193——The general question of restriction upon issue should be left to the discretion and progressive intelligence of the Bank direction, without any reference to legislative enactment, 2193–2205.

Increased power of the Bank, since the repeal of the usury laws, to check a drain of bullion, 2202–2205——Large amount of bullion in the Bank in 1844, before the Act came into operation, 2206–2209——According to the principle of the Act, the credit circulation of the Bank should now be increased from 14,000,000 *l.* to 16,500,000 *l.*, or thereabout, 2210–2217——Absence of advantage or economy if, as in the case of the Hamburgh and Amsterdam banks, it were necessary that every note should be represented by bullion, 2218–2220——Inconvenience and increased risk of forgery if Bank of England notes supplied the place of country notes, 2221–2227.

Further evidence as to the inexpediency of the Bank of England being managed in the same way as ordinary banks, 2228–2232. 2252–2255——The deposits of the Bank of England, being the bulk of all the deposits in the country waiting for employment, constitute the fund drawn upon when bullion is being exported; question hereon as to the propriety of including in this operation deposits other than those of the London and country bankers, 2229–2246.

The probable effect of a continuance of the efflux of silver to the East will be to make gold the standard in countries whose standard is now silver, 2269, 2270——Way in which the proposition (not advocated by witness) that country banks should deposit public securities for their issues might be carried into practice, 2273–2282——Witness considers that the whole theory of the Act of 1844 is erroneous, and that the Act should be repealed, 2283–2285——Inattention to the management of the deposits, more especially up to 1847, is one of the more erroneous and injurious consequences of the Act, 2283, 2284. 2317, 2318.

Opinion that the convertibility of the note would be just as safe without the Act, 2286, 2287——A suspension of payment, which is a greater evil than inconvertibility, is much more possible under the Act than it was before, 2287——The effect of the Act as causing the circulation to fluctuate like a purely metallic circulation is not of any consequence, 2293, 2294——A convertible and unrestricted paper curreney of the permanent value of a metallic currency would not be liable to the same fluctuation as the latter, and would admit of greater accommodation to the public, 2295–2298. 2302, 2303.

Further evidence in favour of a great extension of issue on occasions of internal drain or panic, 2299–2306. 2312——A general alarm as to the security of the note is too remote a contingency to constitute an argument against extended issues, 2305, 2306——Foreign drains need not, if limited, be met by a restriction of discounts such as occurs under the present Act, 2307–2310——Prevention of the natural action of the Bank by the restriction upon its issues, 2311, 2312——Effect of over-issues; belief that there cannot be an over-issue so long as convertibility is maintained, 2313–2316.

Monetary Pressures. See *Drains of Bullion and Monetary Pressures.*

Money. Distinction between capital and money; the latter is, in fact, merely a means of obtaining the former, *Right Hon. Lord Overstone*, 3720, 3721. 3756–3759——Further reference

Money—continued.

reference to the distinction between money and capital; definition of the former, *Right Hon. Lord Overstone* 3817-3819. 4023.

Want of money, rather than of capital, by the commercial classes in the pressures of 1825 and 1847, *Twells* 4579-4583.

Money Dealers. Definition of the business of witness's house as lying in the employment of the loose banking money of the country, *Chapman* 5296-5299.

Money Market. Estimate that the amount of funds constantly employed in the London money market is about 120,000,000*l.*, of which something like 20 per cent. is wielded by the Bank of England, *Newmarch* 1889.

Monopoly in Banking. See *Banking Operations. Country Banks*, IV.

Morris, James. Statement by Mr. Morris, dated 3d October 1856, in approval of the Act of 1844, *App. p.* 8.

Mortgages. Slight extent to which the Bank now lend money upon mortgage or inconvertible securities, *Norman* 3581-3588.

Mutiny Act. Reference to the Mutiny Act, and other Acts, as, though passed for a limited period, being, like the Bank Charter Act, intended for continuance, *Right Hon. Lord Overstone* 4196. 4213-4215.

N.

National Bank of Ireland. Recent run upon the deposits in the National Bank of Ireland adverted to; some of the branches were entirely drained of gold before the panic ceased, *Weguelin* 697-700.

National Bank of Scotland. General approval by the National Bank of Scotland of the Act of 1845, which, however, they think might be revised so as to extend the authorised issues of Scotch banks, *App. p.* 331.

Particulars as to the amount of capital, &c., and of the authorised and actual circulation in April 1857, *App. p.* 333.

National Debt, Management of. For the management of the debt the Bank of England receive 450*l.* per million up to 600,000,000*l.*, and beyond that amount 300*l.* per million; profit hereon of about 124,000*l.*, *Weguelin* 141, 142——The money contract as to the price to be paid to the Bank by the public rests upon the same permanent foundation as the incorporation of the Bank, *ib.* 381——Belief that no public body in the country could undertake the management of the national debt with the same security and advantages as are possessed by the Bank of England, *ib.* 432-437——The Bank is paid at the usual rate for the increase of the debt through the Russian war, *ib.* 617-619.

See also *Loan Acts.*

Natural Regulation of the Currency. The Act of 1844 operates by natural, and not by artificial causes, *Norman* 3454-3457. 3516. 3589-3591——Explanation of the term "natural laws," as now applied to the regulation of the currency, *ib.* 3633, 3634.

Neave, Sheffield. Statement by Mr. Neave in approval of the Act of 1844; consideration and disapproval of sundry alterations suggested therein, *App. p.* 4-6.

Newcastle Branch (*Bank of England*). Account of the average circulation of twenty-one days' and seven days' bills, in each year from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days' and other bills, in each of the years 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year, from 1832 to 1847, both inclusive, *App. p.* 26——Similar account for each year, from 1847 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days' bills during the year 1847, *App. p.* 28, 29—— Similar statement during the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

Newmarch, William. (Analysis of his Evidence.)—Has been secretary for six years to the Globe Insurance Office; had considerable experience previously in banking transactions, 1335-1338——Has been associated with Mr. Tooke in the preparation of the latest volumes of his work on prices, and concurs generally with the views expressed by Mr. Tooke, 1339-1341. 1368-1411——Has paid considerable attention to the effect of the Act of 1844, 1340.

Report, 1857—*continued.*

Newmarch, William. (Analysis of his Evidence)—*continued.*

Absence of any power in the Bank of England or other banks of issue to determine the amount of their outstanding circulation, 1342. 1409, 1410——Argument in favour of the removal of all legislative limit upon the issues of the Bank of England, 1343-1354. 1541-1547——Disapproval of a certain amount of bullion being specially set aside as a guarantee for the circulation, 1344-1347——The legal convertibility of the note is a sufficient security against over-issue, 1345.

The larger bullion reserves of the Bank since 1844 are attributable to the influx of gold from Australia, &c., and not to the operation of the Bank Charter Act, 1348-1354. 1427-1429. 1508, 1509——As regards the separation of the Issue and Banking Departments there was, scientifically, no sufficient reason for it, 1355, 1356——In practice the separation has operated mischievously, as producing undue fluctuations in the rate of interest, 1356-1360. 1363-1367. 1431-1440. 1463-1471——The cutting in two of the reserve of bullion, as a consequence of the separation of the departments, forms one of witness's main objections to the Act, 1356 *et seq.*

Evils consequent upon frequent fluctuations on the rate of interest, as has been the case since 1844; 1357-1360. 1430-1440. 1472-1480——Inexpediency of the Bank of England being guided by the same principle as ordinary bankers in the management of its reserve, with reference to the rate of discount, 1359. 1363-1367. 1440——Comment on the reduction, since 1844, of the Bank rate to so low a point as 2 per cent., 1359, 1360. 1363. 1366. 1463-1471——Evidence in favour of the adoption by the Bank of a rule not to discount at a lower rate than 4 per cent., 1360-1362. 1440-1458. 1494-1497——Circumstance of the Bank having never discounted at a lower rate than 4 per cent. previously to 1844; 1361. 1450-1454. 1527.

Reasons why the Bank of England should be managed differently from other banking establishments, 1364——Concurrence in Mr. Tooke's view, that the Bank should hold a reserve in bullion of not less than 10,000,000 *l.* or 12,000,000 *l.*, to be determined upon the principle of an average of years, 1368-1392——An arrangement for a larger average store of bullion, as proposed by Mr. Tooke, should involve compensation to the Bank, 1369. 1382. 1489——Advantage of an arrangement like the foregoing being settled between the Government and the Bank, and not defined by Act of Parliament, 1368. 1378-1392.

The Bank should not be required to keep any amount of securities specifically pledged against any particular part of their liability, 1370——An adverse foreign exchange may almost always be corrected by the transmission of 3,000,000 *l.* or 4,000,000 *l.* of treasure, 1373. 1494. 1498-1507.

Disapproval of empowering the Government to allow the Bank, under peculiar circumstances, to issue notes in excess of the present limit, 1384, 1385——Objection to the Executive Government interfering with the administration of the Bank oftener than is positively necessary, 1386-1392——Witness does not consider it desirable that the issues of the Bank should be matter for legislation, 1393.

Reference to and approval of the suggestions of Mr. Tooke for a reform in the governing body of the Bank with a view to greater permanency in the executive, 1394-1398——Objection to frequent change, as at present, in the executive of the Bank, 1398——Comment on the practice in determining the rate of interest, *ib.*

The composition clause of the Act of 1844 was evidently intended as a means of superseding the country bank circulation, 1399-1402——Witness sees no reason why the circulation of country bankers should be extinguished, 1403, 1533, 1534——Expense to the Bank of England if it had to replace the circulation of all country banks of issue, 1403-1408——Approval of a removal of the restrictions imposed in 1844 and 1845 upon the circulation of country banks, 1411-1413——Objections to requiring security from country issuers, 1413-1416. 1528-1532.

There is in principle no reason why the banks of Scotland and Ireland should not equally with the English banks be released from the restrictions now imposed upon their circulation, 1417. 1517, 1518——Reasons in favour of a continuance of the small-note circulation in Ireland and Scotland, 1418, 1419——Absence of reason for introducing 1 *l.* notes into England, 1419, 1420——Liability to forgery of 1 *l.* notes in this country, 1421.

As the result of laborious investigation on the part of witness, he states that the amount of the issues of paper does not exercise the least influence upon prices, 1422, 1423.

Witness has made careful inquiries as to the amount of gold in circulation, and concludes that at the close of 1856 there was as much as 70,000,000 *l.* in circulation in the United Kingdom, and that not less than 20,000,000 *l.* of this is owing to the influx of gold from Australia and California, 1425.

As regards the variations in the amount of the circulation of bank notes and of bills of exchange, witness has investigated the matter, and finds that there is no connexion between the two, but that the bill circulation increases as the rate of discount rises; tabular statement hereon, laid before the Committee, 1426, and *App. p.* 324-327.

In

Report, 1857—*continued.*

Newmarch, William. (Analysis of his Evidence)—*continued.*

In principle it is quite expedient that as the bullion in the Bank decreases, the rate of interest should be raised, 1434-1437. 1459——It is inexpedient, however, that the Bank should ever reduce its rate very low, notwithstanding that its reserve of bullion may be very large, 1438-1447——Under certain conditions only of the money market does the Bank influence the rate of interest, and then only temporarily, 1440. 1460-1462——Different modes in which the Bank might employ its money, even at a lower rate than four per cent., without lending it on bills of exchange at such lower rate, 1448-1458. 1526, 1527.

A limit upon the terms of bills discounted by the Bank has at times a more severe effect than a rise in the rate of interest, 1481——Bills would probably be drawn at the usance required by the Bank if capital could not otherwise be raised, 1482-1485——Further statement, that the Government should not interfere with the discretion of the Bank in regard to the use of its reserve, 1486-1488, 1541-1547——The amount of bullion which witness suggests that the Bank should hold would form a portion of the assets, and would be a guarantee equally for the deposits and the circulation, 1490-1493.

The maintenance of a certain amount of bullion in proportion to the total liabilities, might be effected by the Bank not reducing its rate of interest below a certain point, such as four per cent.; explanation hereon, 1494-1507——As a general rule, the Bank may be said to be passive in regard to any decrease or increase of the bullion reserve, 1497——Effect of the state of our eastern trade and of the Indian railways, &c., in drawing treasure from this country, 1499-1507——Relief evidently given to the Bank by the arrival of Australian gold, 1508, 1509.

Circumstances which render a limitation upon the Bank issues less objectionable at the present time than in 1844; 1510-1512——Increase of the small-note circulation in Ireland and Scotland under certain conditions of trade, 1514, 1515——Further objection to the circulation of small notes in England, 1516——A limitation of the credit circulation in Ireland or Scotland is not more necessary than if the notes were all of a higher denomination, 1517, 1518.

Reasons for the increase in the circulation of bills of exchange when the rate of discount rises, 1519-1525——Anticipated increase of forgery if the country issues were entirely replaced by Bank of England notes, 1535-1540——Further remarks on the evil consequent upon the Bank having command over only one-half of the bullion in its coffers, 1541-1547——Sound discretion is far wiser than mechanical action as a basis of management, 1545-1547——An extension of the credit circulation would be better than no alteration at all, 1548-1552——Claim of the Bank to additional compensation if they be restricted in regard to the rate of interest, 1553.

[Second Examination.] With regard to the provincial bank of Leatham, Tew & Co., with which witness was once connected, a condition that they should give security for their circulation would be injurious both to the public and themselves, 1554-1560——Although securities, if given by country bankers, would consist of investments bearing interest, it would, nevertheless, be disadvantageous to the banks of circulation to give such securities, 1561-1580——The great operations of credit throughout the country districts are performed by bills of exchange taken out of the banker's portfolio, and endorsed by him, and not by the actual circulation of country notes; advantages of this system, 1569-1579.

Tendency to a monopoly of banking business in country towns where circulating banks are established, 1580-1592——Advantage to the public where there is competition between the local banks, 1580-1582——Doubt as to there being any instance of a bank of circulation, and a bank merely of deposit in the same town; banks at Bristol adverted to hereon, 1586-1590——Further evidence to the effect that neither the Bank of England nor country banks have power to increase their circulation, 1593 *et seq.* 1690-1694. 1819 *et seq.* 1964.

During the speculation of 1845 the fluctuations in banking matters were just the same as if the circulation had been purely metallic, 1605-1612. 1694——A competition between local banks of issue tends to diminish rather than to increase the circulation, 1613-1615——Increased employment of capital, and at lower terms, in the event of reckless advances by competing banks, 1616-1622. 1635-1639——Failure of the northern and central bank adverted to as having arisen from the nature of its advances of capital; while these advances were very large, its note circulation was comparatively small, 1616. 1623-1628.

But for the check of the convertibility of the Bank of England note, there would not be so much difficulty in affecting the amount of the circulation, 1629-1631——Absence of any depreciation in a note so long as it is convertible, whilst with inconvertibility depreciation may take place to any extent, 1632-1634——Temporary effect upon prices by undue advances of capital producing speculation, 1635-1639——Equal tendency of banks of non-issue as of banks of issue to promote speculation as shown by the operation of the London banks during the speculation in 1825; 1639-1646.

Report, 1857—*continued.*

Newmarch, William. (Analysis of his Evidence)—*continued.*

Argument that the circulation and deposits equally constitute the liabilities of the Bank of England, and that it is essential to deal with them as a whole, in regard to the amount of reserve to be provided, 1647 *et seq.*——Greater fluctuations in the deposits than in the circulation of a bank, 1649–1653——Regularity of the variation in the circulation in ordinary times, 1650, 1651——The primary duty of the Bank of England and other banks should be to provide that all their obligations might be payable on demand in the sterling coin of the realm, 1658–1664.. 1851–1854.

As regards the amount of the Bank reserve, it is extremely impolitic to regulate it by Act of Parliament rather by the discretion of the Bank, 1662–1679——The deposits of the Bank really require more careful watching, and more ample safeguard, than the circulation, 1670–1672. —— Inference from the absence of legislative limit upon the reserves, or the issues of the Bank of France, 1674–1679.

Consideration of the present form of account published weekly by the Bank of England; concurrence in the views of Mr. Wilson as to the deceptive character of the account in its leading particulars, 1680–1698——The notes issued from the Issue Department to the Banking Department are clearly not a liability on the part of the Bank, as not being in the hands of the public, 1685, 1686——It is a delusion to suppose that the Bank could increase and make use of the quantity of notes, and thereby relieve the public, 1688–1694.

Safety in allowing the reserve to go lower when there is an internal drain of bullion than when there is a foreign drain, 1699–1701——Three categories into which all foreign drains resolve themselves, 1702——As regards the foreign drain in 1847, in consequence of the bad harvest in 1846, it was out of the power of the Bank to prevent it, 1703—— With respect to the drain from this country to France, it can only take place in exchange for silver, or something else, 1704, 1705. 1905, 1906——Temporary character of the expedients adopted by the Bank of France for keeping up its reserve of bullion, 1705–1715.

Further statement in support of the opinion that the larger reserve of bullion in the Bank at different periods since 1844, is not owing to the Act of that year, 1716–1726 ——Remarks on the circumstance of 17,580,000 *l.* in gold having been sent to the branches of the Bank of England in the years 1850–55, whilst apparently a very small amount has returned to the Bank in London, 1727–1736——Explanation as to the great increase of late years in the gold circulation, whilst the note circulation has continued nearly uniform, 1737–1751.

The total note circulation of the United Kingdom in 1834 was 37,500,000 *l.*; in 1844, 38,340,000 *l.*; and in 1855, 39,000,000 *l.*; 1741–1745——Absence of economy in the gold circulation, which now amounts to about 70,000,000 *l.*, by the Act of 1844; 1748–1751——Average note circulation of Scotland and Ireland in different years since 1844; increase in the notes of small denomination, 1752–1760——Further evidence in approval of 1 *l.* notes in Scotland and Ireland, but in disapproval of their introduction into England, 1761–1785.

Grounds for concluding that the exchanges with India are in favour of this country, notwithstanding the large amount of bullion being continually transmitted to the east, 1786–1789——To the amount of the exports from this country to India is to be added the amount of India House drafts, that is, the funds drawn from India by the East India Company; explanation hereon, showing how these drafts can be said to balance a corresponding amount of imports, 1786. 1915–1925.

Large sums leaving this country, in treasure or material, on account of the Indian railways, further adverted to, 1790——Examination on the question whether the transfer of 6,000,000 *l.* of capital from this country to India, in the shape of iron and locomotives, has an equal effect upon the exchanges as though it were sent in coin, 1791–1804. 1927–1938.

Circumstance of there having been a considerable increase in the country circulation in the years 1834–36; 1805–1818——Way in which the convertibility of the note controls the issues, or rather the advances, of the Bank, 1823–1850——Respect in which, if the note were inconvertible, there would not be the same control upon the issuer as now exists, 1829–1843.

Witness further argues that the Act of 1844, by the separation of the Issue and Banking Departments, and the cutting in two of the bullion reserve, has debarred the public from the advantage of the whole of the resources of the Bank, 1855–1857. 1869–1878——Means of a country bank of issue for increasing the accommodation to its customers, in the event of its having reached the full amount of its limited issue, 1858–1865 ——The issues of country bankers are to a great extent so much capital in their hands, 1865–1868.

The notes in the Banking Department of the Bank of England should be considered as equivalent to so much gold, 1873, 1874——An amalgamation of the Banking and Issue Departments, as before 1844, would be a consummation of witness's views, 1877 ——As

Report, 1857—*continued*.

Newmarch, William. (Analysis of his Evidence)—*continued*.

——As regards the Bank rate of interest, witness further contends that the Act has had a most injurious effect, inasmuch as under it the Bank has thought fit to compete with other money-lenders, and has, temporarily, no doubt, caused violent and irregular changes in the rate, 1879–1884. 1895, 1896.

Further evidence in favour of the Bank being restrained, but not by Act of Parliament, from discounting at less than four per cent.; objections to this proposition considered, 1880. 1885–1904 —— Magnitude of the Bank's resources, and moral influence of its actions, adverted to as an argument against its lending its reserve, in the same way as other money-lenders, 1889–1894——Expediency of compensation to the Bank for not discounting at less than four per cent., 1901–1903.

Increase, on the whole, in the reserve of bullion in 1855 and 1856 as compared with 1843 and 1844; 1907–1911——The only rule which should exist in regard to the issue of bank notes, is the demand of the public, 1912–1913——Though there is no difference in principle between a 5 *l.* note and a 1 *l.* note, witness further objects to the use of the latter in England, 1914——Question as to the effect of the transmission of warlike stores to the Crimea upon the state of the foreign exchanges, 1928–1938.

Further examination as to the issue respectively of convertible and inconvertible notes, to the effect that in the latter case there is not the same practical limit upon the issue, 1939–1963——Issue of inconvertible notes by governments only, 1946–1951——Possibility of an inconvertible circulation without its becoming suddenly excessive, 1954. 1957–1960——Probable amount of the gold circulation in 1834 and in 1844; 1965–1967.

Examination on a paper which shows that, in the 10 years preceding 1844, the variations in the rates of interest allowed by London discount houses to London bankers were 43 in number, and in the 10 years succeeding 1844 were only 20 in number; the variations since 1844 have, however, been much greater in amount, 1968–1977.

Variation in the exchangeable value of gold, as a commodity, according to the supply and demand, 1978–1992——Absence, practically, of any effect upon prices, by oscillations in the amount of bullion in the country, in consequence of the foreign exchanges, 1979–1999——The present mixed circulation acts in just the same way as a metallic circulation, 1986——By "circulation" witness means those notes actually in the hands of the public, 2000–2003——The notes in the Banking Department he always looks upon as constituting the bullion reserve, 2004.

Further statement as to the expediency of dealing similarly with the deposits and the notes of the Bank of England, 2005–2009——In regard to the liability of the Bank for its notes, the question of legal tender should not be considered as affecting the matter, 2008.

Norman, George Warde. (Analysis of his Evidence).—Has, with the exception of some short intervals, been 36 years in the Bank direction, 2855, 2856——Gave evidence before the Select Committee in 1840, whose inquiries had reference to the Act of 1844; thoroughly approves of that Act, 2857–2860——Main principle of the Act of 1844 to cause the Bank of England circulation to fluctuate as a metallic circulation would fluctuate, 2861——Main provision of the Act that only a certain amount of the circulation of the Bank should be issued on securities, and that all the notes beyond such amount should be issued upon gold, 2862, 2863.

Grounds upon which the limit of 14,000,000 *l.*, as the issue upon securities, was arrived at, 2864——Objection to the Bank being permitted to increase their issue to the full extent, instead of to the extent of two-thirds of the lapsed issue of country banks; this, however, is a very unimportant matter, 2865–2870——Objection to raising the limit from 14,000,000 *l.* to 16,000,000 *l.*; the effect would be to diminish *pro tanto* the bullion reserve of the Issue Department without increasing the quantity of notes in the hands of the public, 2871–2876.

Belief that the larger bullion reserve of the Bank since 1844 has been mainly owing to the Act of that year, 2877–2887——Approval of the separation of the Issue and the Banking Departments by the Act of 1844, on the ground that it is mischievous to place the issue of paper money in the hands of persons who carry on ordinary banking business, 2888–2893——Argument that the principle of competition cannot be applied without mischief to the issue of paper money; the mere convertibility of the note is not, in fact, a sufficient security against over-issue, 2894–2920.

Extent to which it may be in the power of bankers, by excessive issues of paper, to affect the price of gold, or rather to depreciate the whole currency, 2903–2908——Largely increased issues of private banks between 1834 and 1836; 2908——Reference to the immense increase of paper issue in the United States before the crash of 1837, and to the fall in the price of gold, and the value of commodities, 2908–2917——Wide distinction between the position of a depositor and of a noteholder adverted to as an argument against applying legislative action to deposits, 2921–2929——Witness can hardly conceive

Report, 1857—*continued.*

Norman, George Warde. (Analysis of his Evidence)—*continued.*

it possible to add to the circulation by issuing inconvertible notes; comparative worthlessness of such notes, 2930–2937.

Doubt as to the expediency of doing away with all issues save the issue by the Bank of England, 2938. 2943——Probability of the Act of 1844 having contemplated the gradual absorption of the country issues, 2939–2942 ——Improved action of the country issues since 1844; 2943, 2944——Country banks of issue should remain on their present footing, new banks of issue being prohibited, 2945–2952——Objections to the power of issue being transferred from the Bank of England, and exercised directly by Government, 2953–2963.

Denial that the separation of the Banking and Issue Departments has had any effect in regard to fluctuations in the rate of discount, 2964. 2968–2977. 3005–3007 ——The Banking Department of the Bank of England is, as regards the payment of bank notes, precisely in the same position as a private bank, 2964–2967. 2988–2993——The bullion in the Specie Department is no more applicable to the payment of notes in the Banking Department than it is to the payment of any other bank notes, 2965——Belief that Bank of England notes are a legal tender in the Banking Department, 2966, 2967——Except under very partial and peculiar circumstances, the Bank has no power at all over the rate of discount, 2971–2975. 3000–3004 —— Disapproval of the Bank being limited to a minimum rate of discount of 4 per cent., 2978.

Absence of any diminution in the power of the Bank to accommodate the public since the Act of 1844, 2979–2981 —— Approval of the form in which the accounts of the Bank are now published, 2982–2987——Greater demand upon the Bank for discount when the rate is high than when it is low, 2994–2997——Absence of any close relation between the rate of discount and the rate of interest upon Government securities, 2998, 2999—— Further statement as to country bankers or issuers having for a time the power of keeping out an over-circulation of notes, 3008–3012.

Examination in further consideration and approval of the credit circulation being still fixed at 14,000,000 *l.*, although, in point of fact, the minimum active circulation of the Bank since the Act of 1844 may not have fallen below 16,500,000 *l.*; further argument that an increased issue of 2,000,000 *l.* on securities would merely result in there being 2,000,000 *l.* less of gold in reserve, 3013–3029. 3060–3094.

Doubt as to any inconvenience being felt, after a time, by the withdrawal of the local notes of country banks, 3030–3036——Further objection to any interference with the country banks which should in any way increase their amount of issues, 3037–3041—— Further reference to the great depreciation some years ago in the currency of the United States in consequence partly of an excess of paper circulation, 3042–3049. 3202, 3203 ——Action upon prices in the event of excess of issue, whether under a mixed currency, or a metallic currency, 3050, 3051

Anticipated equal value of a limited issue of 14,000,000 *l.* in inconvertible notes as of 14,000,000 *l.* in metallic currency, 3052–3059——Advantage to the Bank if empowered to issue 2,000,000 *l.* more than it now issues upon securities, 3084–3094——Explanation of the term "circulation," as before the Act of 1844, 3095–3098 ——Preparation, previously to 1844, for the private convenience of the Bank Directors, of an account similar to that now published, 3099–3101——Belief as to the Act of 1844 giving to the noteholder a special lien upon the securities and the bullion, 3102–3106.

Further statement as to the separation of the departments having reference to the difference between the business of issue and of ordinary banking, 3106–3112——Identical value and effect for home purposes of convertible notes as of coin, 3113, 3114. 3117–3121. 3156. 3172——Further evidence in support of the proposition that there should be no competition as regards issuing banks, on the ground that for a certain time and under certain circumstances a mixed currency may be maintained to a greater amount than a metallic currency could be maintained, 3115 *et seq.*

Probability of a worse currency if there are competing issuers than if there is a single issuer, 3132——Practice as regards the issue or coining of gold in the event of a purely metallic currency; there would be no competition, as the issue would not involve profit, 3133–3143——Profit involved in the issue of notes, and consequent competition if there were no legislative restriction, 3143–3150——Higher prices would partly be the effect and partly the cause of a temporary over-circulation of paper, 3152–3154. 3171.

Further statement as to a mixed convertible currency being depreciated in comparison with the currency of other countries if such mixed currency be maintained for a time at a higher amount than a purely metallic currency could be maintained, 3156–3178——Further consideration of the large increase between 1834 and 1836 in the issues of country bankers; large decrease during the same period in the circulation and the bullion of the Bank of England; inference nevertheless as to a power in issuers to maintain a somewhat increased circulation for a certain time, 3179–3201——Bankers can by no means increase their issues indefinitely; the test of convertibility is quite sufficient to prevent any such increase, 3196.

[Second

Report, 1857—*continued.*

Norman, George Warde. (Analysis of his Evidence)—*continued.*

[Second Examination.]—It was generally held before the passing of the Act of 1844, that in proportion as bullion was withdrawn from the country, the internal currency should be contracted, 3204——Impression that since 1844 the notes in the hands of the public have diminished during adverse exchanges; reference hereon to a certain return, showing a contrary result, 3205-3208—— In the case of a purely metallic currency, and equally in the case of a mixed currency, witness would consider the bullion reserve in the Bank as part of the currency or "money" of the country, 3209-3216.

Effect of a continued adverse exchange to lead to a reduction of prices, and *pari passu* to diminish the coin in the hands of the public, 3217-3221—— Further approval of the present form of accounts of the Bank, as the best form for representing the real condition of the currency, 3222, 3223——In the old form of account, the circulation of the Bank, as published, showed only the notes in the hands of the public, such notes constituting the only liabilities of the Bank in regard to its circulation, 3224-3227.

Examination to the effect that the notes in the Banking Department represent a similar amount in bullion in the Issue Department, but only in the same way that notes in the hands of any private banker represent a portion of the bullion in the Issue Department, 3228-3255. 3547-3550——Equal liability of the Issue Department in regard to the notes in the Banking Department and the notes in the hands of ordinary bankers; how far this proposition is affected by the fact of the two departments constituting one corporate body, 3229. 3256-3285. 3358-3360.

The Banking Department must give value for its notes in the same way as ordinary bankers, 3260-3262. 3547-3550——The Bank, or rather the Issue Department, derives a profit from the notes in the hands of the public, but not from the notes in the Banking Department, 3263-3268——Notes are a legal tender, not only in the case of ordinary bankers, but of the Banking Department, the Issue Department being liable in each case for payment of the notes in gold, 3269-3285.

Further statement as to the power of banks of issue to extend or contract their circulation under certain circumstances, 3286-3291——Further statement as to the effect of an increase of issues by issuing banks or the Bank of England in leading to a depreciation of the aggregate currency, and a probable export of gold, 3291-3303——Further statement as to the motive of country bankers to increase their issues; check to over-issue if they were obliged to issue Bank of England notes, first giving proper security for them, 3304-3317. 3335-3340.

Full security under the Act of 1844 for the convertibility of the notes of the Bank of England, or about one-half of the entire circulation, 3318-3321——Defect of the Act of 1844 in not prescribing that security shall be taken for the country issues, 3322-3357 ——Witness has always held the doctrine that no bank should be allowed to issue without giving security, 3325. 3330. 3356, 3357—— Further opinion that the liabilities of a banker in regard to his circulation should be preserved in a greater degree than in regard to his deposits, 3326-3330.

Impression, further stated, that Sir Robert Peel looked forward to a diminution, and probably an ultimate extinction of the country issues: question put by him to witness on examination before the Select Committee in 1840 adverted to hereon, 3331-3334—— Belief as to there having been less insolvency among country banks of issue since the Act of 1844; 3343, 3344. 3356——Extent to which the privileges of issuing banks under the Act may have prevented issues being undertaken by a sounder class of banks, or may by failure have inflicted actual loss which but for the Act would have been avoided, 3345-3356.

Witness is the oldest bank director, his experience dating from 1821, 3361-3363—— Erroneous doctrine held by the leading directors in regard to issues when witness first entered the direction; the rate of interest and the échéance of bills were alone looked to, 3364-3370. 3568-3574——Except in 1817, when a partial payment of notes in gold took place, the actual resumption of cash payments did not fall upon the Bank until about 1821; 3370-3372——Crisis of 1825 adverted to as having been largely aggravated by the increase of country issues and the issues of the Bank of England, 3373-3381.

In consequence of the pressure and disaster of 1825, sounder views began to prevail among the Bank direction, and Mr. Palmer, the then governor, devised a rule for the regulation of the issues and the securities, but it was found impracticable, 3382-3388 ——Reference to the severe foreign drain which ceased in March 1837, and to the large increase of notes in circulation which preceded and prolonged such drain, 3389-3406 ——Peculiarly severe drain in 1839, preceded and aggravated by a considerable increase of circulation; severe measures necessary on this occasion, 3407-3430.

After the experience of the years 1837 and 1839, as well as of 1825, witness cannot conceive how it can be maintained that a mixed circulation of gold and convertible notes must vary in the same way as a purely metallic circulation, 3431-3435——But for the Act of 1844 the circulation would have increased at the commencement of the present drain, just as it did before former drains, 3435——The more stringent measures,

Report, 1857—*continued.*

Norman, George Warde—(Analysis of his Evidence)—*continued.*

shown by the experience of 1825, 1837, and 1839, to have been required, were most usefully afforded by the Acts of 1844 and 1845; 3435-3437.

Further statement that the Act of 1844 mainly provides that the Bank shall hold a certain fixed amount of securities upon which notes shall be issued, and that beyond such issue all notes shall be issued on gold, 3438-3441——The Issue Department is not subject to any control by the Banking Department, its function being merely to exchange notes for gold, 3442, 3443——It is some advantage to the public to exchange gold for notes, instead of to take it to the Mint to be coined; the latter course is very rarely adopted, 3444-3450.

The separation of the departments is an essential part of the system, as necessarily leading to the fact that the issues of bank notes vary in all cases exactly as bullion would vary, 3451-3453——There is practically no artificial regulation of the currency by the Act of 1844; witness is strongly opposed to any action upon the currency, save the action of natural laws, 3454-3457. 3516——The Banking Department holds some coins for the convenience of its customers, just as other banks do, and meets its liabilities (as witness further maintains) on precisely the same principle as other bankers, 3458-3472.

As regards a drain upon the deposits of an issuing banker, it may be met by selling securities and recalling loans, as well as by increased issues, 3473-3475——The deposits of the Bank of England vary very little, 3476, 3477——Explanation with reference to a return from the bank, showing that during periods of adverse exchanges and high rates of interest the depositors do not materially reduce their deposits, 3476-3482——Probable reason of the difference between the circumstances of different drains, 3483.

The check upon over-issues by country banks more than counterbalances the disadvantage of their monopoly of issue, 3484-3486——Witness further maintains the necessity of some restriction upon issues generally, 3487-3515——Further reference to the crisis in the United States in 1837, and the numerous failures of banks which then took place, as showing that over-issue had gone to a frightful extent, 3490-3495.

Witness further repeats, that at certain times there is power in issuers to maintain an increased or excess of issue for a longer time than could occur under a metallic currency, 3495-3514——Further explanation as to an over-issue of paper resulting in a temporary depreciation of the whole currency, 3504-3509——Less ultimate mischief in the case of drains which have occurred since the Act of 1844; 3513-3515. 3610.

Witness totally dissents from the doctrine that if the Bank hold a certain large amount of bullion, a drain upon it may be suffered to run its course without doing any mischief, 3516-3519——Under the self-acting test of the Act of 1844, the contraction commences with the drain, and goes on proportionately with it, 3516. 3518. 3610——Under any artificial regulation the contraction would, in all probability, be less regular and more mischievous, 3516-3519. 3610.

Probability of the rate of interest having varied more since the Act of 1844 than previously, 3520——Slight and temporary effect of the amount of notes with the public on the rate of interest, 3521. 3523——Opinion that the rate permanently depends upon the demand and supply of capital, 3522, 3523——The ultimate effect of increasing the quantity of money is to raise prices, not to lower interest, 3523——The usury laws had not much effect upon the rate of interest, except occasionally to raise it, 3524, 3525.

Save at exceptional periods, such as the end of a quarter, the Bank of England has no power to affect the market rate, 3526——Anomalous character of the Discount Office, that is, the office through which advances are made by the Bank, 3527, 3528——The power of raising the rate is found a sufficient check upon the amount of discounts demanded, 3529——The Bank rate is never so low as the lowest rate out of doors, 3530——A power in the Bank to raise and lower the rate at its discretion is absolutely essential, 3532.

Further statement that an issue of an additional 2,000,000 *l.* on securities is not desirable; the general effect would be that there would be 2,000,000 *l.* more in gold thrown into the market, and that it would principally go abroad, 3533-3537——So far as the Bank of England is concerned, witness is strongly opposed to any relaxation of the Act of 1844; 3538, 3539——The general opinion of mercantile authorities is opposed to any relaxation of the Act, 3540. 3625, 3626.

Further opinion that the country issues have been conducted more satisfactorily since the Act of 1844; 3541——Disapproval of a power in country banks to issue to any extent provided they gave security for two-thirds, and issued one-third upon gold, 3542-3544——Although witness does not like private issues at all, he is, on the whole, satisfied with the present system of issue in Scotland, 3545, 3546——Examination to the effect that a contraction of the circulation is sufficient, if carried far enough to restore the equilibrium of the exchanges; state of things during the drain of 1839 adverted to hereon, 3551-3567.

Practice of the Bank in regard to issues when witness joined the direction in 1821 further

Report, 1857—*continued.*

Norman, George Warde. (Analysis of his Evidence)—*continued.*

further adverted to; doubt as to the directors having been induced to increase the issues, in consequence of certain enactments by Lord Castlereagh in regard to their lending money upon mortgage, &c., 3568-3580——Slight extent to which the Bank now lend money upon mortgage or inconvertible securities, 3581-3588——Witness further states that the Act of 1844 operates by natural and not by artificial causes, 3589-3591.

Reference to the application by the Bank to Government to be allowed to issue to the extent of two-thirds of the lapsed country issues; witness was not a party to this application, 3592-3598. 3631——Occurrence of pressures in the United States when the paper currency was not in practice convertible, 3599-3604——The currency of the States is supplied by several chartered banks, and not by one national bank, 3605——There have been periods in America when over issues have gone a great way towards denuding the country of bullion, 3606-3608——The crisis in America in 1837 was the result of a most inflated state of credit, 3609.

Witness further objects to any relaxation of the Act of 1844 which should throw more discretion and responsibility in the Bank Direction, and considers it very probable that an absolute discretion in the Bank in regard to issues would not have resulted in so wise a course as that which is now provided by the Act, 3610-3624——Witness does not consider the expediency of restriction to be any impeachment of the constitution and action of the Bank management, 3612-3624——Probability of the Act having been made temporary for ten years, with a view to its reconsideration at the end of that period, 3627, 3628.

Explanation that the application in regard to the issue by the Bank, in lieu of the lapsed country issues, really emanated from the Government, 3629-3632—— Explanation of the term "natural laws," as now applied to the regulation of the currency, 3633, 3634——Explanation of the term "capital," with reference to its being the means of regulating the rate of interest, 3635-3638——As regards any circumstances which cannot be provided for by the Act of 1844, they are of so exceptional a nature that it is much better to provide for them as they occur, by direct legislation, 3639.

Norman, Mr. Letter from Mr. Norman to the Governor of the Bank of England, dated 22 October 1856, relative to the Bank Acts of 1844 and 1845, and the question of any alteration therein, *App. p.* 13-16——Remarks on the general question of a paper currency, *ib.* 13, 14——Statement in approval of the operation of the Acts of 1844, *ib.* 14-16——Amendments suggested in the Act, *ib.* 15.

Recommendation by Mr. Norman that the circulation of 1 *l.* and 2 *l.* notes be discontinued, *App. p.* 15——Advantage of an uniform system of legal tender throughout the United Kingdom, *ib.*——Advantage if security were required from all issuing banks, *ib.*——Approval on the whole of the renewal of the Acts of 1844 and 1845 without any material alteration, *ib.* 16.

O

ONE POUND NOTES:

1. *As to their Abolition in Scotland and Ireland.*
2. *Amount of Circulation in Scotland and Ireland.*
3. *As to their Introduction into England.*

1. *As to their Abolition in Scotland and Ireland:*

Suggested discontinuance of the lower denomination of notes in Scotland, *Weguelin* 115.

Reasons in favour of a continuance of the small note circulation in Scotland and Ireland, *Newmarch* 1418, 1419——Increase of the small note circulation in Ireland and Scotland under certain conditions of trade, *ib.* 1514, 1515——A limitation of the credit circulation in Ireland and Scotland is not more necessary than if the notes were all of a higher denomination, *ib.* 1517, 1518——Further evidence in approval of the 1 *l.* note in Scotland and Ireland, but in disapproval of their introduction into England, *ib.* 1761–1785.

Approval of the circulation of 1 *l.* notes in Scotland, *Mill* 2060——Question whether it is not expedient to stop the issue of 1 *l.* notes in Ireland, *ib.* 2060–2065.

Unless the Scotch and Irish private notes are absorbed in an uniform currency, witness sees no weighty reason against the circulation of the smaller notes in those countries, *Hubbard* 2509–2512.

The suppression of 1 *l.* notes in Scotland and Ireland may not be feasible, but small notes are, as a general principle, objectionable, *Right Hon. Lord Overstone* 3696.

Recommendation by Mr. Weguelin, that the Legislature should encourage the circulation of coin for small payments and abolish the 1 *l.* and 2 *l.* notes, as a means of providing a reserve in time of difficulty, *App. p.* 2, 3.

Remarks by Mr. Neave in favour of the abolition of 1 *l.* and 2 *l.* notes, *App. p.* 5.

Remarks by Mr. Cotton as to the difficulties on abolishing the small note circulation in Ireland and Scotland, *App. p.* 7, 8.

Recommendation by Mr. T. N. Hunt, that all notes under 5 *l.* be discontinued, *App. p.* 9.

Abolition of the small notes recommended by Mr. Norman, *App. p.* 15.

Recommendation by Mr. Latham, that the 1 *l.* notes be abolished, *App. p.* 17.

Recommendation by Mr. H. W. Blake, that the issue of notes under 5 *l.* be abolished or diminished, *App. p.* 18.

Recommendation by Mr. B. B. Greene, that the issue of small notes be suppressed, *App. p.* 19.

Recommendation by Mr. J. Malcomson, that there be an early withdrawal of the 1 *l.* and 2 *l.* notes, *App. p.* 20.

2. *Amount of Circulation in Scotland and Ireland:*

Account of the aggregate weekly circulation of the notes of Banks of Issue in Scotland and Ireland, distinguishing those of 5 *l.* and upwards and those under 5 *l.*, and showing the total amount in Scotland and Ireland respectively, with the amount of bullion held, from the 13th December 1845 to the 9th May 1857, *App. p.* 204–213.

3. *As to their Introduction into England:*

Greater risk of forgery in the case of the smaller notes, *Weguelin* 115. 129-131; *Newmarch* 1421; *Hubbard* 2503–2506——In times of great emergency, such as entire failure of the harvest, it might be very advantageous to issue small notes as a means of extracting gold from circulation, *Weguelin* 679-689——So long as the convertibility of the note is maintained, notes of small denomination are not objectionable in principle, *ib.* 690, 691——In practice it would be necessary to retain a larger reserve of bullion in case of issue of 1 *l.* or 2 *l.* notes, *ib.* 692–694——Great usefulness of an issue of small notes during the drain of 1825, *ib.* 695, 696.

Absence of reason for introducing 1 *l.* notes into England, *Newmarch* 1419, 1420——Though there is no difference in principle between a 5 *l.* note and a 1 *l.* note, witness further objects to the use of the latter in England, *ib.* 1516. 1761–1785. 1914——Disapproval of an issue of notes under 5 *l.* in England, *Mill* 2045, 2046. 2060, 2061. 2066, 2067.

Disapproval of the issue of notes of less value than 5 *l.* in England, so long as the circulation is not uniform, *Hubbard* 2503——Convenience in the issue of 2 *l.* or 3 *l.* notes if the small notes in Ireland and Scotland were annihilated, *ib.* 2503——Greater probability

One Pound Notes—continued.

3. *As to their Introduction into England*—continued.

bability of a drain or panic on account of 1 *l.* notes than of 5 *l.* notes, *Hubbard* 2506——As regards any effect upon credit or prices there would be no inconvenience in the issue of 1 *l.* notes or 2 *l.* notes in England, *ib.* 2733-2738.

Objection to the introduction of one pound notes into England, *Right Hon. Lord Overstone* 3696——Circumstance of the issue of 1 *l.* notes during the panic in 1825, having relieved the Bank without any discredit being thrown on the notes, *ib.* 3793-3795 As a general principle all the smaller transactions of the country below 5 *l.* should take place in coin, *ib.* 4131, 4132.

If the Bank of England notes were all issued on gold, 1 *l.* notes would be an advantage, *Alexander* 4317.

Overend, Gurney & Co. The transactions of the house, which mainly consists in discounting commercial paper, are on a very large scale, *Chapman* 4836, 4837——Reference to a tabular statement (which witness delivers in) showing the rates of discount charged by witness's house for first class bills in each month in each of the years 1824-57, together with the average rate per annum, *ib.* 4875-4879——Witness's firm are not bill brokers but money dealers, *ib.* 4931. 5296-5299——Practice of witness's house with regard to money held on call, *ib.* 4941-4948——Strong objections held by witness as a money dealer, to investments in Exchequer bills or other fluctuating property, *ib.* 5102-5116.

Circumstances under which witness's house applied to the Bank for discounts on three occasions in October 1847, *Chapman* 5107——On the 19th of October the Bank required 10 per cent. for advances on bills of exchange, *ib.*——Within two days after the letter came out, witness went to the Bank with a view to getting back all the bills sent in just previously; the Bank rate on these bills was reduced from 10 *l.* to 9 per cent., *ib.* 5149.

Doubt as to the amount of discounts of witness's house respectively when the rate of interest is high and when it is low; they are very large under the present high rate, *Chapman* 5155-5161. 5322-5326.

Further statement relative to the discounts by the Bank for witness's house in October 1847; exception taken to the exaction of 10 per cent. by the Bank; interview of the witness with the Governor and Deputy Governor on the 5th or 6th October adverted to hereon, *Chapman* 5239-5245.

Examination with reference to the circumstance of witness's firm having charged only 4½ per cent. for discounting, that is one-half per cent. below the prescribed rate, during the pressure in November and December 1825; doubt as to any commission having been charged in addition to this rate, *Chapman* 5246-5270. 5348.

Further statement as to the Bank having, in the first instance, charged witness's house 10 per cent. for discounting certain bills in October 1847; the rate was, however, reduced in a few days to 9 per cent., *Chapman* 5406-5409.

Over-Issue:

1. *Absence of Power in the Bank of England or in Country Banks of Issue to affect the aggregate Circulation.*
2. *Evidence opposed to the foregoing Proposition; Power of Banks to over-issue, and thereby to cause great Disaster.*

1. *Absence of Power in the Bank of England or in Country Banks of Issue to affect the aggregate Circulation:*

Evidence to the effect that the country issuers cannot at their will increase or decrease the active circulation, *Weguelin* 712-746——Absence of any material increase in the circulation in consequence of the establishment of joint stock banks in 1831 and following years, *ib.* 719-721——The Bank of England has no means of materially contracting its circulation, *ib.* 746, 747. 757-779——Practically it appears that country banks cannot, any more than the Bank of England, increase their issues or circulation at their own will, *ib.* 955 *et seq.*

Further evidence in corroboration of the argument, that expansion or contraction of trade has little if any effect upon the circulation of the Bank of England, *Weguelin* 959 *et seq.* 995, 996——Except under peculiar circumstances and to a limited extent, the Bank cannot extend its issues, *ib.* 1301-1308. 1312.

Absence of any power in the Bank of England, or other banks of issue, to determine the amount of outstanding circulation, *Newmarch* 1312. 1409, 1410——Belief that there cannot be an over-issue, so long as convertibility is maintained, *Newmarch* 1345; *Mill* 2313-2316——Absence of power in country bankers to extend their issues, *Newmarch* 1408, 1409. 1513.

Further evidence to the effect that neither the Bank of England or country banks have power to increase their circulation, *Newmarch* 1593 *et seq.* 1690-1694. 1894 *et seq.*

Report, 1857—*continued.*

Over-Issue—continued.

1. *Absence of Power in the Bank of England, &c.*—continued.

1964——A competition between local banks of issue tends to diminish rather than increase the circulation, *Newmarch* 1613-1615——Less difficulty in affecting the amount of circulation, but for the check of convertibility, *ib.* 1629-1631. 1823-1850——It is a delusion to suppose that the Bank of England could increase and make use of any quantity of notes and thereby relieve the public, *ib.* 1688-1694.

Examination as to the issue respectively of convertible and inconvertible notes, to the effect, that in the latter case there is not the same practical limit upon the issue, *Newmarch* 1829-1843. 1939-1963——There should be no restriction upon issue save that of convertibility, *Mill* 2011.

Great difficulty of affecting the amount of notes in the hands of the public, *Hubbard* 2358——Save under exceptional circumstances, neither the Bank of England nor any other bank has power to increase its circulation, *ib.* 2407-2413——By setting on foot new speculations a banker may for a time increase the circulation, *ib.* 2410-2413——Power of the Bank by sale of securities slightly to contract the circulation, *ib.* 2596-2606——Tendency of large advances on the part of the Bank temporarily to increase the active circulation to a limited extent, *ib.* 2607-2614.

Fluctuations in the circulation are determined by the requirements of trade and not by the will of issuers, *Hubbard* 2615. 2655-2666——Evidence to the effect that country issuers cannot affect the entire circulation, though, as rival issuers, between themselves or with the Bank of England they may cause variation in the quantity of notes which each might keep out, *ib.* 2667-2680——The relative proportion of gold to paper may be varied, but the total amount cannot be varied by any enactment, *ib.* 2763, 2764.

Absence of power in the Bank to determine the circulation in the hands of the public, *Chapman* 5064-5066.

2. *Evidence opposed to the foregoing Proposition; Power of Banks to over-issue, and thereby to cause great Disaster:*

Argument that the principle of competition cannot be applied, without mischief, to the issue of paper money; the mere convertibility of the note is not, in fact, a sufficient security against over-issue, *Norman* 2894-2920. 3196——Extent to which it may be in the power of bankers by excessive issues of paper to affect the price of gold, or rather to depreciate the whole currency, *ib.* 2903-2908. 3132——Largely increased issues of private banks between 1834 and 1836, *ib.* 2908. 3179-3201.

Further evidence in support of the proposition that there should be no competition as regards issuing banks, on the ground that for a certain time and under certain circumstances a mixed currency may be maintained to a greater amount than a metallic currency could be maintained, *Norman* 3008-3032. 3115 *et seq.*——By lending at a low rate of interest the Bank of England might for a time maintain an increased circulation, *ib.* 3122-3131.

Further statement as to a mixed convertible currency being depreciated in comparison with the currency of other countries if such mixed currency be maintained for a time at a higher amount than a purely metallic currency could be maintained, *Norman* 3156-3178——Further consideration of the large increase between 1834 and 1836 in the issues of country bankers; large decrease during the same period in the circulation and the bullion of the Bank of England; inference nevertheless as to a power in issuers to maintain a somewhat increased circulation for a certain time, *ib.* 3179-3201. 3286-3291——The test of convertibility is sufficient to prevent indefinite issues, *ib.* 3196.

Further statement as to the effects of an increase of issues by issuing banks on the Bank of England in leading to a depreciation of the aggregate currency and a probable export of gold, *Norman* 3291-3303. 3504-3509——Motive of country bankers to increase their issues; check to over-issue if they were obliged to issue Bank of England notes, first giving proper security for them, *ib.* 3304-3317. 3335-3340——Witness further repeats, that at certain times there is power in issuers to maintain an increased or excess of issue for a longer time than could occur under a metallic currency, *ib.* 3431-3435. 3495-3514.

As regards unrestricted competition between country banks of issue, such banks would have power, under certain circumstances, of unduly expanding their paper circulation, and might produce very mischievous results, *Right Hon. Lord Overstone* 3688, 3689——Belief as to the power of the Bank of England (if not restricted in issue) to put off any amount of notes it pleases, displacing thereby and driving out of the country a corresponding amount of gold; power in fact to banish for a time gold from the country, *ib.* 3906-3918——Extent of witness's experience relative to the practice of issuing banks adverted to in connexion with his views as to the power of over-issue, *ib.* 3922-3927.

Argument that every monetary crisis which this country has gone through can be clearly traced to the non-diminution of the paper money or issue as the bullion left the country, *Right Hon. Lord Overstone* 3988, 3989——Evidence in detail with reference to the

Report, 1857—*continued.*

OVER-ISSUE—continued.

2. *Evidence opposed to the foregoing Proposition, &c.*—continued.

the several monetary pressures between 1783 and 1844, showing that the evils which arose were mainly owing to over-issues of paper money, *Right Hon. Lord Overstone*, 4173-4188——The maintenance of the paper at an undiminished amount whilst there is a drain of bullion is practically an over-issue, *ib.* 4174. 4195.

Statement with reference to the severe crisis and panic in 1792 and 1793, showing the tendency of banks to over-issue in a period of excitement, and the inevitable and disastrous results which follow from such over-issues, *Right Hon. Lord Overstone* 4177——The non-convertibility of the note at this period had nothing to do with the power of issuers to put out their notes in accordance with the demand for them, *ib.* 4180——Statement showing that in the year 1800 and following years there was a considerable excess of issue of paper money, *ib.* 4180.

With regard to the crisis of 1825 witness adduces certain facts as clearly showing that between 1821 and 1825 there was a considerable increase in the circulation of Bank notes of 5*l.* and upwards, *Right Hon. Lord Overstone* 4182, 4183——Allowance to be made in considering the paper circulation in 1821 and 1825 for the suppression of 1*l.* notes and the substitution of coin, *ib.* 4182——Great reduction in the bullion in the Bank at this period in consequence of the over-issues, *ib.*——In addition to the increased circulation of the Bank of England in 1825, witness cites sundry grounds for the conclusion that the country issues were greatly in excess at that period, *ib.* 4182, 4183——The proposition that the paper issues were less in 1825 than in the preceding years rests upon no evidence whatever, and is a most reckless and fallacious assumption, *ib.* 4182, 4183.

Statement showing the undue regulation of the paper issues in the period between 1833 and 1839, there having been a decided over-issue in the years 1837 and 1839, *Right Hon. Lord Overstone* 4184-4187.

Strong inculcation of the proposition that the ultimate effect of an over-issue of paper money must be to depreciate the aggregate currency, and to cause an exportation of coin or bullion, *Right Hon. Lord Overstone* 4185-4188.

See also *Drains of Bullion and Monetary Pressures. Prices. Speculation. United States.*

Overstone, Right Hon. Lord. (Analysis of his Evidence.)—Gave evidence before the Select Committee of the House of Commons in 1840 on Banks of Issue, also before the Committee of the House of Lords in 1848 on Commercial Distress, and expressed himself on those occasions strongly in favour of the principles embodied in the Act of 1844; 3640-3643——Has year by year become more and more convinced of the soundness of the policy of the Act, and is strongly in favour of its renewal, 3642-3645——Considers that public opinion has of late years become much confirmed in favour of the Act, and refers on this point to what may properly be termed the unanimous declaration in its favour by the Bank Directors, 3645.

The great principle of the Act is to make the amount of paper money in the country conform in its variations to what would be the variations in the amount of a metallic currency, 3646——The separation of the banking and issue departments is the main ancillary provision for carrying out the principle of the Act, *ib.*——Definition of the several objects of the separation; they have been completely effected, *ib.*

Witness has drawn up a short statement of his views upon the several heads embraced in the present inquiry, and reads the same to the Committee; the several propositions contended for are put forth as a conclusive argument in favour of the Act, 3648.

Proposition that the supply of the current coin should be entirely separated from banking business, 3648——Also that the issue of paper money representing coinage should be under the regulation of the same hands as those which manage the coinage, *ib.*——Also that the paper notes ought to be preserved at their proper value, by making them, under all circumstances, conform in amount to the coins which they represent, *ib.*——Also that the sole privilege of coining money should be vested in one institution established by law for that exclusive purpose, *ib.*——Also that all profit arising from the issue of paper certificates or bank notes should be appropriated to the public exchequer, *ib.*——Also that perfect freedom of competition should be established in the business of banking, as effectually distinguished from the functions of coining or of issuing paper tokens, *ib.*

Effectual security under the Act of 1844 that the paper circulation shall at all times conform to what would be the amount of a metallic circulation, 3648——Effectual protection of the bullion reserve under the operation of the Act, as shown in the drains of 1847 and 1856-57, *ib.*——Commercial prosperity consistently with the restrictions of the Act, *ib.*——Want of proper regulations subsequently to 1819, when cash payments were resumed, and the note declared to be convertible, *ib.*——The true character of the paper note was grasped by Sir Robert Peel; hence the Act of 1844, *ib.*

As regards the reserve of bullion it cannot be said to lie in the Bank of England, but in the issue department, which is essentially a department of the state, 3649——Evidence strongly

Report, 1857—*continued.*

Overstone, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

strongly opposed to the proposition that the larger amount of bullion since the Act of 1844 is the effect of the importation of gold from Australia and California, 3649—— Explanation of the mode in which the Act necessarily provides against undue reduction in the amount of bullion, 3649-3651——At the commencement of a drain the corrective influence of the Act is at once brought into play, 3650, 3651.

With regard to the rate of interest, all great fluctuations in it are the result of alterations in the value of capital, or in the amount of money in the country, 3652, 3653. 3718——The assertion that the separation of the departments has caused more frequent and violent fluctuations in the rate of interest is not in any way supported by fact, 3653. 3661, 3662——Witness denies that the fluctuations have been greater since 1844 than they were in former years; facts in support of this statement, *ib.*——Reference to the views of Mr. Tooke, as being to the effect that the Bank of England has not caused any undue fluctuations in the rate of interest, and that fluctuations are, in fact, expedient as well as unavoidable, *ib.*

Salutary effect of rises in the rate of discount, and of contraction of trade when there is an undue demand for capital, 3654-3657. 3718——Fault of the Bank if it does not strictly and speedily conform to the real market rate of interest, 3657——Objections to the proposal that the Bank should be restricted to a minimum rate of 4 per cent., 3658-3660.

Witness now looks upon the issue department as being so effectually separated from the banking department that it is not necessary or expedient to make the separation more complete, nominally, by placing the issues directly under Government, 3663-3671 ——The term "Bank" should not be associated with the issue department at all; the Bank have not, in fact, any power whatever over the issues, and are merely the mechanical agents of Government in the matter, 3664-3671.

It is extremely desirable in principle to absorb the country issues in the issues of the Bank of England, 3672. 3680. 3685-3687——Approval of the course taken by Sir Robert Peel with a view to the gradual extinction of the country issues, 3672-3675—— Although the operation of the composition has not hitherto been considerable, witness considers that the country issues are in a fair way of being extinguished, 3676-3678. 3681-3685——Disapproval of detailed discussions upon the monetary system and the banking regulations of the country, 3679-3703——It would be better to take further and more decided steps for stopping the country issues altogether, than to permit such issues to be extended on the security of bullion, or to require security even without increased issues, 3680. 3687.

As regards unrestricted competition between country banks of issue, such banks would have power, under certain circumstances, of unduly expanding their paper circulation, and might produce very mischievous results, 3688, 3689——Witness is not prepared to recommend any alteration of the amount which the Bank can now issue upon securities, 3690——An extension of the limit of issue from 14,000,000*l.* to 16,000,000*l.* would not give any palpable relief to trade, and would merely result in the withdrawal of 2,000,000*l.* from the bullion reserve, 3690-3694—Whether the Bank issue to the extent of two-thirds or to the full extent of the lapsed country issues, is quite immaterial, 3695.

Objection to the introduction of 1*l.* notes into England, 3696——The suppression of 1*l.* notes in Scotland and Ireland may not be feasible, but small notes are, as a general principle, objectionable, *ib.*——Remarks on the circumstances of there being no local banks of issue in the manufacturing districts of Lancashire, such districts being adequately and satisfactorily provided for by the circulation of the Bank of England, 3697-3703.

Witness further repeats his strong approval of the Act of 1844, the renewal of which, without discussion, would have been the wisest course that could have been adopted, 3704, 3705——Growing feeling in monetary and commercial classes in favour of the Act, 3705. 3719——Soundness of the state of the currency at the present time and ever since the passing of the Act, though within the last 10 years it has been subjected to some most trying ordeals, 3706-3718——Many ways in which a heavy foreign expenditure may be met besides that of an export of bullion, 3709-3712.

Further evidence relative to the high rate of interest during the last few years, to the effect that the same is mainly owing to the immense development of the trading operations of this country and of the world, and the consequent increase in the value of capital. 3718. 3722 *et seq.*——Effect of variations in the quantity of money or capital in causing slight variations in the rate of interest, 3718. 3749-3755. 3782. 3802-3804——Fallacy of confounding money with capital, under which fallacy some commercial men consider they are prejudiced by the Act of 1844; 3720, 3721——The idea of the profits of trade being destroyed by high rates of interest is most erroneous, 3722 *et seq.*

Absence of any intimate connexion between an increased reserve of bullion and a decline in the prosperity of trade, as well as in the rate of interest, 3732-3735——Under a drain of bullion it is not the capitalist but the non-capitalist who wants to obtain money, 3736-3743. 3760-3766——Absence of similar relation between bills of exchange and the stock of the merchant who draws them, and between Bank notes and the bullion

Report, 1857—*continued.*

Overstone, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

bullion which they represent, 3738–3742——General indication of the term "capital," 3744.

During the process of a drain of bullion there must of necessity be some pressure as a means of rectification, but such pressure is decidedly salutary, and the sooner it is resorted to the better, 3745. 3782–3786——Further argument that all great changes in the rate of discount are not the result of changes in the amount of bullion or money in the Bank, but have reference to the relation between the supply and demand of capital, 3746–3755. 3782. 3804——Distinction between capital and money; the latter is, in fact, merely a means of obtaining the former, 3756–3759.

Under a high rate of discount, the pressure on the merchant lies in the increased difficulty of his getting money as a means of getting capital, 3756–3761——Practice of bankers to supply to persons in want of capital, even though they may not have tangible security to give, the deposits of the inactive accumulator of capital, 3762–3766——High rates of interest which prevailed during the period between 1797 and 1821, although, as regards the Bank rate, it was fixed at 5 per cent., 3767–3777——Effect of the Act of 1844 to cause very frequent alterations in the rate of interest, but very small in extent and extremely salutary in their operation as compared with the fluctuations under former systems, 3778–3786.

Practicability of carrying on the commercial operations of the country if the paper circulation were withdrawn, 3787–3790——A state of barter is at the bottom of all commercial transactions, money being only a means of carrying on that barter, 3790–3792——The public alarm in 1825, 1837, and 1839, was beyond all doubt for the convertibility of the note, 3793. 3796——Circumstance of the issue of 1 *l.* notes during the panic in 1825 having relieved the Bank without any discredit being thrown on the notes, 3793–3795——There need be no fear of the convertibility of the note, if the issue be limited, with regard either to the external or internal exchanges, 3797.

The prices of commodities are the last thing which is reached by fluctuations in the amount of money, 3798, 3799——Fallacy of the term "raising the rate of discount," as applied to the Bank, 3800——The value of money rises by natural circumstances, and the Bank is obliged to conform to that rise, or, in other words, a higher rate of interest is forced upon the Bank, 3800–3808——Natural effect of a rise in the rate of interest to lower the price of goods and of securities, and by increasing the value of money in the country to bring it thither from other countries, 3805–3810——Foundation of the present principle of currency further adverted to, 3811.

Evidence strongly opposed to a proposition for the issue of 14,000,000 *l.* in inconvertible notes not payable in specie on demand, conjointly with the issue of a further amount of notes, equal to the amount of bullion, which should be payable on demand, 3812–3825——Argument that oscillations in the rate of interest are in no way injurious to the commerce of the country, 3815–3817——Further reference to the distinction between money and capital; definition of the former, 3817–3819.

Active circulation of the Bank adverted to, as including in it the reserve of the Bank, 3826–3834——Every note put out against bullion is in all principle a metallic circulation, 3831——Illustration showing that the notes in the Bank, or the Bank reserve, are of the greatest importance with regard to the monetary operations of the country, and practically are a most active portion of the circulation, 3832–3836——Reference to the Government letter of October 1847, as having led to an indefinite increase of the Bank reserve, and at once restored confidence, 3833. 3836, 3837——The pressure of 1847 was caused by the paucity of capital in relation to the demand for it, 3834, 3835.

Anxiety of the public in regard to the state of the Bank reserve, 3838–3840——Feeling of the public as to the effect of the amount of the reserve upon the rate of interest, 3840——Close relation between variations in the rate of interest and the state of the reserve, on the ground that the reserve is the indicator of the increase or decrease of the quantity of money in the country, 3841——Intimate connexion between the state of the reserve of the Bank and of the bullion in the Issue Department, 3842.

With reference to an answer given by witness before the Committee in 1848 on Commercial Distress, to the effect that the commerce of the country would continue to prosper notwithstanding fluctuations in the rate of interest, he fully abides by that answer at the present time, 3843, 3844.

[Second Examination.]—Further statement relative to the views of Mr. Tooke in regard to variations in the rate of interest; dissent from the doctrine more lately held by Mr. Tooke on this point, 3845–3847——Further denial that the Act of 1844 has caused more violent fluctations in the rate of interest, 3847——Denial, also, that fluctuations are avoidable, or that they are a national calamity, *ib.*

Improper impediment caused by the usury laws to the free action of the Bank of England in regard to its nominal rate of discount, though they did not prevent the Bank or others from advancing money, in a variety of ways, at more than 5 per cent, 3848–3853——Soundness of the principle that the price paid for the use of loanable capital should

Overstone, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

should vary in accordance with the supply of such capital, 3854-3858——Further reference to the slight extent to which profits in trade are affected by high rates of interest, 3859-3863—— Advantage to persons trading with their own capital, or only partly with their own capital, when the rate of interest is high, 3864-3873.

The convertibility of the note will not of itself cause the paper circulation to conform to the variations of the metallic circulation, 3874, 3875——For all purposes of internal circulation the paper, so long as it is convertible, must be of identical value with the coin, 3876-3878——The term "circulation" comprises not only the notes and coin in the hands of the public, but the precious metals and notes in the Banking Department, 3879-3891——The bullion in the Issue Department cannot be considered prrt of the currency, 3880.

Circumstances under which uncoined bullion, whether in the hands of the Bank or of private individuals, may be said to form part of the circulation or money of the country, 3881-3889——The notes in the Banking Department form not only a part, but a vital part of the money of the country, 3890, 3891. 3900—— Remarks with reference to a statement by witness in 1840, that the notes in the hands of the public should conform to the fluctuations in the amount of bullion; explanation that there was at this period no accurate knowledge of the state of the reserve in the Bank, 3892-3907.

The want, previously to 1844, of a proper definition and limit of the Bank reserve was the cause of numerous evils which the present Act has entirely guarded against by supplying the want in question, 3895 —— The account adopted by the Bank Directors, previously to 1844, relative to a separation of the departments was merely a tentative account for their private information, 3897, 3898.

Belief as to the power of the Bank of England (if not restricted in issue) to put out any amount of notes it pleases, displacing thereby and driving out of the country a corresponding amount of gold; power in fact virtually to banish for a time gold from the country, 3906-3918——Further statement that the practical effect of issuing 2,000,000 *l.* more upon securities would be to diminish the bullion reserve of the Bank by that amount, 3908-3911——Ordinarily speaking the bullion which goes to meet adverse foreign exchanges comes from the reserve in the Issue Department, 3919-3921. 3929, 3930. 3936——Extent of witness's experience relative to the practice of issuing banks adverted to in connexion with his views as to the power of over-issue, 3922-3927.

Necessity of the quantity of notes with the public, varying in relation to the metallic currency on account of the cancelling of those notes in respect of which bullion is taken from the Issue Department, 3930-3934 —— Any withdrawal from the reserve, whether under a mixed circulation or a metallic circulation, will at once have a powerful and salutary effect upon the action of the public, 3933-3943—— Effect of a diminution of the Bank reserve and of the money in the country to cause a higher rate of interest and an increased value of the money still in the country, thereby leading to a rectification of the exchanges, 3937-3943.

The reserve of the Bank consists of that amount of notes issued by the Issue Department which is not elsewhere than in the Bank, the Bank having power to convert such notes into bullion by presenting them at the Issue Department, 3944. 3690——The bullion in the Issue Department represents equally the notes in the hands of the public, and of the Banking Department, 3945——In principle the note is or ought to be a legal tender in the Banking Department, 3946-3451——Practically, it is quite immaterial whether the note be a legal tender in the Banking Department or not, 3950, 3951.

In speaking of the Bank of England, witness always means the Banking Department, 3951——There is, strictly, no bullion in the Bank of England, 3952. 3960. 3964——The Issue Department belongs to the State, and its management by the Bank of England is merely of a mechanical nature, 3953-3959—— The Bank merely contracts to do the business of the Issue Department on behalf of the State, being allowed certain profits and incurring certain risks, 3954-3959.

Further statement that the predominant object of the Act of 1844 was to cause the Issue Department to put forth an amount of notes which should fluctuate as the bullion in the department fluctuated, 3959. 3962-3967——The alteration in the form of accounts has been extremely beneficial with regard to the instruction and guidance of the public, 3961-3963——Essential advantages of the separation of the departments further adverted to, 3961-3968.

The Issue Department is now as distinct from the Bank of England as is necessary for all purposes which have reference to the principles affecting the regulation of the exchanges, 3969——The profit derived from paper issues may be considered as going to Government, the latter making a certain bargain with the Bank on the basis of that principle, 3970-3972——As a matter of principle the unissued notes of country banks must be looked upon as part of the circulation, 3973-3975.

Further statement with reference to the Act of 1844 not having required security in the case of the country issues, 3976-3980. 3983-3986——Advantage in the limit placed by the

Report, 1857—*continued.*

Overstone, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

the Act upon the amount of country issues, 3977. 3980, 3981——Gradual diminution of the country issues further adverted to; circumstance of this having largely resulted from the insolvency of the banks, 3981-3985.

Argument that every monetary crisis which this country has gone through can be clearly traced to the non-diminution of the paper money or issue as the bullion left the country, 3987, 3988——Had the Act of 1844 been in operation in 1825 and 1837, or during other crises, it must have prevented the diminution of bullion which took place, 3987-3995——The non-suspension of specie payments in the spring of 1847 may be distinctly traced to the provisions of the Act of 1844; 3988. 3996-4004. 4061-4063——There is the strongest ground for believing that had blended accounts been in existence in the spring of 1847 specie payments must have been suspended, 3988. 3996-4904. 4066-4073.

Whatever be the extent of misconduct or mismanagement by bankers or by the mercantile community the maintenance of specie payments can never be endangered under the Act of 1844; 3994——The practical merit of the Act is that it compels the right course to be adopted, 3995——Universal experience has shown that with regard to the regulation of paper money discretionary action cannot be safely trusted, *ib.*

Further statement with reference to the action of the Bank during the pressure in 1847, showing that the Act of 1844 compelled the adoption of restrictive and wise measures, but that if the restrictions had been adopted at an earlier period of the pressure much of the evil might have been mitigated, 3996-4010*——Further statement that the Bank has no arbitrary power of raising or lowering the rate of interest, 4006, 4007. 4064, 4065——Firmer and more beneficial action of the Bank during the pressure of the last few years than in 1847; 4010*-4014.

Phraseology of portions of the Act adverted to with reference to witness's view that the Bank of England has not, save mechanically, any connexion with the Issue Department; the Act clearly provides that the department shall be conducted altogether irrespectively of the banking business, 4015-4018——Witness cannot understand that the term "Bank of England" includes the Issue Department, 4018.

Neither politically nor socially had witness any connexion with Sir Robert Peel, nor did he ever have any communication whatsoever with him on the subject of the Act of 1844; 4019-4022——The immortal gratitude of this country is due to Sir Robert Peel for the great national benefits he has conferred by the passing of the Act, 4020.

Further reference to the proposition that money is not capital; witness means thereby money in a dormant state, 4023——Sense in which it may be said that a bank note is a certificate of so much bullion, although the bullion deposited does not represent one half the notes in circulation, 4024-4028——Assumption that the country would never bear such a diminution of money as would be involved in carrying in the notes for cancellation down to 14,000,000 *l.*; 4026, *et seq.*

Further statement in support of the proposition that as the money of the country undergoes a diminution of amount its value increases, and that in proportion to such increased value bullion will flow in from other countries, 4029-4048. 4112-4117——Circumstance of a considerable quantity of bullion about to be transmitted from this country to America in 1847, and actually shipped for that purpose, having been retained in the country in consequence of its increased value, through the diminished amount of money, 4033-4035——Statement to the effect that by proper restrictions an importation of corn to the amount of 40,000,000 *l.* might be effected, with a drain of not more than 4,000,000 *l.* in bullion, 4043-4048.

Further evidence strongly opposed to the proposition for an issue of a certain quantity of notes payable for taxes, 4049-4060——The proposed inconvertible notes would be at a discount as compared with the convertible notes payable in specie on demand, and very disastrous confusion would be the result, 4049-4054——Under a system of inconvertible notes there would be much greater pressure than under the present system in the event of a large importation of corn, 4055-4060.

Further examination in regard to the pressure in 1847, and the operation of the Act of 1844 with reference thereto; denial that the restrictions of the Act were otherwise than salutary, or that the panic and the disastrous effect upon credit were in any way the result of the provisions of the Act, 4061-4095——Further remarks relative to the Government letter of October 1847, and the immediate restoration of confidence thereby, 4090-4095.

With regard to the drain during the last two years, witness repeats that the action of the Bank under the Act of 1844, has been most successful, 4096——Consideration of and strong objection to the course adopted by the Bank of France during the last few years, with a view to the non-suspension of specie payments, 4097-4104. 4118, 4119——Expense to the community in France in consequence of the artificial means adopted for keeping up the store of bullion, and the convertibility of the paper money, 4105-4111——Simple process under which the Act of 1844 provides for the convertibility, 4112-4118.

Although witness had no communication with Sir Robert Peel relative to the Act of

Overstone, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

1844, he and others had enunciated before the Select Committee in 1840, principles similar to those which Sir Robert Peel introduced into the Act, 4120–4124.

Witness cannot offer any suggestion in improvement of the Act, 4125——He further expresses his disapproval of discussions, like those before the Committee, upon the subject of banking and currency, *ib.*——Whether the Bank issue to the full extent, or to the extent of two-thirds of the lapsed issues of country banks, is not a matter of the slightest consequence, 4126.

Further evidence as to the connexion between a high rate of profit in trade and a high rate of interest, 4127–4130——Witness repeats his opinion that, as a general principle, all the smaller transactions of the country below 5 *l.* should take place in coin, 4131, 4132.

As regards the principle of limited liability, witness altogether disapproves of it, 4133——The principle of limited liability being established, it is only consistent that it be extended to banks, 4133–4135——If limited liability be extended to banks of issue, it should be on the condition of their surrendering their issues, 4134–4136.

The same rules which apply to the export of bullion apply to the export of any other commodity, 4137–4146——The export of bullion by any individual is the export of so much of the capital or property of that individual, 4138–4142——Outline of the working of the Issue Department, 4143–4145——Necessary consequence of an export of bullion that the reserve of the Bank of England, as well as of ordinary banks, is affected, 4147–4149.

With respect to the question of the Bank note being a legal tender in the Banking Department witness further states, that the note should be a legal tender everywhere throughout the country, except by the Issue Department, 4150–4153——Limited liability as now applied to the Bank of England is a theoretical limitation, and cannot, by any reasonable supposition, come into practical effect, 4154.

[Third Examination.]—Further evidence in support of the statement that the Issue Department belongs to the State, and has not, save mechanically, any connexion with the Bank of England, 4155–4162——The accidental form in which the Bank are paid for the conduct of the issues does not affect the question of the distinct separation of the Issue and Banking Departments, 4157–4162.

Comment on the inaccuracy of an assumption by Mr. Wilson (*Q.* 3929) that witness considers "bullion in the Bank of England to be part of the currency of the country," 4163–4169——The bullion in the Issue Department cannot, as well as the notes which represent such bullion, form part of the currency, 4163–4166——Witness repeats that the bullion is not in the Bank of England at all, as interpreted by him, but in the Issue Department, 4168, 4169.

Further remarks on the circumstance of the Bank directors having previously to 1844 made out, for their private information, a similar form of account to that now in use, 4170——In proof of the great importance of the present form of account witness is prepared to show that had such form been in practice during different pressures before 1844 immense good would have resulted, 4171, 4172.

Evidence, in detail, with reference to the several monetary pressures between 1783 and 1844, showing that the evils which arose on those occasions were mainly owing to over-issues of paper money, and that such evils must have been mitigated or prevented if the Act of 1844 had been in operation, 4173–4188——The maintenance of the paper money at an undiminished amount whilst there is a drain of bullion is practically an over-issue, 4174–4195.

Statement showing that, in 1783 and 1795, a severe exhaustion of the bullion was surmounted, and the adverse exchanges corrected, by a resolute and extraordinary degree of contraction of the circulation; in other words, the principle of the Act of 1844 was applied by anticipation, and was found effectual, 4176.

Statement with reference to the severe crisis and panic in 1792 and 1793, showing the tendency of banks to over-issue in a period of excitement, and the inevitable and disastrous results which follow from such over-issues, 4177.

Statement to the effect that, as regards the crisis of 1797, it would have been got over if the Bank had continued to suppress notes as the gold went out, 4178, 4179——Doubt, however, with regard to the pressure in 1797, whether the Suspension Act was not a justifiable measure, 4179——Inference, from the circumstances of the crisis of 1797, opposed to an extension of the issues upon securities, *ib.*

Statement showing that, in the year 1800 and following years, there was a considerable excess of issue of paper money, 4180——The non-convertibility of the note at this period had nothing to do with the power of issuers to put out their notes in accordance with the demand for them, *ib.*

Reference to the resumption of cash payments in 1819, and to the Act then passed by Sir Robert Peel, as having restored the money of the country to its honest value, 4181——Witness cannot understand upon what principle those who are favourable to the Act

of

Report, 1857—*continued.*

Overstone, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

of 1819, repudiate the Act of 1844; 4181——Sound views expressed by Mr. Tooke, in declaring his approval of the Act of 1819, *ib.*

With regard to the great crisis of 1825, witness adduces certain facts as clearly showing that between 1821 and 1825, there was a considerable increase in the circulation of Bank notes of 5 *l.* and upwards, 4182, 4183——Allowance to be made in considering the paper circulation respectively in 1821 and 1825, for the suppression of 1 *l.* notes, and the substitution of coin, 4182——Great reduction in the bullion in the Bank at this period, in consequence of the over-issues, *ib.*

Witness submits that it is clear to demonstration, that if the Act of 1844 had been in operation in 1824 and 1825, it must have prevented or greatly mitigated the evils which occurred, 4182——Reference to a pamphlet by Mr. Arbuthnot, and to some remarks therein upon the crisis of 1825; strong recommendation of this pamphlet to the notice of the Committee, *ib.*——In addition to the increased circulation of the Bank of England in 1825, witness cites sundry grounds for the conclusion that the country issues were greatly in excess at that period, 4182, 4183——The proposition that the paper issues were less in 1825 than the preceding years, rests upon no evidence whatever, and is a most reckless and fallacious assumption, 4182, 4183.

Statement showing the undue regulation of the paper issues in the period between 1833 and 1839, there having been a decided over-issue in the years 1837 and 1839; 4184–4187——Argument showing that the provisions of the Act of 1844, if applied in the period between 1833 and 1839, would have rendered it impossible that monetary affairs should have reached such disastrous extremities, 4184, 4185——The publication in 1833–37 of the present form of account, would have caused a salutary contraction of the currency at an earlier period, 4184, 4185.

Strong inculcation of the proposition that the ultimate effect of an over-issue of paper money must be to depreciate the aggregate currency, and to cause an exportation of coin or bullion, 4185–4188——Refutation of the doctrine that a mixed currency of paper and gold must vary as a metallic currency would vary, 4188.

Further reference to the crisis of 1847, to the effect that notwithstanding the complicated pressure upon the monetary world, the bullion reserve was effectually protected, as it never had been on any previous occasion, 4189——Further reference also to the pressure of the last two years, as clearly proving the beneficial operation of the Act of 1844, *ib.*——Commercial progress and national prosperity at the present time under the operation of the Act, 4189. 4222–4226. 4234–4236.

Witness repeats his unqualified approval generally of the principles of the Act; he looks upon it as a noble work, and feels confident that the Committee will never take upon itself the disgrace of destroying that work, 4189, 4190.

Statement showing the immense increase of paper issues by banks in the United States for several years up to 1837, and the immense disaster which resulted therefrom; there was, practically, no restriction upon issue, 4191–4194. 4240——Less disaster in America since 1842, in consequence of measures having been taken to restrain the free action of the banks; great imperfection nevertheless of the present system of banking in the several States, 4193——Reference to, and strong approval of the views expressed by the Under Secretary of the Treasury of the United States, in reference to the principles to be observed in the issue of paper money, 4193. 4216–4219.

Grounds for concluding that the Act of 1844, though passed for only 10 years, was intended as a continuous measure, that is, that its principle was intended to be permanent, 4196. 4201–4215——Reference to the Mutiny Act and other Acts, as though passed for limited periods, being intended for continuance, 4196. 4213–4215.

Further definition of the reserve of the Bank of England, that is of the Banking Department; the bullion in the Issue Department has no sort of connexion with it, 4197, 4198——Repetition of former objections to a blending of the accounts of the Issue Department and Banking Department, 4199, 4200.

Remarks upon a question put by Mr Wilson to Mr. Weguelin (Q. 913), in which he seemed to assume that Sir Robert Peel contemplated that the Act of 1844 should last for 10 years, and no longer, 4201. 4204–4212—— Modifications in the details of the Act are perfectly consistent with the intention, that it should be a permanent measure, 4202——As regards a modification with reference to the country issues, witness would approve of any practical measure for their immediate extinction, 4203.

Further statement as to the extent to which the Act provides, that there shall be gold and silver to meet the notes with the public, 4220–4222——Absence of parallel between the prosperity of the United States under a system of banking and issue to which witness so strongly objects, and the prosperity of this country under a system of which he so highly approves, 4223–4233.

Further reference to the crisis of 1797, and to the possibility of meeting the same by a different action on the part of the Bank, 4237–4239——Probable aggravation of the

Overstone, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

state of things in this country in 1837, by the demand for money in America, 4240, 4241——Repetition of former evidence as to the fluctuation in the rate of interest being dependent upon the quantity of money, or upon alteration in the relation between the demand and supply of capital, such relation being, moreover, necessarily subject to rapid fluctuation, 4242–4248.

P.

Palmer, John Horsley. Statement by Mr. Palmer, dated 15 October 1856, in consideration and decided disapproval of the Act of 1844, and suggesting certain alterations therein, and in the Act of 1845, *App. p.* 6.

Panics. A run for gold is more likely to arise through the medium of the depositors than of the note-holders, *Weguelin* 698——A general alarm as to the security of the note is too remote a contingency to constitute an argument against extended issues, *Mill* 2305, 2306——The danger of a run upon a country bank arises more from the note-holders than the depositors, *Hubbard* 2507.

The public alarm in 1825, 1837, and 1839 was beyond all doubt for the convertibility of the note, *Right Hon. Lord Overstone* 3793. 3796——The panic in 1847 was the cause of the contraction of credit, but the panic did not result from the Act, *ib.* 4084-4089.

The panic in 1847 was not through fear of the safety of the Bank of England, but in consequence of the restrictions imposed by the Act upon the Bank issues, such restrictions causing a general apprehension of want of notes, *Alexander* 4265–4270. 4274–4276. 4285–4288. 4348–4350. 4360–4362——The panic of 1847 was caused by the drain of bullion, the currency being based upon bullion, *ib.* 4501–4504——The proposed inconvertible notes would render a panic almost an impossibility, *ib.* 4800.

Anything like a panic has the effect of driving the monied interest to the Bank for supplies of money, *Chapman* 4848——Defect of the Act in not providing against a sudden withdrawal of the circulation in consequence of a panic, *ib.* 4904. 4907. 4963. 5230——Any limited amount of circulation is likely to create a panic, *ib.* 5284–5286. 5294, 5295——The currency is adapted only to the ordinary transactions of the nation, whereas a state of panic calls for an extraordinary supply, *ib.* 5284–5286. 5365, 5366.

Abundance of money after the anxiety of the public mind in October 1856 had passed away; this is always the natural result of the cessation of a panic, *Chapman* 5288–5291——Way in which the anxious feeling in October 1856, which might easily have been aggravated into a panic, as well as the anxiety in 1847, was attributable to the restriction placed by the Act upon the Bank reserve, *ib.* 5367–5382.

See also *Bullion Reserve*, 2. *Drains of Bullion and Monetary Pressures.*

Paper Currency. See *Circulation* (*Paper Currency*).

Payment of Dividends. The public dividends each quarter, as managed and paid by the Bank, amount to about 5,800,000 *l.*, *Weguelin* 146, 147——In fixing upon the Bank of England as the agent for the payment of the dividends an additional security to the creditor may have been intended, though it is not legally given, *ib.* 376. 377. 383–388——Doubt whether the state, having paid the public monies to the Bank, would, if the Bank were to become bankrupt, again be liable to the public, *ib.* 389–391——Belief that a more equable distribution of the Government payments and charges, that is, monthly instead of quarterly, would not make any material difference to the Bank, or be more convenient to the commerce of the country, *ib.* 392–405.

Advantage in the payment of the dividends by the Bank, rather than directly by Government, with notes of its own issue, *Hubbard* 2463–2472.

See also *Audit Roll* (*Payment of Dividends*).

Peel, Sir Robert (*The late*). Belief as to Sir Robert Peel having contemplated that the Act of 1844 should lead to the introduction of one common bank of issue; that is, by the gradual extinction of the country issues, *Weguelin* 166, 167. 184–188. 899. 912, 913. 941–943. 945; *Newmarch* 1399–1402; *Hubbard* 2429; *Norman* 2939–2942. 3331–3334.

The true character of the paper note was grasped by Sir Robert Peel; hence the Act of 1844, *Right Hon. Lord Overstone* 3648——Neither politically nor socially had witness any connexion with Sir Robert Peel, nor did he ever have any communication with him on the subject of the Act of 1844, *ib.* 4019-4022——The immortal gratitude of this country is due to Sir Robert Peel for the great national benefit he has conferred by the passing of the Act, *ib.* 4020——Although witness had no communication with Sir Robert Peel relative to the Act of 1844, he and others had enunciated before the Select Committee in 1840 principles similar to those which Sir Robert Peel introduced into the Act, *ib.* 4120-4124.

Reference to some conversations between witness and Sir Robert Peel during the passing of the Act of 1844, at which the latter said, in reply to witness's representations

Report, 1857—*continued.*

Peel, Sir Robert (*The late*)—continued.

tions as to the restrictions upon issue, "there is always recourse to the Queen in Council," *Chapman* 5231, 5232——Circumstance of Sir Robert Peel having addressed a note to witness in April 1847, saying how glad he was to see that the crisis had passed; there was no similar note after the real crisis in October, *ib.* 5232–5235.

Perth Banking Company. Particulars as to the amount of capital, &c., and of the authorised and actual circulation in April 1857, *App. p.* 333.

Plymouth Branch (*Bank of England*). Account of the average circulation of twenty-one days and seven days bills in each of the years 1832 and 1847, *App. p.* 24——Account of the average circulation of seven days and other bills, in each year from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each of the years from 1832 to 1847, both inclusive, *App. p.* 26——Similar account for each year from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days bills during the year 1847, *App. p.* 28, 29——Similar statement for the year 1856, *ib.* 30. 34.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

Poorer Classes. Tendency of the present currency system to exclude the poorer classes from a proper share in those improvements and comforts to which their labour so largely contributes, *Capps* 5445–5466. 5493–5497.

Portsmouth Branch (*Bank of England*). Account of the average circulation of twenty-one days and seven days bills, in each year from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days and other bills, in each year from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year from 1832 to 1837, both inclusive, *App. p.* 26——Similar account for each year from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days bills during the year 1847, *App. p.* 28, 29——Similar statement for the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

Pound Sterling. Witness looks upon the word "pound" as a term of account, and sees no intimate connexion between the value of a pound note and a sovereign, *Twells* 4644–4647. 4655, *et seq.*——Since 1819, witness has not known any discrepency between the value of the 5*l.* note and five sovereigns, *ib.* 4678–4684. 4717.

Objection to the pound being always 5 pennyweights 3 grains of gold, *Capps* 5473, 5474.

See also *Standard of Value.*

Prices. Effect of advances of capital, but not of increase of circulation, upon speculation and upon prices, *Weguelin* 1011 *et seq.* 1131–1135.

As the result of laborious investigation on the part of witness, he states that the amount of issues of paper does not exercise the least influence upon prices, *Newmarch* 1422, 1423—— Practically, where there has been a rise in prices, there has been a fall in the circulation, and *vice versâ*, *ib.* 1423——Temporary effect upon prices by undue advances of capital producing speculation, *ib.* 1635–1639——Absence, practically, of any effect upon prices by oscillations in the amount of bullion in the country, in consequence of the foreign exchanges, *ib.* 1979–1999.

Argument that the movements of bullion, and the consequent variations in the rate of interest, have no influence whatever upon prices, *Hubbard* 2400——Table delivered in (*App. p.* 290, 291), in illustration of the want of coincidence between prices and the rate of interest, *ib.* 2400, 2401——A high rate of discount has an immediate and sensible effect in causing sales of foreign securities bearing interest, though it has no effect upon the price of commodities, *ib.* 2400. 2402–2406. 2545–2555——The movement of prices determines the amount of circulation, but the circulation does not affect prices, *ib.* 2407. 2409.

Further statement that the amount of circulation does not affect prices, but is dependent upon prices, *Hubbard* 2578–2580. 2593. 2663–2666——Tendency of an expansion of prices to expand the circulation, and of a diminution of prices to contract it, *ib.* 2580. 2593. 2663–2666——A fluctuation in prices will result from an increase in the entire supply of the precious metals, but not from any alteration in their distribution from day to day, *ib.* 2581–2592——An advance in the rate of interest, and a consequent sale of securities by the commercial classes, would not necessarily have any connexion with, or effect upon, the price of wheat, or other commodities, *ib.* 2822–2837.

Action upon prices in the event of excess of issue, whether under a mixed currency, or a metallic currency, *Norman* 3050, 3051——Higher prices would partly be the effect and

Report, 1857—*continued.*

Prices—continued.

partly the cause of a temporary over-circulation, *Norman* 3152-3154. 3171——Effects of a continued adverse exchange to lead to a reduction of prices, and, *pari passu,* to diminish the coin in the hands of the public, *ib.* 3217-3221——Further statement as to the effect of an increased circulation upon prices, *ib.* 3294——The ultimate effect of increasing the quantity of money is to raise prices, not to lower interest, *ib.* 3523.

The prices of commodities are the last thing which is reached by fluctuations in the amount of money, *Right Hon. Lord Overstone* 3798, 3799——Natural effect of a rise in the rate of interest to lower the price of goods and of securities, and by increasing the value of money in the country to bring it thither from other countries, *ib.* 3805-3810.

Tendency of a scarcity of money to force sales and lower prices, *Twells* 4587-4590. 4595-4597.

Argument that under the present system, the increased price of commodities which indirect taxation renders necessary, cannot be obtained for any length of time together, because it leads to the export of gold from the country, *Capps* 5445-5451——Prejudicial effect of a heavy export of gold upon prices, *ib.* 5445-5447. 5480, 5481.

Table showing the amount of bullion in the Bank of England, the market rate of discount for good bills of exchange, and the prices of fifteen of the principal articles of commerce at the beginning of the months of March, June, September, and December, from March 1834 to December 1843, *App. p.* 290——Similar table for the months of March, June, September, and December, from March 1844 to December 1853, *ib.* 291.

Private Banks. Approval of an alteration of that clause of the Bank Charter Act which limits the partners in private banks to six, *Weguelin* 551-553.

Consideration of the question as to the Act having arrested the progress of the absorption of private banks by joint stock banks, and prevented the increase of the circulation of the latter, *Weguelin* 902-912. 920, 921. 929-935——Considerable decrease, since 1844, in the circulation of the notes of private banks, whilst the circulation of joint stock banks has remained about the same, *ib.* 902-911——Since 1833 the circulation of the private banks of issue has decreased from 8,500,000*l.* to 3,761,062*l.*, *ib.* 908——Tendency of the Act to diminish the number of private banks, *ib.* 914.

Return of the Circulation of Private and Joint Stock Banks in England, Scotland, and Ireland, in each month from September 1833 to April 1857, *App. p.* 148-152.

Account of the aggregate daily circulation of private banks of issue in England and Wales, from the 15th October 1844 to the 9th May 1857, *App. p.* 153-181.

Return showing the authorised issues of the notes of the private and Joint Stock Banks in England and Wales, and the actual amount issued, also the authorised issues of the banks in Scotland and Ireland, the actual amounts issued, and the amounts of bullion held by these banks respectively, in each week since the passing of the Acts of the 7 & 8 Vict. c. 32, and 8 & 9 Vict. c. 37 & 48, to the 9th May 1857, *App. p.* 182-203.

Account of the aggregate weekly circulation of Bank notes in the United Kingdom, distinguishing those of the Bank of England in the hands of the public, and the issues of other banks in England, Scotland, and Ireland, from 19 October 1844 to 9 May 1857, *App. p.* 214-232.

Return of the number of banks of issue and of non-issue that have been established in England and Wales in each year from 1819 to the present time, distinguishing joint stock banks from private banks; of the number which have relinquished business in each year, again distinguishing banks of issue and of non-issue, private banks and joint stock banks; and of the number which have relinquished business from failure and other causes, *App. p.* 234——Similar return as regards Scotland, *ib.* 235——Similar return as regards Ireland, *ib.* 237.

Account of the number of private banks of issue in England at the time of passing the Act of 1844, and whose issues were fixed by that Act; also the number which still continue in existence as banks of issue, and showing what number have ceased to issue, by compounding with the Bank to use Bank of England notes, and the number that have ceased by failing, *App. p.* 238.

Profits of the Bank. Profit of 80,000*l.* a year on the issue of 14,000,000*l.*, *Weguelin* 137-142——Profit of from 20,000*l.* to 40,000*l.* a year upon bullion and foreign coin; how it arises, *ib.* 140. 142. 361-363——Fluctuation in the amount of profit derived by the Bank from the employment of the public balances, *ib.* 157, 158.

See also *Lost Notes. Government Debt.*

Public, The. See *Act 7 & 8 Vict. c. 32. Bullion Reserve,* 2. *Panics. Rate of Interest,* 3, 4, 5, 6. *Trade and Commerce.*

Publication of Accounts. See *Accounts* (*Bank of England*).

Purchases of Stock, &c. Return of all purchases and sales of public stocks or Exchequer bills, severally made by the Bank of England, in each week from 21 January 1848 to 2 May 1857, and the rates of such purchases and sales, *App. p.* 242-277.

R.

Railway Securities. The Bank of England have always had a certain amount invested in railway securities, *Weguelin* 260.

Increased field for the employment of capital by bankers since the existence of railway securities, *Chapman* 5117–5121.

Return of all railroad debentures purchased by the Bank, from the period of the first transaction of this description to 10 August 1846, *App. p.* 287——Statement, dated Bank of England, 7 January 1848, that no loans have been made by the Bank to railroad companies, or on the deposit of railway stock or bonds, *ib.*——Return of all railroad debentures purchased by the Bank from the year 1848 to 1856, *ib.* 287, 288.

RATE OF INTEREST:

1. *Principles by which the Bank is guided in altering the Rate.*
2. *Power of the Governor of the Bank to determine the Rate; Practice of the Court hereon.*
3. *Extent of Fluctuation previously to and since* 1844; *how far the Effect of the Act.*
4. *Question whether Fluctuations are desirable or otherwise.*
5. *Question whether the Bank has Power to affect the Market Rate.*
6. *Circumstances, independently of the Act of* 1844, *or of the Action of the Bank, upon which the Rate depends.*
7. *Increased amount of Discounts when the Rate is high.*
8. *Proposition for Regulating by Law the Rate of Interest by the Amount of Bullion.*
9. *Objection to the foregoing Proposition.*
10. *Proposition for a minimum Rate of Four per cent.*
11. *Objection to the foregoing Proposition.*
12. *Returns containing copious Particulars as to the Bank Rate in past Years.*

1. *Principles by which the Bank is guided in altering the Rate.*

The state of the reserve as affected by the demand for bullion is the guide by which the rate of interest is regulated, *Weguelin* 32, 33. 236–242. 362. 438–440. 1257, 1258——Practice of the Bank to follow the state of the market in regard to the rate of interest, and not to lead the way in reducing or raising the rate, *ib.* 250. 269–271——Difference of opinion amongst the Bank Directors as to an increased rate of interest being the best restriction for checking an efflux of bullion, *ib.* 311. 326, 327——The London bankers and discounters frequently anticipate the action of the Bank, *ib.* 485. 492. 495–499.

Intimate connexion between the interests of the public and the Bank, though an increased rate of interest adds to the profit of the latter, *Weguelin* 513–520——The only safe rule for the Bank to adopt, is to be guided by the principle of supply and demand, and to follow the market rate, *ib.* 1200–1212——There is a resolution of the Court that the rate shall always be kept approximate to the current rate out of the Bank, *ib.* 1259.

Inexpediency of the Bank of England being guided by the same principle as ordinary bankers in the management of its reserve, with reference to the rate of discount, *Newmarch* 1359. 1363–1367. 1440——In principle, it is quite expedient that as the bullion of the Bank decreases, the rate of interest should be raised, *ib.* 1434–1437. 1459——Magnitude of the Bank's resources, and moral influence of its actions adverted to as an argument against its lending its reserve in the same way as other money lenders, *ib.* 1889–1894.

The Bank has always followed the market in varying the rate, *Hubbard* 2369——Approval of a continued action upon the rate of discount as the best mode of correcting adverse foreign exchanges, *ib.* 2568–2574——By advances in the rate of interest concurrently with the sale of securities, the Bank can always establish a proper proportion between the reserve and the liabilities, *ib.* 2768–2773.

The power of raising the rate is found a sufficient check upon the amount of discounts demanded, *Norman* 3529——The Bank rate is never so low as the lowest rate out of doors, *ib.* 3530.

Fault of the Bank if it does not strictly and speedily conform to the real market rate of interest, *Right Hon. Lord Overstone* 3657——Effect of a diminution of the Bank reserve, and of the money in the country, to cause a higher rate of interest, and an increased value of the money still in the country, thereby leading to a rectification of the exchanges, *ib.* 3937–3943. 4029–4048. 4112–4117.

Necessity of the Bank conforming to the market rate, without being much above it or below it, *Chapman* 4872–4874——A contraction on the part of money dealers, when the

Report, 1857—*continued.*

RATE OF INTEREST—continued.

1. *Principles by which the Bank is guided in altering the Rate*—continued.

bullion reserve and note reserve are low, is a wholesome and beneficial operation, provided it be a gradual contraction, *Chapman* 4930–4937——Without reference to the state of things on the Continent, the main thing is to protect ourselves by raising the rate when bullion decreases, *ib.* 5082–5086.

Remarks by Mr. Thomson Hankey, in approval of a steady advance in the Bank rate of discount as the best means of checking undue pressure, *App. p.* 23.

2. *Power of the Governor of the Bank to determine the Rate: Practice of the Court hereon.*

The governor of the Bank has power to alter the rate of interest at any time without reference to the Court, *Weguelin* 441–443. 1184–1190——The rate is usually fixed every Thursday by a majority of the Court, and the Governor rarely alters it subsequently, *ib.* 1184, 1185. 1188.

Comment on the practice of the Bank in determining the rate of interest, *Newmarch* 1398.

The rate is entirely at the discretion of the Bank Directors, *Hubbard* 2681.

3. *Extent of Fluctuation previously to and since* 1844; *how far the Effect of the Act.*

Particulars as to the changes in the Bank rate of discount since April 1855, with a view to the protection of the reserve, *Weguelin* 31–34——Since 1844, there have been a great many changes in the rate of discount, *ib.* 532, 533.

Mischievous operation of the separation of the issue and banking departments, as producing undue fluctuations in the rate of interest, *Newmarch* 1356–1360. 1363–1367. 1431–1440. 1463–1471. 1855–1857. 1869–1878——The alterations since 1844 have been 60 in number, whereas the alterations prior to 1844, in the same space of time, did not amount to a dozen, *ib.* 1358——Comment on the reduction since 1844 of the Bank rate to so low a point as 2 per cent., *ib.* 1359, 1360. 1363. 1366. 1463–1471.

Witness further contends that the Act has had a most injurious effect, inasmuch as under it the Bank has thought fit to compete with other money lenders, and has, temporarily, no doubt, caused violent and irregular changes in the rate, *Newmarch* 1879–1884. 1895, 2896.

Examination on a paper which shows that in the ten years preceding 1844 the variations in the rates of interest allowed by London discount houses to London bankers were forty-three in number, and in the ten years succeeding 1844, were only twenty in number; the variations, however, since 1844 have been much greater in amount, *Newmarch* 1968–1977——In the ten years previous to 1844, the highest Bank rate was 5½ per cent., and the lowest rate 1½ per cent., showing an extreme variation of 4 per cent., *ib.* 1975——In the ten years since 1844, the highest Bank rate was 8 per cent., and the lowest rate 2 per cent, *ib.*

Effect of the separation of the departments in leading to more frequent and violent fluctuations in the rate of interest than was previously the case, *Mill* 2026–2029. 2032–2038. 2068–2070. 2102–2119. 2247–2259.

The separation of the departments has had nothing to do with the fluctuations in the rate, *Hubbard* 2365. 2366. 2380–2382. 2761, 2762——Witness delivers in a table showing the periods and extent of variation in the rate of discount at the Bank of England from 1844 to 1856, together with the amount of reserve and amounts under discount at the same period: remarks thereon, *ib.* 2759, 2760.

Denial that the separation of the departments has had any effect in regard to the fluctuations, *Norman* 2964. 2968–2981. 3005–3007——Probability of the rate of interest having varied more since the Act of 1844 than previously, *ib.* 3520.

Witness denies that the fluctuations have been greater since 1844 than they were in former years; facts in support of this statement, *Right Hon. Lord Overstone* 3653. 3661, 3662. 3847——Evidence in refutation of the statement that the separation of the departments has acted injuriously as regards the bullion reserve and the rate of interest, *ib.* 3653. 3661, 3662. 3961–3968——Effect of the Act of 1844 to cause very frequent alterations in the rate of interest, but very small in extent, and extremely salutary in their operation as compared with the fluctuations under former systems, *ib.* 3778–3786.

Effect of the restrictions of the Act in raising the rate of interest, *Alexander* 4325–4329.

The rate of discount remained at 5 per cent. from about 1800 to 1822, and was adopted generally by bankers and bill brokers; this was the result of the steadiness of the currency, *Twells* 4420–4438——From 1819 to 1844, the rate changed probably from 40 to 50 times, whereas previously, it was uniformly 5 per cent., *ib.* 4486——Failure of the Act of 1844, in its object of preventing the recurrence of such fluctuations as those of 1824, 1829, and 1830, *ib.* 4507–4511——Looking to the experience of the earlier part of the centuyr

RATE OF INTEREST—continued.

3. *Extent of Fluctuation previously to and since* 1844, *&c.*—continued.

century, witness considers that regularity in the rate of discount is not impossible, *Twells* 4512——The natural tendency of an accumulation of capital as in this country should be, to lower the rate of interest, whereas the present restrictions periodically force up the rate, *ib.* 4614, 4615——Although the rate of interest has at times been very low since 1844, bankers have greater means of making profits than they previously had, *ib.* 4781–4795.

Tabular statement of the rates charged by witness's house from 1824 to 1857; impression that the rates since the Act have been lower than they were previously, *Chapman* 4876—— Considerable inequalities in the several years from 1824 to 1844, *ib.* 4876, 4877.

Witness considers that the fluctuating and high rates of interest for several years past are the result of an Act of Parliament, and might be prevented by an Act of Parliament, *Capps* 5430. 5469–5472.

Violent fluctuations in the rate of interest adverted to by Mr. Bonamy Dobree as not guarded against under the Act of 1844, *App. p.* 21, 22.

4. *Question whether Fluctuations are desirable or otherwise:*

Evils consequent upon frequent fluctuations in the rate of interest as has been the case since 1844, *Newmarch* 1357–1360, 1430–1440. 1472–1480. 1879–1884. 1895, 1896; *Mill* 2,026 *et seq.*

The variations in the rate of interest can hardly have had any injurious effects upon commerce, inasmuch as the Bank discounted 25,000,000*l.* in one year without incurring any bad debts, *Hubbard* 2774–2777.

Salutary effect of rises in the rate of discount, and of contraction of trade when there is an undue demand for capital, *Right Hon. Lord Overstone* 3654–3657. 3718——The more frequent the variations are, the more minute they will be, and the more effectually will accomplish their object, *ib.* 3718. 3782–3786——The idea of the profits of trade being destroyed by high rates of interest is most erroneous, *ib.* 3722 *et seq.*; 3815–3817. 3847 *et seq.*——Soundness of the principle that the price paid for the use of loanable capital should vary in accordance with the supply of such capital, *ib.* 3854–3858.

The more equable the rate is, the better for merchants generally, *Alexander* 4326. 4363.

Fluctuations may well be acceptable to bankers and money-dealers, but not to commercial men or small tradesmen, *Twells* 4493. 4612–4616. 4649–4654——Less steadiness in trade in consequence of the fluctuations, *ib.* 4605. 4617——Violent fluctuations tend towards making the rich man richer and the poor man poorer, *ib.* 4608.

An increased rate of interest is the only safety-valve when the bullion is diminishing, *Chapman* 4937——Extent to which advances in the rate of discount attract capital from abroad, *ib.* 5068–5074——Tendency of a lower rate in this country than on the Continent to drive money abroad, *ib.* 5075–5081——A continuance of a high rate of interest is an indication of prosperity, *ib.* 5143–5149.

5. *Question whether the Bank has Power to affect the Market Rate:*

Absence of power in the Bank to regulate, for any time, the market rate of interest, *Weguelin* 251, 252. 269–271. 475 *et seq.*, 1191–1199——Wide distinction between the market rate of discount and the rate of interest, *ib.* 480–483——Limited extent to which the bankers regulate their rate by the Bank rate, *ib.* 488–496.

Under certain conditions only of the money market does the Bank influence the rate of interest, and then only temporarily, *Newmarch* 1440. 1460–1462——In a falling market the Bank has had the effect of driving down the rate lower than it would have gone of its own accord, *ib.* 1460, 1461. 1879. 1886——In times of commercial difficulty the Bank rate has a material effect upon the rate in the market, *Mill* 2038. 2149–2151. 2258, 2259.

Except under very partial and peculiar circumstances the Bank has no power at all over the rate of discount, *Hubbard* 2365–2369. 2372; *Norman* 2971–2975. 3000–3004——But few persons can be so foolish as to believe that the Bank fixes the rate of discount, *Norman* 2974. 3000–3003——Further statement that, save at exceptional periods, such as the end of a quarter, the Bank of England has no power to affect the market rate, *ib.* 3526.

Argument that all great changes in the rate of discount are not the result of changes in the amount of bullion or money in the Bank, but have reference to the relation between the supply and demand of capital, *Right Hon. Lord Overstone* 3652, 3653. 3718. 3722 *et seq.* 3746–3755. 3782. 3804. 3847. 4242–4248——Fallacy of the term "raising the rate of discount," as applied to the Bank, *ib.* 3800——The value of money rises by natural circumstances, and the Bank is obliged to conform to that rise, or, in other words,

Report, 1857—*continued.*

RATE OF INTEREST—continued.

5. *Question whether the Bank has Power to affect the Market Rate*—continued.

a higher rate of interest is forced upon the Bank, *Right Hon. Lord Overstone* 3800–3808——The Bank has no arbitrary power whatever of raising or lowering the rate of interest, *ib.* 4006, 4007. 4064, 4065.

Evidence to the effect that the market rate of discount is at times influenced by the Bank rate, and that the Bank rate is also at times influenced by the market rate, *Chapman* 4839–4848. 4864–4874——Influence of the Bank with regard to the rate at periods when the supply of money in the market is so low as to compel the public to have recourse to the Bank; this is especially the case at the end of each quarter, before the payment of the dividends, *ib.* 4840–4844——Effect of a diminished circulation in the hands of the public in giving to the Bank a control in regulating the rate, *ib.* 4844–4848.

Practice of witness's house in regard to the rate of discount; attention necessarily paid to the Bank rate, whilst at the same time the state of the market is the chief guide, *Chapman* 4863–4871——Lower rate charged on the average by witness's house than by the Bank, *ib.* 4865–4869——Tendency of competition in the market to bring the rate out of doors below the Bank rate, *ib.* 4866–4871——Practically, the Bank rate operates as a sort of maximum to private discount, *ib.* 4866——Statement to the effect that when the rate of interest is low, the market rate is a little below the Bank rate, and when it is high, is a little above the Bank rate, *ib.* 5087–5096.

6. *Circumstances, independently of the Act of* 1844, *or of the Action of the Bank, upon which the Rate depends:*

Fluctuations in the rate of discount are unavoidable, *Weguelin* 513. 519——The fact is that the variations in the rate of interest arise from causes which are in the hands of Providence itself, *Hubbard* 2365——Close affinity between the movements in the amount of bullion and the rate of interest, *ib.* 2400——The rate of discount is now, to a considerable degree, self-acting, *ib.* 2848.

Absence of any close relation between the rate of discount and the rate of interest upon Government securities, *Norman* 2998, 2999——Slight and temporary effect of the amount of notes with the public on the rate of interest, *ib.* 3521. 3523——Opinion that the rate permanently depends upon the demand and supply of capital, *ib.* 3522, 3523——Tendency of a contraction of the currency to raise the rate of interest, and of an expansion of the currency to lower the rate, *ib.* 3523.

All great fluctuations in the rate are the result of alterations in the value of capital or in the amount of money in the country, *Right Hon. Lord Overstone* 3652, 3653. 3718. 3749–3755. 3782. 3802–3804——Evidence relative to the high rate of interest during the last few years, to the effect that the same is mainly owing to the immense development of the trading operations of this country and of the world, and the consequent increase in the value of capital, *ib.* 3718. 3722 *et seq.*; 3804. 3847——Close relation between variations in the rate of interest and the state of the reserve, on the ground that the reserve is the indicator of the increase or decrease of the quantity of money in the country, *ib.* 3841——Denial that fluctuations are avoidable so far as the Bank is concerned, *ib.* 3847.

Repetition of former evidence as to the fluctuations in the rate of interest being dependent upon the quantity of money or upon alteration in the relation between the demand and supply of capital, such relation being moreover necessarily subject to rapid fluctuation, *Right Hon. Lord Overstone* 4242–4248.

Material effect upon the rate of discount of a demand for money upon consols or Exchequer bills, *Chapman* 4886–4890——Absence of close relation between a rise in the rate of discount and a fall in the price of funds, *ib.* 4888–4894——Natural consequence of increased demand for capital that the rate of interest is higher, *ib.* 5142, 5143.

7. *Increased Amount of Discounts when the Rate is high:*

Larger amount of Bank discounts in proportion as the rate is high, *Weguelin* 269; *Mill* 2148; *Hubbard* 2376–2379; *Norman* 2994–2997——Tabular statement delivered in, containing particulars as to the Bank rate from 1844 to 1856, and showing that the Bank discounts are greatest when the rate is highest, *Hubbard* 2759, 2760——Amount of discounts of witness's house in proportion to the rate, whether high or low; they are very large under the present high rate, *Chapman* 5155–5161. 5322–4326.

8. *Proposition for regulating by Law the Rate of Interest by the Amount of Bullion:*

Suggestion that the Bank be compelled by law to vary the rate of interest in accordance with the amount of bullion; the rate should be fixed at 5*l.* per cent. when the bullion is at 10,000,000*l.*, and should rise a half per cent. with every 500,000*l.* of fall, *Chapman* 4938. 4978–4999——When the bullion would be down to 5,000,000*l.* the rate would be ten per cent., which would be sure to check the drain, *ib.* 4979. 5175. 5332——Importance of making it imperative on the Bank to raise the rate as the bullion falls, *ib.* 4983. 4999.

Witness

Report, 1857—*continued.*

RATE OF INTEREST—continued.

8. *Proposition for regulating by Law the Rate of Interest, &c.*—continued.

Witness does not propose to interfere with the discretion of the Bank in regard to the rate of interest when the bullion is above 10,000,000 *l.*, *Chapman* 4984-4987——Witness sees no objection to the same rate in accordance with the amount of bullion, whether the bullion be falling or increasing at the time, *ib.* 4993-4998.

The maintenance of specie payments being the first thing absolutely necessary, it is of essential importance that a contraction of the currency be compulsory when the bullion falls, *Chapman* 5006. 5057. 5067. 5174——Importance of raising the Bank rate to ten per cent. when the bullion is at 5,000,000 *l.*, in order to protect payments in specie, *ib.* 5332. 5340-5342.

9. *Objection to the foregoing Proposition:*

Evidence opposed to a proposition for regulating by law the rate of interest by the stock of bullion, and for issuing upon securities at a high rate in proportion as the bullion decreases, *Weguelin* 306-322.

A restriction upon the rate of interest would be better than a restriction upon the amount of bullion; witness is not however prepared to recommend the former, *Mill* 2015. 2070, 2071.

Inexpediency of a mechanical self action by which the rate should fluctuate, with reference solely to the amount of the reserve, *Hubbard* 2849-2851——A power in the Bank to raise and lower the rate at its discretion is absolutely essential, *Norman* 3532.

10. *Proposition for a Minimum Rate of Four per Cent:*

Evidence in favour of the adoption by the Bank of a rule not to discount at a lower rate than four per cent., *Newmarch* 1360-1362. 1440-1458. 1494-1497——Circumstance of the Bank having never discounted at a lower rate than four per cent. previously to 1844, *ib.* 1361. 1450-1454. 1527——It is inexpedient that the Bank should ever reduce its rate very low, notwithstanding that its reserve of bullion may be very large, *ib.* 1438-1447——Different modes in which the Bank might employ its money, even at a lower rate than four per cent., without lending it on bills of exchange at such lower rate, *ib.* 1448-1458. 1526, 1527——Claim of the Bank to additional compensation if they be restricted in regard to the rate of interest, *ib.* 1553. 1901-1903.

Further evidence in favour of the Bank being restrained, but not by Act of Parliament, from discounting at less than four per cent.; objections to this proposition considered, *Newmarch* 1880. 1885-1904.

11. *Objection to the foregoing Proposition:*

The proposition of Mr. Newmarch that the Bank rate should never be less than 4 per cent. is extremely unsound, and might moreover be easily evaded, *Hubbard* 2370-2375——Disapproval of the Bank being limited to a minimum rate of discount of 4 per cent., *Norman* 2978——Objections to the proposal that the Bank should be restricted to a minimum rate of 4 per cent., *Right Hon. Lord Overstone* 3658-3660——Total disapproval of legislating for a permanently low rate, *Chapman* 4938-4940.

12. *Returns containing copious Particulars as to the Bank Rate in past Years:*

Return of the several Rates at which the Bank of England has advanced money on loan, with the date at which each such rate has been established, and the period during which it has prevailed, and the amount of money advanced under such rate, from the 1st of January 1844 to the 1st of January 1848, *App. p.* 36-43——Similar return for the period from the 8th January 1840 to the 27th December 1856, *ib.* 44-61.

Return of the highest and lowest rates at which the Bank has advanced money on loan or discount, with the date at which each such rate has been established, and the period during which it has prevailed, and the amount of money advanced under each such rate, from the 1st of January 1844 to the 24th of December 1847, *App. p.* 62-67.

Return of the several rates at which the Bank has discounted bills of exchange, together with the weekly amount of the money discounted under each rate, from the week ending 1st January 1848 to the week ending 27th December 1856, both inclusive, *App. p.* 68-81.

Account of the minimum rate of interest charged by the Bank, from the last day of each week, from the 7th September 1844 to the 24th December 1847, *App. p.* 114-119——Similar account from the last day of each week, from the 1st January 1848 to the 27th December 1856, *ib.* 120-135.

Account of the minimum rates of interest charged by the Bank, from the last day of each week, from the 7th September 1844 to the 27th December 1856, *App. p.* 136-147.

Report, 1857—*continued.*

RATE OF INTEREST—continued.

12. *Returns containing copious Particulars as to the Bank Rate, &c.*—continued.

Return of the amount advanced for temporary loans, and of the rate of interest thereon, upon Exchequer Bills, bills of exchange, India bonds, &c., in each quarter, from 5th April 1848 to the 5th of January 1857, *App. p.* 283.

Return of the highest and lowest rate of interest charged by the Bank on all loans or discounts in each month from 1st January 1848 to 31st December 1856, distinguishing loans on security of real estate, loans on stock or public securities, and the discount of commercial paper, *App. p.* 284, 285.

Return of all loans to canal, dock, or other such public companies, or on the deposit of securities of such companies; stating the rate of interest charged on each call or loan, from the 1st January 1832 to 1847, *App. p.* 286——Similar return for the period from 1848 to 1857, *ib.*

Table showing the amount of bullion in the Bank of England, the market rate of discount for good bills of exchange, and the prices of fifteen of the principal articles of commerce at the beginning of the months of March, June, September and December, from March 1834 to December 1843, *App. p.* 290——Similar table for the months of March, June, September and December, from March 1844 to December 1853, *ib.* 291.

Return of the minimum rate of discount on each Saturday during the drain of 1846-47, and the pressure from the autumn of 1853 to the summer of 1857, *App. p.* 302-305.

Statement of the total amounts in bills of exchange (inland bills), drawn or created in England and Wales, during each quarter of the twenty-four years, 1830-1853; distinguishing the three groups of small, medium, and large bills; with a collateral column of the rate of interest in London on first-class bills during each quarter, and also of the average circulation during each quarter, of the notes of the Bank of England, and of the notes of private and joint-stock banks of England and Wales, *App. p.* 324-326—— Explanatory remarks by Mr. Newmarch on the foregoing return, *ib.* 326, 327.

See also *Bills of Exchange. Discounts. Drains of Bullion and Monetary Pressures Overend, Gurney, & Co. Prices. Separation of Issue and Banking Departments*, 2. 3. *Speculation. Term of Bills. Tooke, Mr. Trade and Commerce. Usury Laws.*

Readman, George. Letter from Mr. Readman, manager to the Clydesdale Banking Company, to Sir G. C. Lewis, dated 14 February 1857, complaining of the operation of the Act 8 & 9 Vict., c. 38, in regard to the unincorporated banks of Scotland, and suggesting important alterations in the Act, *App. p.* 331, 332——Statement also in this letter with reference to the prejudicial operation of the Act 9 & 10 Vict. c. 75, *ib.* 331.

Re-appointment of Committee. The Committee recommend that a Select Committee be appointed to resume the inquiry in the ensuing Session, *Rep. p.* iii.

Re-discounts. Inexpediency of the discount houses going to the Bank to discount their bills, save under exceptional circumstances, *Chapman* 5196——The practice of the London joint-stock banks not to re-discount their bills is different from the practice of the discount-houses, *ib.* 5211-5216.

Relaxation of Act of 1844. See *Discretionary Issue. Drains of Bullion and Monetary Pressures*, II. 2, 3. *Extension of Issue. Government Interposition.*

Renewal of Act of 1844. See *Act* 7 & 8 *Vict.* c. 32.

RESERVE OF BULLION (ISSUE DEPARTMENT):

1. *Primary Importance of Attention by the Bank to the State of the Bullion Reserve.*
2. *Larger Reserve in consequence of the Act of* 1844.
3. *Causes, other than the Provisions of the Act, to which the increased Reserve may be owing.*
4. *Feeling of the Public in regard to the State of the Reserve.*
5. *Proposition for an Average Reserve of from Ten to Twelve Millions.*
6. *Evidence opposed to the foregoing Proposition.*
7. *Other Evidence of a general Nature.*
8. *Returns containing Particulars as to the Reserve at different Periods.*

1. *Primary Importance of Attention by the Bank to the State of the Bullion Reserve:*

Main duty of the Bank to watch its reserve, and thereby to maintain its credit, *Weguelin* 620-626——Bank notes not being a legal tender by the Bank, it is essential that the reserve should consist of gold, *ib.* 634-641——In the management of the Bank the main thing to look to is the proportion of unemployed bullion, *Weguelin* 1164, 1165; *Hubbard* 2767——Witness decidedly objects to any issue of notes by the Bank of England, or any other bank, unless there be an ample reserve of gold in the one case, and of Bank of England notes or gold in the other case, wherewith to pay the notes of issue, *Weguelin* 1331.

The

Report, 1857—*continued.*

Reserve of Bullion (*Issue Department*)—continued.

1. *Primary Importance of Attention by the Bank to the State, &c.*—continued.

The security of our monetary system depends upon the maintenance of the reserve, *Right Hon. Lord Overstone* 4014.

Any provision for an occasional enlargement of the circulation must still have reference to the bullion, *Chapman* 4905——A contraction of the currency, when the reserve falls, is a matter of the first importance; suggested compulsory action of the Bank hereon, *ib.* 4938. 4978 *et seq.* 5332. 5340–5342.

Remarks by Mr. Weguelin, in letter of 10 November 1856, upon the expediency, under any system of issue, of keeping up a certain metallic reserve, *App. p.* 2.

2. *Larger Reserve in consequence of the Act of* 1844:

Favourable working of the Act shown by the fact, that the stock of bullion was never less than nine and a half millions in 1856, whereas in 1825 it was reduced to 1,261,000 *l.*, and in 1839 to 2,406,000 *l.*; *Weguelin* 25–29——With the view of ensuring the convertibility of the note, the Act of 1844 has compelled the Bank to keep a larger amount of bullion than previously, no reserve having formerly been required against the circulation, *ib.* 877, 878. 889, 890——The comparatively large reserves of bullion held by the Bank since 1844 are attributable to the discretion in the management, and not to the restrictions in the Act; without the Act there would be the same obligation felt to return a sufficient reserve of bullion, *ib.* 1222–1232.

Opinion that the reserve of gold being greater since 1844 is in consequence of the Act, *Neave* 1224.

Grounds for concluding that the practical effect of the Act has been largely to increase the reserve of bullion in the Bank, *Hubbard* 2341–2347. 2644. 2682——Since 1844 it has been almost impracticable to reduce the reserve under 8,000,000 *l.*; *ib.* 2343, 2344——In limiting the amount of the credit issue, the Act of 1844 necessarily provides in practice, though not in law, for a reserve of bullion, *ib.* 2728–2732. 2739–2741——Under the Act of 1844 it is almost impossible for the bullion reserve to be reduced to 2,000,000 *l.*; *ib.* 2797.

Belief that the larger bullion reserve of the Bank since 1844 has been mainly owing to the Act of that year, *Norman* 2877–2887.

Effectual protection of the bullion reserve, under the operation of the Act, as shown in the drains of 1847 and 1856–57, *Right Hon. Lord Overstone* 3648——Explanation of the mode in which the Act necessarily provides against undue reduction in the amount of bullion, *ib.* 3649–3651——Argument that the import of gold from Australia and California has had nothing to do with the increased reserve, *ib.* 3649.

3. *Causes, other than the Provisions of the Act, to which the increased Reserve may be owing:*

The larger bullion reserves of the Bank since 1844 are attributable to the influx of gold from Australia, &c., and not to the operation of the Bank Charter Act, *Newmarch* 1348–1354. 1427–1429. 1508, 1509——Further statement in support of the opinion that the larger reserve of bullion in the Bank, at different periods since 1844, is not owing to the Act of that year, *ib.* 1716–1726——Increase, on the whole, in the reserve of bullion in 1855 and 1856, as compared with 1843 and 1844, *ib.* 1907–1911.

Doubt whether the operation of the Act has caused the larger reserve which the Bank has held since 1844, *Mill* 2022–2026——Causes independently of the Act which may account for the larger reserve since 1844, *ib.* 2023, 2024——Large amount of bullion in the Bank in 1844 before the Act came into operation, *ib.* 2206–2209.

A portion of the increase is probably owing to the increased import of gold, *Norman* 2883–2887——The increased reserve is largely attributable to the increased imports from California and Australia, *Twells* 4591; *Chapman* 5310–5314.

4. *Feeling of the Public in regard to the State of the Reserve:*

Absence, generally, of anxiety in the public mind with regard to the state of the reserve, *Weguelin* 35——The wrong inferences occasionally drawn by the public from a diminution of the reserve, when effected by internal demand, do not supply a sufficient reason for an alteration of the law, *ib.* 61–63——Probability of the public having, in time, greater confidence in the Bank operations, though the reserve may be low, *ib.* 62, 63——The periodical diminution of the reserve is well understood by the Bank, though it may, as in October 1847, unduly alarm the public, *ib.* 401–405.

Natural anxiety of the public in regard to the state of the Bank reserve, *Right Hon. Lord Overstone* 3838–3840; *Chapman* 5302–5304——Feeling of the public as to the effect of the amount of the reserve upon the rate of interest, *Right Hon. Lord Overstone* 3840——Any withdrawal from the reserve, whether under a mixed circulation, or a metallic circulation, will at once have a powerful and salutary effect upon the action of the public, *ib.* 3933–3943.

Report, 1857—*continued.*

Reserve of Bullion (*Issue Department*)—continued.

4. *Feeling of the Public in regard to the State of the Reserve*—continued.

Whether the till of the Banking Department is more or less full of notes the public should be warned as early as possible of a falling bullion, *Chapman* 4975-4977. 5006. 5014. 5057-5061——Necessity of money dealers acting with great care when they see that the money is diminishing, and that the reserve of notes is small, *ib.* 5057-5063——The alarm of the public does not arise from fear of the solvency of the Bank, *ib.* 5303, 5304.

5. *Proposition for an Average Reserve of from Ten to Twelve Millions:*

Concurrence in Mr. Tooke's view that the Bank should hold a reserve in bullion of not less than 10,000,000*l.* or 12,000,000*l.* to be determined upon a principle of an average of years, *Newmarch* 1368-1392——An arrangement for a larger average store of bullion, as proposed by Mr. Tooke, should involve compensation to the Bank, *ib.* 1369. 1382. 1489——Advantage of an arrangement like the foregoing being settled between the Government and the Bank, and not defined by Act of Parliament, *ib.* 1368. 1378-1392——The amount of bullion which witness suggests that the Bank should hold would form a portion of the assets, and would be a guarantee equally for the deposits and the circulation, *ib.* 1490-1493——The maintenance of a certain amount of bullion in proportion to the total liabilities of the Bank, might be effected by the Bank not reducing its rate of interest below a certain point, such as 4 per cent.; explanation hereon, *ib.* 1494-1507.

The proposition by Mr. Tooke, that the Bank should keep an average reserve of 12,000,000*l.* in bullion could not be enforced by law, *Mill* 2012-2014——Sounder principle involved in Mr. Tooke's proposition than in the existing limit upon issue, *ib.* 2016-2019——There should be some understanding as to the reserve of bullion to be held; the sum specified might be from 10,000,000 *l.* to 12,000,000*l.*, *ib.* 2072. 2075. 2185.

Recommendation by Mr. Blair, manager of the Bank of Scotland, that the Bank should hold an additional reserve of 3,000,000*l.*, *App. p.* 329.

6. *Evidence opposed to the foregoing Proposition*:

Inexpediency of a system of compensation to the Bank, with a view to the maintenance of an increased reserve to meet any subsequent pressure, *Weguelin* 265-268.

Arguments opposed to the proposition of Mr Tooke and Mr. Newmarch, that the Bank should keep an average of about 10,000,000*l.* or 12,000,000*l.* in bullion without any limit upon issue, *Hubbard* 2349-2353——The plan of Mr. Tooke would be very costly and cumbrous without obtaining any useful object, *ib.* 2349, 2350——Inadequacy of a stipulated amount of reserve as a means sufficient of itself to meet the pressure of 1847, or of the late war, *ib.* 2393-2396.

Witness totally dissents from the doctrine, that if the Bank hold a certain large amount of bullion, a drain upon it may be suffered to run its course without doing any mischief, *Norman* 3516-3519.

7. *Other Evidence of a general Nature:*

The Bank reserve is not influenced in the same way as the reserve of ordinary bankers, and chiefly depends upon the state of the exchanges, *Weguelin* 8-11. 237-241——As a rule, variations in the bullion depends upon variations in the advances upon securities, *ib.* 1125-1128——The whole object of the Act of 1844 would probably be gained if the Bank were required to keep a certain amount of bullion in proportion to its circulation and deposits, *ib.* 1166, 1167.

The reserve of the Bank of England stands in a very different position towards the public from what the reserve of a private bank does, *Newmarch* 1364. 1415. 1440——As a general rule, the Bank may be said to be passive in regard to any decrease or increase of the bullion reserve, *ib.* 1497——The notes in the Banking Department witness always looks upon as constituting the bullion reserve, *ib.* 2004.

Necessity of clearly distinguishing between the issue and banking departments in considering the effect of the Act upon the reserve of the bullion, *Mill* 2021, 2022. 2026——Mischievous operation of the Act in requiring, for the sake of safety, a larger reserve than the Bank has at times held, *ib.* 2022. 2026. 2032-2034. 2292-2297.

Causes of fluctuation in the bullion; the cashment of debts due by foreign countries tends to an increase in the bullion, *Hubbard* 2560-2566——The reserve of the Bank is dependent on the discretion with which the business is conducted, but the bullion in the Issue Department is not dependent on the same discretion, *ib.* 2682-2685.

Reference to a suggestion by witness fourteen years ago, with a view to retaining a sufficient proportion of bullion to the entire currency under certain contingencies, producing a diminished currency, or an enlarged currency, *Hubbard* 2744——Any permanent scheme should be accompanied by some provision for keeping a reserve of bullion sufficient to meet unforeseen contingencies, *ib.*

In

Report, 1857—*continued.*

Reserve of Bullion (Issue Department)—continued.

7. *Other Evidence of a general Nature*—continued.

In the time of a purely metallic currency, and equally in the case of mixed currency, witness would consider the bullion reserve in the Bank as part of the currency or "money" of the country, *Norman* 3209-3216.

The bullion is not in the Bank of England at all, but in the Issue Department, *Right Hon. Lord Overstone* 3649. 4168, 4169——The bullion in the Issue Department cannot, as well as the rules which represent such bullion, form part of the currency, *ib.* 3880. 4163-4166——The bullion in the Issue Department represents equally the notes in the hands of the public and of the Banking Department, *ib.* 3945.

8. *Returns containing Particulars as to the Reserve at different Periods:*

Return of the lowest amount of bullion in the Bank in the years 1825, 1837, 1839, 1847 and 1856; the lowest amount was 1,261,000 *l.* in 1825, *App. p.* 89.

Account of the amount of all bullion held by the Bank on the 28th February and the 31st August in each year, from 1778 to 1847 inclusive, *App. p.* 90-92——Similar account for each year, from 1848 to 1856, *ib.* 93.

Account of the gold coin and bullion, and of the silver bullion of the Issue Department as published weekly in the "Gazette," since the passing of the Act 7 & 8 Vict. c. 32, from 31st August 1844 to 25th December 1847, *App. p.* 94-99——Similar account for each week, from 1st January 1848 to 27th December 1856, *ib.* 100-113.

Account of the total amount of bullion in the Bank on the last day of each week, from the 7th September 1844 to the 24th December 1847, *App. p.* 114-119——Similar account from the last day of each week from the 1st January 1848 to the 27th December 1856, *ib.* 120-135.

Accounts of the total amount of bullion held by the Bank of England from the last day of each week, from the 7th September 1844 to the 27th December 1856, *App. p.* 136-147.

Amount of bullion in the Bank in each month from September 1833 to April 1857, *App. p.* 148-152.

Total of 10,343,710 *l.* as the bullion in the Bank on the 28th February 1857, *App. p.* 233.

Table showing the amount of bullion in the Bank of England, the market rate of discount for good bills of exchange, and the prices of fifteen of the principal articles of commerce at the beginning of the months of March, June, September and December, from March 1834 to December 1843, *App. p.* 290.

Similar table for the months of March, June, September and December, from March 1844 to December 1853, *App. p.* 291.

Return of the bullion in the Bank on each Saturday during the drain of 1846-47, and during the period of pressure from the autumn of 1853 to the summer of 1857, *App. p.* 302-305.

Gold. Issue Department. Rate of Interest. Reserve of Notes and Bullion (Banking Department). Restriction upon Issue,* I. *Sales of Securities. Separation of Issue and Banking Departments,* 2. 3. *Term of Bills.*

Reserve of Bullion (Country Banks of Issue). Return showing the authorised issues of the notes of the private and joint-stock banks in England and Wales, and the actual amount issued; also the authorised issues of the banks in Scotland and Ireland, the actual amounts issued, and the amount of bullion held by the banks respectively, in each week since the passing of the Acts of the 7 & 8 Vict. c. 32, and 8 & 9 Vict. c. 37 & 38, to the 9th May 1857, *App. p.* 182-203.

Account of the aggregate weekly circulation of the notes of banks of issue in Scotland and Ireland, distinguishing those of 5 *l.* and upwards, and those under 5 *l.*, and showing the total amount in Scotland and Ireland respectively, with the amount of bullion held, from the 13th December 1845 to the 9th May 1857, *App. p.* 204-213.

Reserve of Notes and Bullion (Banking Department). Respect in which the Bank reserve differs from the reserve of other bankers, and is not influenced by the same circumstances, *Weguelin* 8-11. 237-241——In the Banking Department the reserve of notes and gold was never below 3,000,000 *l.* in 1856, *ib.* 26. 35——The lowest state of the reserve is about three weeks after the payment of the dividends, *ib.* 34. 40. 64. 67——Objections to any close investment of the reserve; discretion at present of the Bank Direction in regard to the investment of its reserve, *ib.* 247-249.

Evidence as to its being considered expedient to maintain a reserve of not less than one-fourth of the deposits; reduction of the reserve to three millions in October last adverted to hereon, *Weguelin* 259. 276-283——The amount of the reserve depends on the

Report, 1857—*continued.*

Reserve of Notes and Bullion (*Banking Department*)—continued.

the value of money, a large reserve being unavoidable when money is abundant, *Weguelin* 263. 265. 268, 269——Belief that the reserve of the Bank of England is larger than the reserve of private banks, as well as of joint-stock banks; necessity of this, *ib.* 284-286. 328, 329——The banking reserve, though consisting only of the notes not in active circulation, is in point of fact a reserve of bullion, and is only affected by a demand for bullion, *ib.* 300-302.

The Act of 1844, though altering the power of the Bank over the bullion, is perfectly simple and easy of application as regards the reserve, *Weguelin* 302-305——The Bank reserve is not affected by demands for discount, unless the demands are satisfied in the shape of bullion, *ib.* 499, 500——The periodical fluctuations caused in the reserve of notes by the payment of dividends, &c. amount to about 2,000,000 *l.* or 2,500,000 *l.*, *ib.* 1122-1124——Great effect of the reserve of the Bank upon the trade of the country; it represents the accumulation of unemployed capital, *ib.* 1130.

The notes issued from the Issue Department to the Banking Department are clearly not a liability on the part of the Bank, as not being in the hands of the public, *Newmarch* 1685, 1686——The notes in the Banking Department should be considered as equivalent to so much gold, *ib.* 1873, 1874.

The average amount of bullion in the Banking Department is not more than about 600,000 *l.*, *Hubbard* 2327——The reserve of notes in the department is a voucher for so much bullion, precisely in the same way that notes in the hands of the public are vouchers for bullion, *ib.* 2328-2331.

Illustration showing that the notes in the Bank, or the Bank reserve, are of the greatest importance with regard to the monetary operations of the country, and practically are a most active portion of the circulation, *Right Hon. Lord Overstone* 3832-3836. 3890, 3891. 3900——Intimate connexion between the state of the reserve of the Bank and of the bullion in the Issue Department, *ib.* 3842.

Remarks with reference to a statement by witness in 1840, that the notes in the hands of the public should conform to the fluctuations in the amount of bullion; explanation that there was at this period no accurate knowledge of the state of the reserve in the Bank, *Right Hon. Lord Overstone* 3892-3907——The want, previously to 1844, of a proper definition and limit of the Bank reserve, was the cause of numerous evils which the present Act has entirely guarded against by supplying the want in question, *ib.* 3895.

The reserve of the Bank consists of that amount of notes issued by the Issue Department which is not elsewhere than in the Bank, the Bank having power to convert such notes into bullion by presenting them at the Issue Department, *Right Hon. Lord Overstone* 3944. 3960——Necessary consequence of an export of bullion that the reserve of the Bank of England, as well as of ordinary banks, is affected, *ib.* 4147-4149——Further definition of the reserve of the Bank of England, that is, of the Banking Department; the bullion in the Issue Department has no sort of connexion with it, *ib.* 4197, 4198.

Sense in which it may be said that the note reserve of the Banking Department is dependent upon the bullion in the Issue Department, *Chapman* 4923-4929.

Account of the notes in the Banking Department as published weekly in the "Gazette," since the passing of the Act 7 & 8 Vict. c. 32, from 31st August 1844 to 25th December 1847, *App. p.* 94-99——Similar account for each week, from 1st January 1848 to 27th December 1856, *ib.* 100-113.

Account of the gold and silver coin in the Banking Department as published weekly in the "Gazette," since the passing of the Act 7 & 8 Vict. c. 32, from 31st August 1844 to 25th December 1847, *App. p.* 94-99——Similar account for each week, from 1st January 1848 to 27th December 1856, *ib.* 100-113.

Account of bank notes held in reserve by the Banking Department, from the last day of each week, from 7th September 1844 to 27th December 1856, *App. p.* 114-147.

See also *Circulation*, 1. 1. *Drains of Bullion and Monetary Pressures. Issue Department. Rate of Interest. Reserve of Bullion* (*Issue Department*). *Sales of Securities.*

Rest Account. Amount of the Rest Account on the 28th of February and the 31st of August in each year, from 1778 to 1847 inclusive, *App. p.* 90-92——Similar statement for each year, from 1848 to 1856, *ib.* 93.

Account of the Rest of the Banking Department, as published weekly in the "Gazette" since the passing of the Act 7 & 8 Vict. c. 32, from 31st August 1844 to 25th December 1847, *App. p.* 94-99——Similar account for each week, from 1st January 1848 to 27th December 1856, *ib.* 100-113.

Amount of the Rest Account of the Bank on the 28th February 1857, *App. p.* 233.

Report, 1857—*continued.*

Restriction upon Issue:

I. *Bank of England:*

1. Explanation and Approval of the present Limit upon Bank Issues.
2. Objection to the present Limit as being very injurious in time of Pressure.
3. Disapproval of any Legislative Restriction upon Issue.

II. *Country Banks:*

1. Objections to a Removal of the present Restriction.
2. Statements in favour of an Alteration of the Limit.

I. *Bank of England:*

1. Explanation and Approval of the present Limit upon Bank Issues:

Reason why the issue upon securities was limited to fourteen millions, *Weguelin* 95——With regard to the issue of 14,000,000*l.* upon securities when money is abundant, witness does not object to the provisions of the Act thereon, *ib.* 323-325——Further evidence in explanation and approval of the limit of 14,000,000*l.* as the amount issued upon security, *ib.* 586-615——Intention in fixing the limit at 14,000,000*l.* that three or four millions of active circulation should be represented by bullion, *ib.* 596, 597. 614——The discretion of the Bank as to issue was limited by the Act, though the Act has probably made no difference in the actual management on this point, *ib.* 879.

But for the provision of the law compelling the Bank to issue upon bullion when the notes are in excess of a certain quantity, the note reserve in the Bank would be altogether an indefinite quantity, *Hubbard* 2332-2338——Absence of limit by the Act to the amount of circulation; the public by bringing gold to the Bank may have issues to any amount, *ib.* 2351, 2352——Object and advantage of selecting 14,000,000 *l.* as the limit of issue upon credit, *ib.* 2686-2689.

Main provision of the Act that only a certain amount of the circulation of the Bank should be issued on securities, and that all the notes beyond such amount should be issued upon gold, *Norman* 2862, 2863. 3438-3441——Grounds upon which the limit of 14,000,000*l.* as the issue upon securities was arrived at, *ib.* 2864——Profit involved in the issue of notes, and consequent competition if there were no legislative restriction, *ib.* 3143-3150——Necessity of some restriction upon issues generally, *ib.* 3487-3515.

Paper notes ought to be preserved at their proper value by making them under all circumstances conform in amount to the coins which they represent, *Right Hon. Lord Overstone* 3648——Evidence in detail showing the evils which may result from the want of a restriction upon paper issues, *ib.* 3688, 3689. 3906-3918. 4973-4988——Witness is not prepared to recommend any alteration of the amount which the Bank can now issue upon securities, *ib.* 3690——Reference to and strong approval of the views expressed by the Under Secretary of the Treasury of the United States in reference to the principle to be observed in the issue of paper money, *ib.* 4193. 4216-4219.

Argument by Mr. J. G. Hubbard that the amount of fourteen millions was in the first instance rightly fixed, *App. p.* 11.

2. Objection to the present Limit as being very injurious in time of Pressure:

Way in which the issue of 14,000,000*l.* in notes on securities weakens the position of the Bank and impairs its power of affording relief when most required, *Alexander* 4259. 4270. 4313.

The distress which began in 1815 continued till about 1817, when, the currency being increased, there was a season of prosperity for a time, *Twells* 4455. 4456——On the passing of the Act of 1819, restricting the circulation, distress at once set in; evidence in condemnation generally of this Act, *ib.* 4457. 4465 *et seq.*

Distinction between the Acts of 1819 and of 1844, that the latter restricts the issues of country banks, and is more binding upon the Bank of England in regard to its issues, *Twells* 4506-4509——Witness, whilst approving of the Bank Restriction Act of 1797, sees no objection to a limit being placed upon the amount of notes in circulation, *ib.* 4539-4541——Mischief attendant generally upon the restrictions of the Act of 1844, and the severity of their operation when gold is leaving the country, *ib.* 4593-4598.

Considerable and natural anxiety on the part of money dealers and the public lest the Bank should not have it in their power to supply any needful assistance which might be required, *Chapman* 4896-4920——Natural anxiety in 1847 lest the restrictions of the Act should bring the country into a state of paralysis, *ib.* 4900. 4908——Defect of the Act in not providing against withdrawals of the circulation from various causes, *ib.* 4904. 4907. 4962, 4963——Inexpediency of the power of individual capitalists to withdraw 1,000,000*l.* or 2,000,000*l.* in notes from the circulation, *ib.* 4963-4968.

The restriction upon Bank of England issues had the effect of creating many failures in 1847, *Chapman* 5219——If the circulation had not been obtainable in 1847, the monetary world might have been driven to a state of barter, or to the creation of a circulating medium for themselves, *ib.* 5223. 5306-5308——Opinion that about 19,000,000*l.*

Report, 1857—*continued.*

Restriction upon Issue—continued.

I. *Bank of England*—continued.

2. Objection to the present Limit as being very injurious, &c.—*continued.*

in notes is absolutely necessary to be in the hands of the public, *Chapman* 5225. 5287——The apprehension in 1847 lest bank notes should not be obtainable largely added to the actual drain, *ib.* 5237, 5238.

Reasonable ground for apprehension of panic when the restricted circulation is contrasted with the immense amounts liable to be called for in prompt payment, *Chapman* 5284-5286. 5294——Great difficulty in obtaining money in October 1856, although the circulation in the hands of the public was unusually high, *ib.* 5287-5289——Scarcity of money at the present time, though there is nearly 20,000,000 *l.* out in notes, *ib.* 5334, 5335——Through a want of the circulating medium during a crisis, a perfectly solvent person might now be reduced to a condition of bankruptcy, *ib.* 5360-5364.

The present system has only one principle, namely, that of contractibility, without any expansibility, *Capps* 5456——Concurrence in Mr. Chapman's evidence as to the disastrous effect of sudden withdrawals of bullion upon the industry of the country, *ib.* 5502-5504. 5508.

3. Disapproval of any Legislative Restriction upon Issue:

Argument in favour of the removal of all legislative limit upon the issues of the Bank of England, *Newmarch* 1343-1354. 1541-1547——Disapproval of a certain amount of bullion being specially set aside as a guarantee for the circulation, *ib.* 1344-1347——Witness does not consider it desirable that the issues of the Bank should be matter for legislation, *ib.* 1393——Circumstances which render a limitation upon the Bank issues less objectionable at the present time than in 1844, *ib.* 1510-1512——The only rule which should exist in regard to the issue of bank notes is the demand of the public, *ib.* 1912, 1913.

The Act, by restricting the issues, prevents what would be the natural action of the Bank in time of pressure, *Mill* 2312.

II. *Country Banks:*

1. Objections to a Removal of the present Restrictions:

Disapproval of country banks being allowed to increase their issues upon securities, *Weguelin* 174——Impediments to English country banks issuing upon bullion, if empowered to do so, *ib.* 174-177——Non-objection in principle to a similar power in the English country banks, as in the Irish and Scotch banks, to issue upon bullion in excess of their fixed circulation, *ib.* 576-585——Contravention of the principle of the Act of 1844 if country banks were allowed to issue to any amount in proportion as they deposited Government securities, *ib.* 954——Doubt as to any advantage if the English country banks were put upon the same footing as the Scotch and Irish banks, and enabled to issue upon gold in excess of their limited circulation, *ib.* 997-1007.

An allowance to English country banks to issue notes against bullion in excess of their limit of circulation would simply be to give them an extension of issue, without their keeping any additional bullion reserve, *Hubbard* 2481-2484——Witness does not recommend that English country banks should be allowed to over-issue against bullion, but he sees no reason for making a distinction between them and the Scotch and Irish banks, *ib.* 2790-2795.

Country banks of issue should remain on their present footing, new banks of issue being prohibited, *Norman* 2945-2952——Objection to any interference with the country banks which should in any way increase their amount of issues, *ib.* 3037-3041——Further disapproval of a power in country banks to issue to any extent, provided they gave security for two-thirds and issued one-third upon gold, *ib.* 3542-3544.

Advantage in the limit placed by the Act upon the amount of country issues, *Right Hon. Lord Overstone* 3977. 3980, 3981.

2. Statements in favour of an Alteration of the Limit:

Approval of a removal of the restrictions imposed in 1844 and 1845 upon the circulation of country banks, *Newmarch* 1411-1413——There is in principle no reason why the banks in Scotland and Ireland should not, equally with English banks, be released from the restrictions now imposed upon the circulation, *ib.* 1417. 1517, 1518.

Belief that there is no necessity for the present restriction upon country issues, *Mill* 2043.

Memorial of the Huddersfield Banking Company and the West Riding Union Bank, praying to be placed on the same footing as the Scotch and Irish banks, as regards the issue of notes, *App. p.* 348.

Memorial of the Sheffield Banking Company, praying to be put on the same footing as Scotch and Irish banks, with regard to the issue of notes, *App. p.* 348. 357, 358.

Resumption of Cash Payments. Except in 1817, when a partial payment of notes in gold took place, the actual resumption of cash payments did not fall upon the Bank till about 1821, *Norman* 3370–3372——Want of proper regulations subsequently to 1819, when cash payments were resumed and the note declared to be convertible, *Right Hon. Lord Overstone* 3648——Reference to the resumption of cash payments in 1819, and to the Act then passed by Sir Robert Peel as having restored the money of the country to its honest value, *ib.* 4181——Witness cannot understand upon what principle those who are favourable to the Act of 1819, repudiate the Act of 1844, *ib.*

Satisfactory state of things with few exceptions from 1800 till 1815, when the Bank was required to take steps for resuming cash payments, *Twells* 4439–4454——Partial resumption of cash payments in 1817, by paying three millions of 1 *l.* notes in gold, which notes being dated before 1817 were convertible; the notes subsequent to 1817 were not convertible, *ib.* 4458–4466.

Robertson, James. Letter from Mr. Robertson, manager of the Union Bank of Scotland, to Sir G. C. Lewis, dated the 14th February 1857, offering strong objections to the Acts 8 & 9 Vict. c. 38, and 7 & 8 Vict. c. 113, and suggesting certain amendments therein, *App. p.* 337, 338.

Royal Bank of Scotland. Approval by Mr. J. Wright, on the part of the Royal Bank of Scotland, of the principle of the Act 8 & 9 Vict. c. 35, *App. p.* 329, 330.

Particulars as to the amount of capital, &c., and of the authorised and actual circulation in April 1857, *App. p.* 333.

Royal British Bank. Extract from the London Gazette of the 18th February 1853, being a monthly statement of the liabilities and assets of the Royal British Bank, *App. p.* 334.

S.

Sale of Securities. With reference to the sale of public securities by the Bank, it does not practically alter the state of the reserve in time of pressure, *Weguelin* 296–299——Way in which the sale of securities by the Bank in times of pressure assists the commercial public, though it may not strengthen the Bank reserve, *ib.* 521–525——Great injury, without corresponding benefit, in selling public securities at very low prices in time of panic, *ib.* 525, 526——The forced sale of public securities would be entirely nugatory as regards a contraction of the circulation, *ib.* 748–756.

The effect of the sale of securities by the Bank in time of pressure would be the same as that of a refusal to make advances, *Mill* 2076. 2151, 2152.

Power of the Bank by a sale of securities slightly to contract the circulation; the effect of such proceeding chiefly falls on the deposits, *Hubbard* 2596–2606——In selling securities the object of the Bank is to strengthen its reserve, and the object is doubtless to some extent attained thereby, *ib.* 2765–2772.

Return of all purchases and sales of public stocks or Exchequer bills severally made by the Bank of England in each week from the 31st January 1848 to the 2d May 1857, and the rates of such purchases and sales, *App. p.* 242–277.

Report, 1857—*continued.*

Salmond, Robert. Letter from Mr. Salmond, manager of the City of Glasgow Bank, to Sir G. C. Lewis, dated the 19th February 1857, in disapproval of the Act 7 & 8 Vict. c. 38, and suggesting certain amendments therein, *App. p.* 343.

Scotland. Reference to the Act of 1845, as requiring the Scotch and Irish banks to deposit a certain amount of coin for any issue of notes beyond the amount authorised by law, *Weguelin* 42–45——General disapproval of the Scotch and Irish Acts on account of the limit upon circulation, *Mill* 2057–2059.

A permission to Scotch banks to over issue against Bank of England notes or securites would in all probability be perfectly safe, but it would be an addition to their right of credit issue, and an abrogation of the present law, *Hubbard* 2486–2490—— Respect in which the parallel sought to be established between the Scotch and Irish banks and the Bank of England in regard to their issue does not hold good, *ib.* 2486–2490—— If the Bank of England note were a legal tender in Scotland and Ireland, the simplest thing for the Scotch and Irish banks to do would be to issue their own notes as far as they can, and then to issue Bank of England notes, *ib.* 2494–2496. 2513, 2514 ——Disadvantages of the private bank circulation of Scotland and Ireland; less value of the notes when circulated in England, *ib.* 2498–2502.

Consideration of the over issue of Scotch banks as based upon bullion; a limitation upon the credit issue would probably be a better plan, *Hubbard* 2722–2727——Convenience amounting to necessity under which the Scotch and Irish banks over issue upon bullion, which they are not required to deposit, *ib.* 2786–2788.

Although witness does not like private issues at all, he is on the whole satisfied with the present system of issue in Scotland, *Norman* 3545, 3546.

As regards the Scotch banks, they invest largely in the funds, and have always borne a high reputation for credit, *Chapman* 5150–5154.

Return of the circulation of chartered, private, and joint-stock banks in Scotland, in each month from September 1833 to April 1857, *App. p.* 148–152.

Return showing the authorised issues of the notes of the banks in Scotland, the actual amounts issued, and the amount of bullion held by these banks in each week since the passing of the Acts of the 7 & 8 Vict. c. 32, and 8 & 9 Vict. c. 37 and 38, to the 9th May 1857, *App. p.* 182–203.

Account of the aggregate weekly circulation of the notes of banks of issue in Scotland, distinguishing those of 5*l.* and upwards, and those under 5*l.*, and showing the total amount, with the amount of bullion held, from the 13th December 1845 to the 9th May 1857, *App. p.* 204–213.

Account of the aggregate weekly circulation of chartered, private, and joint-stock banks in Scotland, from the 19th October 1844 to the 9th May 1857, *App. p.* 214–232.

Return of the number of banks of issue and of non-issue that have been established in Scotland in each year from 1819 to the present time, distinguishing joint-stock banks from private banks; of the number that have relinquished business in each year, again distinguishing banks of issue and non-issue, private banks, and joint-stock banks; and the number which have relinquished business in consequence of failure and other causes, *App. p.* 235——Return of the number of banks that existed in Scotland in the years 1819, 1830, 1844, and 1857 respectively, with the number of branches belonging to each, *ib.* 236——Account of the number of banks of issue in Scotland at the time of the passing of the Act of 1845, and whose issues were fixed by that Act; also the number which still continue in existence as banks of issue, and showing the number that have ceased, *ib.* 238.

Statement by Mr. Blair, manager of the Bank of Scotland, that the 10th section of the Act of 1844, relative to banks of issue, has produced an effect extremely unfavourable to the property of Scotland, *App. p.* 328.

Suggestion by Mr. J. Wright, on the part of the Royal Bank of Scotland, that there be an enlargement of the amount of circulation assigned to the Scotch banks, *App. p.* 329——Suggestion by Mr. J. Wright that the period for striking the averages in Scotland be extended to eight weeks, *ib.*

Disapproval by the Commercial Bank of Scotland of any relaxation of the Act of 1845, which would admit of excessive competition in Scotch banking, *App. p.* 330.

Recommendation by the Clydesdale Banking Company that each bank in Scotland should be bound to hold a certain amount of gold and convertible securities in such proportions to the gross amount of its circulation as Parliament may determine, *App. p.* 331——Recommendation by the Clydesdale Banking Company that the gold and silver coins held by the Scotch banks at their several agencies throughout the country should be taken into account in making the weekly returns of the stock of bullion, *ib.*

Statement submitted to the Chancellor of the Exchequer by the undermentioned unincorporated banks or banking companies in Scotland; viz. the Union Bank of Scotland, the

Report, 1857—*continued.*

Scotland—continued.

the Clydesdale Banking Company, the Edinburgh and Glasgow Bank, and the City of Glasgow Bank, *App. p.* 332, 333——These banks represent the very serious disadvantages which, from not being incorporated, it is by the Act of 1844, extended to Scotland in 1846, made to be under in comparison with other Scotch banks which had obtained charters of incorporation before the passing of these Acts; and from not being allowed to obtain incorporation except by subjecting itself to disabilities from which other banks are exempt, *ib.*——Remarks in the foregoing statement on the position and transactions respectively of the chartered and unchartered banks; Appendix giving full particulars thereon, *ib.*

Amendments suggested on the part of the Edinburgh and Glasgow Bank in regard to the proportion of gold against issues, *App. p.* 338, 339.

Statements in letters of Mr. J. Taylor, on the part of the Western Bank of Scotland, in favour of a permission to the Scotch banks to hold Government securities instead of gold, for at least a certain portion of the excess of their actual over their authorised circulation, *App. p.* 339-342.

Letter dated 12th December 1855, from the managers of the Glasgow banks to Sir G. C. Lewis, suggesting that the Scotch banks be allowed to hold Government securities in lieu of gold, for the excess of circulation, or for a certain portion of it, *App. p.* 342, 343.

Suggestion on the part of the Glasgow and West of Scotland Guardian Society for the Protection of Trade, with a view to increased issues by the Scotch banks, *App. p.* 359.

Petition of the commercial community at Glasgow complaining of the present restrictions upon banking in Scotland, *App. p.* 361, 362.

See also *Act* 7 & 8 *Vict. c.* 113. *Act* 8 & 9 *Vict. c.* 38. *Country Banks*, III. *One Pound Notes.* *Uniform Currency.*

Securities (*Bank of England*). The Bank have always held some railway securities, *Weguelin* 260——An available and sufficient amount is always held in Government securities, *ib.* 261——The Bank holds no foreign securities, *ib.* 527-529.

The Bank should not be required to keep any amount of securities specifically pledged against any particular part of their liability, *Newmarch* 1370——The securities of the Bank are not necessarily decreased by a high rate of interest, nor increased by a low rate, *Mill* 2149-2152——Suggestion that some arrangement be made, even though it involve an expense to Government, whereby the Bank should keep the whole of its capital subject to short transactions; illustration hereon of the evil of long investments of the Bank capital, *Alexander* 4277-4282.

Account of the amount of all securities, distinguishing public and private securities held by the Bank on the 28th February and the 31st August in each year, from 1778 to 1847 inclusive, *App. p.* 90-92——Similar account for each year from 1848 to 1856, *ib.* 93.

Account of the securities of the Bank as published weekly in the "Gazette" since the passing of the Act 7 & 8 Vict. c. 32, from the 31st August 1844 to the 25th December 1847, *App. p.* 94-99——Similar account for each week from the 1st January 1848 to the 27th December 1856, *ib.* 100-113.

Account of the total amount of Government securities and other securities held by the Bank from the last day of each week from the 7th September 1844 to the 27th December 1856, *App. p.* 136-147.

Account of the amount of all securities held by the Bank on the 28th of February 1857, *App. p.* 233.

Return of all purchases and sales of public stocks or Exchequer bills severally made by the Bank, in each week from the 21st January 1848 to the 2d May 1857, and the rates of such purchases and sales, *App. p.* 242-277.

Return of all loans to canal, dock, or other such public companies, or on the deposit of the securities of such companies, stating the rate of interest charged on each call or loan, from the 1st January 1832 to 1847, *App. p.* 286——Similar return from 1848 to 1857, *ib.*

Return of all railroad debentures purchased by the Bank, from the period of the first transaction of this description to the 10th August 1846, *App. p.* 287——Similar return for the years 1848 to 1856, *ib.* 287, 288.

Securities (*Country Banks*). Advantage if the country banks were required to deposit securities against their authorised issues, *Weguelin* 133. 170. 178, 179. 181-183. 203-213——Absence of precaution or security under the Act of 1844 in regard to the circulation of private and joint stock banks, or nearly one-half of the whole circulation of the United Kingdom, *ib.* 892-896. 914-918. 929. 946-954——There is no reason why private and joint-stock

Report, 1857—*continued.*

Securities (*Country Banks*)—continued.

joint-stock banks of issue should not give security as well as the Bank of England, *Weguelin* 946–953.

Further consideration of the proposition that country banks should be required to lodge with the Government public stock as a security for the circulation, *Weguelin* 967 *et seq.* ——Witness would like to see a portion of the country circulation represented by gold; or Bank of England notes would doubtless fulfil the same object, *ib.* 967–977.

Objections to requiring security from country issuers, *Newmarch* 1413–1416. 1528–1532——Although securities given by country bankers would consist of investments bearing interest, it would nevertheless be injurious to the banks of circulation to give such securities, *ib.* 1561–1580——Doubt as to there existing any necessity for requiring securities from country banks, *Mill* 2044. 2071, 2072——Way in which the proposition (not advocated by witness) that country banks should deposit public securities against their issues might be carried into practice, *ib.* 2273–2282.

Absence of proper security for the payment of country notes, *Hubbard* 2433. 2434——Security for country issues (if they be continued) would be desirable, but would most likely be objected to on the part of the bankers, *ib.* 2447——Doubt as to its being any inconvenience to country banks to keep a large amount of securities as against their circulation, *ib.* 2491–2493——Witness does not recommend that country banks should be required to give security for their issues, though in some instances of failure it would have been an advantage, *ib.* 2805–2807. 2812–2814——The giving of security by country banks would be a very complicated and unpalatable process, *ib.* 2812–2814.

Defect of the Act of 1844 in not prescribing that security shall be taken for the country issues, *Norman* 3322–3357——Witness has always held the doctrine that no bank should be allowed to issue without giving security, *ib.* 3325. 3330. 3356, 3357.

Statement with reference to the Act of 1844 not having required security in the case of the country issues; question as to this being a defect in the Act, *Right Hon. Lord Overstone* 3680. 3687. 3976–3980. 3983–3986.

Country bank notes not being a legal tender, witness does not recommend that such notes should, as well as Bank of England notes, be issued only on gold, *Alexander* 4309–4313. 4318, 4319——Doubt as to the expediency of requiring country banks to give security for their issues, *Twells* 4619–4623.

Recommendation by Mr. Neave that all banks of issue should deposit security, as the Bank of England does, with permission to compound for their issues, *App. p.* 5.

Suggestion by Mr. Norman that security be required from all issuing banks, *App. p.* 15.

Suggestion by Mr. Latham, with a view to country issuers lodging securities to the amount of their issues; failing to do so, they should adopt the alternative of compounding with the Bank of England, *App. p.* 17.

Suggestion by Mr. B. B. Greene that banks of issue should deposit Government securities for the authorised amount of their issues, *App. p.* 19.

Remarks by Mr. Thomson Hankey in disapproval of the issues by country banks without the necessity of any security for the payment of the notes, *App. p.* 23.

Separation of Issue and Banking Departments:

1. *Perfect Character of the Separation.*
2. *Objection to the Separation; Evils resulting therefrom.*
3. *Evidence strongly in approval of the Separation.*

1. *Perfect Character of the Separation:*

There is a legal and virtual distinction between the Issue and Banking Departments, though it may be called merely a distinction of accounts, *Weguelin* 164, 165. 775–777——The Bank of England are merely administrators of the Issue Department, *Neave* 1144, 1145——Practical and legal distinction between the Issue and Banking Departments; obligations of the Bank to abide thereby, *Mill* 2033, 2034——Perfect character of the separation, though the two departments are managed by the same body, *Hubbard* 2326——Purely mechanical character of the operations of the Issue Department, *ib.* 2340. 2387——The Issue Department is not subject to any control by the Banking Department, its function being merely to exchange notes for gold, *Norman*, 3442, 3443.

Definition of the several objects of the separation; they have been completely effected, *Right Hon. Lord Overstone* 3646——The term "Bank" should not be associated with the Issue Department at all; the Bank, in fact, have not any power whatever over the issues, and are merely the mechanical agents of Government in the matter, *ib.* 3664–3671. 3953–3959——The Bank merely contracts to do the business of the Issue Department on behalf of the state, being allowed certain profits, and incurring certain risks, *ib.* 3954–3959——The Issue Department is now as distinct from the Bank of England as is necessary

Report, 1857—*continued.*

Separation of Issue and Banking Departments—continued.

1. *Perfect Character of the Separation*—continued.

necessary for all purposes which have reference to the principles affecting the regulations of the exchanges, *Right Hon. Lord Overstone* 3969.

Phraseology of portions of the Act adverted to with reference to witness's view that the Bank of England has not, save mechanically, any connexion with the Issue Department; the Act clearly provides that the department shall be conducted altogether irrespectively of the banking business, *Right Hon. Lord Overstone* 4015-4018——In the Issue Department the Bank have no discretionary action, *ib.* 4015, 4016. 4155, 4156——Witness cannot understand that the term "Bank of England" includes the Issue Department, *ib.* 4018.

Further evidence in support of the statement that the Issue Department belongs to the state, and has not, save mechanically, any connexion with the Bank of England, *Right Hon. Lord Overstone* 4155-4162——The accidental form in which the Bank are paid for the conduct of the issues does not affect the question of the distinct separation of the Issue and Banking Departments, *ib.* 4157-4162——The bullion is not in the Bank of England at all, but in the Issue Department, *ib.* 4168, 4169.

2. *Objection to the Separation; Evils resulting therefrom:*

As regards the separation of the Issue and Banking Departments, there was scientifically no sufficient reason for it, *Newmarch* 1355, 1356——The cutting in two the reserve of bullion, as a consequence of the separation of the departments, forms one of witness's main objections to the Act, *ib.* 1356 *et seq.*——In practice the separation has operated mischievously, as producing undue fluctuations in the rate of interest, *ib.* 1356-1360. 1363-1367. 1431-1440. 1463-1471.

Witness further argues that the Act of 1844, by the separation of the Issue and Banking Departments, and the cutting in two of the bullion reserve, has debarred the public from the advantage of the whole of the resources of the Bank, *Newmarch* 1541-1547. 1855-1857. 1869-1878——An amalgamation of the Banking and Issue Departments, as before 1844, would be a consummation of witness's views, *ib.* 1877.

Consideration of the effects of the separation; peculiarly prejudicial course of action necessarily involved therein, *Mill* 2026 *et seq.*——Necessity for the Bank, through the separation of the departments, to keep as large a reserve in each as previously sufficed for both, *ib.* 2026. 2033, 2034. 2073. 2288-2291——If in time of extreme pressure the Issue Department could assist the Banking Department, there need not be the same contraction of accommodation, which is now so injurious, *ib.* 2102-2105. 2120, 2121——The inexpediency of the separation of the departments was illustrated in 1847, when the Bank was in danger of stopping payment, although there was between 6,000,000 *l.* and 7,000,000 *l.* of bullion in its coffers, *ib.* 2187-2193.

Evil effect generally of the restriction upon the Bank as regards the use of all the bullion in the Issue Department, *Alexander* 4348-4355——In speaking of the amount of reserve of the Bank before 1844 and subsequently thereto, it should be borne in mind that, according to Act, the reserve is not now entirely available, *ib.* 4351-4356.

3. *Evidence strongly in approval of the Separation:*

The convertibility of the note being provided for by the Act, and the circulation taking care of itself, witness fully approves of the attention of the Bank direction being confined to the Banking Department, and of the present separation from the Issue Department, *Weguelin* 1287 *et seq.*

The separation between the Issue and Banking Departments has been, both in scientific and in a practical view, most important and most beneficial, *Hubbard* 2324 *et seq.*——No inconvenience whatever can arise from the bullion being as it were cut in two by the separation of the departments, *ib.* 2327——The existence separately of the Issue Department is ancillary to the principle of the limitation of the credit issues, *ib.* 2337, 2338——Simple and most useful office performed by the Issue Department in placing the currency upon a solid basis, *ib.* 2340.

The separation of departments has caused the Bank to look more accurately and closely to its position as bankers, but has had no influence whatever upon the natural laws which regulate the value of money or the rate of interest, *Hubbard* 2365, 2366. 2628——The Act has not in the slightest degree diminished either the power or the disposition of the Bank to accommodate the public; practice previously to and since 1844, adverted to hereon, *ib.* 2380-2382——Argument showing the fallacy of Mr. Mill's theory, that, in consequence of the separation of the departments, a drain of 3,000,000 *l.* has a double effect, and is tantamount to a drain of 6,000,000 *l.*, *ib.* 2761, 2762.

Approval of the separation of the Issue and the Banking Departments by the Act of 1844, on the ground that it is mischievous to place the issue of paper money in the hands of persons who carry on the ordinary banking business, *Norman* 2888-2893——Denial that the separation of the Banking and Issue Departments has had any effect in regard to the fluctuations in the rate of discount, *ib.* 2964. 2968-2977. 3005-3007——

Report, 1857—*continued.*

Separation of Issue and Banking Departments—continued.

3. *Evidence strongly in approval of the Separation*—continued.

Absence of any diminution in the power of the Bank to accommodate the public since the Act of 1844, *Norman* 2979-2981.

Further statement as to the separation of the departments, having reference to the difference between the business of issue and of ordinary banking, *Norman* 3106-3112——The separation of the departments is an essential part of the system, as necessarily leading to the fact that the issues of bank notes vary in all cases exactly as bullion would vary, *ib.* 3451-3453.

The separation of the Banking and Issue Departments is the main auxiliary provision for carrying out the principle of the Act, *Right Hon. Lord Overstone*, 3646——Proposition that the supply of the current coin should be entirely separated from banking business, *ib.* 3648——The assertion that the separation of the departments has caused more frequent and violent fluctuations in the rate of interest is not in any way supported by fact, *ib.* 3653. 3661, 3662.

Essential advantages of the separation of the departments further adverted to, *Right Hon. Lord Overstone* 3961-3968——Outline of the functions and working of the Issue Department, *ib.* 4143-4145——The separation of the Issue and Banking Departments is highly desirable, *Chapman* 4955, 4956.

See also *Banking Department.* *Reserve of Bullion* (*Issue Department*), 7.

Sharples, Tuke, Lucas & Co. (*Hitchin*). Memorial of these bankers, suggesting that the time permitted for taking the averages of the circulation be extended from one month to six months, and the year divided into two periods of six months each; and requesting to be put upon the same footing as the Scotch and Irish banks in regard to issue, *App. p.* 351.

Sheffield Banks. Petition of the Sheffield and Hallamshire Banking Company, of the Sheffield Banking Company, and of the Sheffield and Rotherham Banking Company, praying for an extension of the period for taking the averages of the circulation, and to be put on the same footing as Scotch and Irish Banks, with regard to the issue of notes, *App. p.* 348. 357, 358.

Silver. Estimate that the total import of silver into Europe in the years 1851-57 has been 25,820,000*l.*, *Weguelin* 15. 17——Estimate export of 36,530,000*l.* from Europe to the East in the years 1851-57, *ib.* 17——Demand for silver in the East in consequence of the failure of the silk crop, *ib.* 21——Great increase in the coinage of silver adverted to, *ib.* 54.

Evidence relative to the continued efflux of silver to India and China, to the extent of about 6,000,000*l.* annually; different causes, *Mill* 2082-2101. 2260-2268——The remission of silver to the East is probably partly owing to the change in the relative value of gold and silver since the gold discoveries, *ib.* 2083. 2097. 2262-2265——Increased importation of Eastern products is one reason of the continued remittance of silver to the East, *ib.* 2084. 2086-2094——Practice of hoarding in India adverted to in connection with the constant efflux of silver thither, *ib.* 2084, 2085. 2101——The efflux of silver is partly owing to the requirements of the Indian railways, *ib.* 2095-2099——A great part of the silver for the East has gone from France, *ib.* 2267, 2268——The probable effect of a continuance of the efflux of silver to the East will be to make gold the standard in countries whose standard is now silver, *ib.* 2269, 2270.

Information relative to the long-continued drain of silver to the East; causes of the drain, *Alexander* 4334-4344——The Chinese civil war has been partly the cause of the drain, *ib.* 4334. 4336. 4340-4342——The great loss of the silk worm on the Continent has also partly caused the drain, *ib.* 4334-4344.

Statement by Mr. J. G. Hubbard in disapproval of power in the Bank to issue more than one-fourth of its notes on silver, *App. p.* 13.

Monthly statement of bullion bought and sold by the Bank of England, distinguishing gold from silver bullion, from the 1st January 1832 to the 31st December 1847, *App. p.* 82-85——Similar statement for each month from 1 January 1848 to 31 December 1856, *ib.* 86, 87.

Table of the monthly gain or loss of silver coin arising out of the action of the public on the stock in the Bank of England, *App. p.* 292.

Account of the silver coin held by the Bank of England, together with the receipts from the Mint, and the excess of payments to or of receipts from the public; also the total amount coined in each month of each of the years 1845-56, *App. p.* 292-298——Summary of the total amount of silver received from the Mint by the Bank in each of the years 1845-56, *ib.* 298——Summary of the total amount of worn silver sent to the Mint in each of the years 1845-46, *ib.*——Summary of excess of payments to the public in each of the years 1845-56, *ib.*——Summary of excess of receipts from the public in each of the years 1845-56, *ib.*——Summary of the total coinage of silver in each of the years 1845-56, *ib.*

Smith,

Report, 1857—*continued.*

Smith, Thomas Charles. Letter from Mr. Smith to the Governor of the Bank of England, dated the 7th October 1856, in approval of the Acts of 1844 and 1845, *App. p.* 9.

South Hants Bank. Petition from this bank praying that compensation be continued for their relinquishment of issue, *App. p.* 352.

Speculation. A low rate of interest is not the cause of speculation, but is an index of the large amount of unemployed capital which leads to speculation, *Weguelin* 252. 271—— If when the reserve was unusually large, as in 1845-46, the Bank had kept the rate of interest at four per cent., it would not have had much or any effect in checking speculation, *ib.* 269-271——Tendency of speculation or an expansion of trade to increase the circulation, but not to any material extent, *ib.* 959 *et seq.*——Encouragement of speculation by advances of capital, but not by increase of circulation, *ib.* 995. 1011 *et seq.*——Objection to speculation being supported upon an increased credit circulation, rather than an accumulation of capital, *ib.* 1311. 1314, 1315.

Increased employment of capital, and at lower terms, in the event of reckless advances by competing banks, *Newmarch* 1616-1622. 1635-1639——Equal tendency of banks of non-issue as of banks of issue to promote speculation, as shown by the operation of the London banks during the speculation of 1825, *ib.* 1639-1646——Effect of over issues as creating undue speculation, *Mill* 2313.

Opinion that the object of the Act of 1844 was partly to secure the value of the currency, and partly to check over speculation and over credit, *Alexander* 4255, 4256 ——Incentive to speculation, and bar to legitimate commerce and enterprise consequent upon the oscillations of late years in the value of money, and the rate of interest, *Twells* 4603-4617.

Stamford, Spalding, and Boston Banking Company. Petition signed on the part of this bank, praying for certain alterations in the Act of 1844, *App. p.* 360, 361.

Stamp Duty. Payment by the Bank of 60,000 *l.* a year as commutation of stamp duty, *Weguelin* 139.

Return of the amount received for composition for stamps in Great Britain and Ireland, in each year from 1833 to 1856, *App. p.* 309.

Return of the stamp duty on bills of exchange of each denomination in England, Scotland, Ireland, and the United Kingdom, distinguishing the principal commercial and manufacturing districts in the former country, from 1844 to 1856, *App. p.* 310-323.

Standard of Value. Variation in the exchangeable value of gold, as a commodity, according to the supply and demand, *Newmarch* 1978-1992——The objection to gold as a measure of value is, that it is constantly varying, *Twells* 4685. 4707, 4708.

Unsoundness of the principles of the Acts of 1819 and 1844, that the pound sterling ought to be at all times a fixed and unvarying weight of gold, *Capps* 5420, 5421. 5441-5445. 5461-5465. 5473-5477——Gold is not the natural standard of value, but a convenient measure of value only, *ib.* 5445——Argument that corn or labour, rather than gold, is the real standard of value, *ib.* 5461-5465. 5473, 5474——Importance of gold or the measure of value continuing of the same purchasing power, *ib.* 5473-5481.

Suspension of Specie Payments. A suspension of payment, which is a greater evil than inconvertibility, is much more possible under the Act than it was before, *Mill* 2287—— Whatever may be the extent of misconduct or mismanagement by bankers or by the mercantile community, the maintenance of specie payments can never be endangered under the Act of 1844, *Right Hon. Lord Overstone* 3994——A temporary suspension of specie payments would be a less evil than the distress consequent on a want of the circulating medium, *Chapman* 5338-5340.

See also *Convertibility. Drains of Bullion and Monetary Pressures*, I. II.

Swansea Branch (*Bank of England*). Accounts of the average circulation of twenty-one days' and seven days' bills, in each year from 1832 to 1847, *App. p.* 24——Account of the average circulation of seven days' and other bills, in each year from 1848 to 1856, *ib.* 25.

Account of the average circulation of branch bank notes in each year, from 1832 to 1847, both inclusive, *App. p.* 26——Similar account for each year, from 1848 to 1856, *ib.* 27.

Weekly statement of the circulation of twenty-one and seven days' bills, during the year 1847, *App. p.* 28, 29——Similar statement for the year 1856, *ib.* 30, 31.

Weekly statement of the circulation of branch bank notes during the year 1847, *App. p.* 32, 33——Similar statement for the year 1856, *ib.* 34, 35.

T.

Taylor, John. Letter from Mr. Taylor, manager of the Western Bank of Scotland, to Sir G. C. Lewis, dated the 14th February 1857, in strong disapproval of the Act 7 & 8 Vict. c. 38, and suggesting certain amendments therein, *App. p.* 339, 340.

Report, 1857—*continued.*

Taylor, John—continued.

Letters, dated respectively the 27th April 1854 and the 8th May 1854, from Mr. Taylor to Mr. Gladstone (then Chancellor of the Exchequer), suggesting important alterations in the Act of 1845; more especially that the Scotch banks might be allowed to issue on Government securities beyond the authorised amount, *App. p.* 340–342.

Term of Bills. Witness looks more to a restraint upon the term of bills than upon the direct rate of interest as a means of guarding the bullion, *Weguelin* 311–316.

As regards the protection of the bullion, the Bank look upon a high rate of interest, and a limitation of the term of the bills, as simultaneous and concurrent measures, but they mainly adopt the former restriction, *Neave* 327.

In protecting the reserve the Bank both raise the rate of interest and restrict the terms of loans, the latter being preferred by witness, *Weguelin* 504–510——Advances made by the Bank for six weeks on six months' bills, *ib.* 534–536——As a means of correcting adverse exchanges witness further advocates a restriction of the terms of loans rather than an advance in the rate of interest, *ib.* 556–565. 1201, 1202. 1234–1236. 1261–1266——Though a restriction upon the term of bills may operate harshly upon particular classes, the hardship is one that necessarily follows the course of events, and is salutary in its results, *ib.* 1261–1266——On various occasions of pressure the Court of Directors have adopted the practice of restricting the term of bills, *ib.* 1265——In 1840 the reduction to sixty days of the term of bills discounted by the Bank had the effect of righting the foreign exchanges, though other measures had failed, *ib.* 1265, 1266.

A limit upon the terms of bills discounted by the Bank has at times a more severe effect than a rise in the rate of interest, *Newmarch* 1481——Bills would probably be drawn at the usance required by the Bank, if capital could not otherwise be raised, *ib.* 1482–1485.

Disapproval of a restriction upon the date of bills discounted by the Bank as being an unequal and arbitrary mode of correcting the exchanges, *Hubbard* 2569. 2574–2577——In isolated cases only has the Bank refused to discount bills having more than sixty days to run, *ib.* 2846, 2847.

Thornbury Bank (*Gloucestershire*). Petition of this bank (issuers of their own notes), praying for certain alterations in the Act of 1844, *App. p.* 356.

Tooke, Mr. Witness has been associated with Mr. Tooke in the preparation of the latest volumes of his work on prices, and concurs generally with the views expressed by Mr. Tooke, *Newmarch* 1339–1341. 1368–1411.

Quotation of the authority of Mr. Tooke, as being in favour of effectually separating the function of issuing paper or coining from that of banking, *Right Hon. Lord Overstone* 3648——Reference to the views of Mr. Tooke as being to the effect that the Bank of England has not caused any undue fluctuations in the rate of interest, and that fluctuations are in fact expedient as well as unavoidable, *ib.* 3653. 3661, 3662——Further statement relative to the views of Mr. Tooke in regard to variations in the rate of interest; dissent from the doctrine more lately held by Mr. Tooke on this point, *ib.* 3845–3847.

Quotation of the views of Mr. Tooke with reference to the pressures in 1783 and 1795, *Right Hon. Lord Overstone* 4176——Also with reference to the crisis in 1797, *ib.* 4178——Sound views expressed by Mr. Tooke in declaring his approval of the Act of 1819, *ib.* 4181.

See also *Reserve of Bullion* (*Issue Department*), 5. 6.

Trade and Commerce. Beyond the regulation of the money market the Bank does not seek to interfere with the course of trade, *Weguelin* 546——Probable effect upon trade if the Bank were to force an additional issue of 5,000,000*l.* by lowering the rate of discount, *ib.* 1316–1329.

Witness is quite satisfied that the Act has not operated prejudicially to the mercantile community, *Hubbard* 2774–2777——The Bank have discounted 25,000,000*l.* in one year without any bad debts, *ib.*

Commercial progress and national prosperity at the present time under the operation of the Act, *Right Hon. Lord Overstone* 3648. 4189. 4222–4226. 4234–4236——Argument that oscillations in the rate of interest are in no way injurious to the commerce of the country, *ib.* 3722 *et seq.* 3815–3817. 3847——Absence of any intimate connexion between an increased reserve of bullion and a decline in the prosperity of trade as well as in the rate of interest, *ib.* 3722–3735.

With reference to an answer given by witness before the Committee in 1848 on Commercial Distress, to the effect that the commerce of the country would continue to prosper notwithstanding fluctuations in the rate of interest, he fully abides by that answer at the present time, *Right Hon. Lord Overstone* 3843, 3844——Further reference to the slight extent to which profits in trade are affected by high rates of interest, *ib.* 3859–

Report, 1857—*continued.*

Trade and Commerce—continued.

3859-3863——Advantage to persons trading with their own capital, or only partly with their own capital, when the rate of interest is high, *Right Hon. Lord Overstone*, 3864-3873.

Further evidence as to the connexion between a high rate of profit in trade and a high rate of interest, *Right Hon. Lord Overstone*, 4127-4130——Absence of parallel between the prosperity of the United States under a system of banking and issue to which witness so strongly objects, and the prosperity of this country under a system of which he so highly approves. *ib.* 4223-4233.

Respect in which the restrictions of the Act may be said to check legitimate trade and enterprise, *Alexander* 4357-4359.

Whenever there has been a plentiful paper issue there has been prosperity in trade, *Twells* 4466. 4470——Great distress in 1825, and in several subsequent years, up to 1844, in consequence, as witness considers, of the contraction and irregularity of the currency, *ib.* 4470-4486——Argument that the Act has operated very injuriously to the trade and prosperity of the country generally, *ib.* 4488-4491. 4612-4617. 4748-4750——Unprofitable nature of trade at the present time; case in illustration, *ib.* 4493-4499——Instance of the large rates of discount necessarily paid at times by small tradesmen, *ib.* 4493.

Much less steadiness in trade than when the rate of discount continued uniform, *Twells* 4605. 4617——The present system and its fluctuations may well be acceptable to money dealers but not to commercial men, *ib.* 4612-4616. 4649-4654——Witness's system of inconvertible notes would be better for trade, but worse for the banker and the money dealer, *ib.* 4721——Further reference to the distress at different periods subsequently to 1819 as having arisen from, at one time, a too violent contraction of the currency, and at other times, from too large an issue of convertible paper, *ib.* 4769-4780.

Belief that the effect of the Act has been to lower the profits of general business, and to encourage speculation, *Capps* 5520-5527.

See also *Building Trade. Drains of Bullion and Monetary Pressures. Over-issue. Prices. Rate of Interest.*

Twells, John. (Analysis of his Evidence.)—Member, since 1815 or 1816, of the firm of Spooner, Attwoods & Company; has been a banker since 1801; 4366-4374——Extensive connexion of witness's firm with country bankers, and with Irish business, 4375-4377——Reference to very severe commercial pressures in 1783, 1793, and 1795, in consequence chiefly of the withdrawal of gold from the country; convertibility at this period of the bank note, 4378-4393——Issue of 5 *l.* notes by the Bank for the first time in 1793; this was some relief, 4392.

Continued pressure from 1795 till 1797, in which year the Bank Restriction Act was passed; great relief and improvement consequent upon this Act, 4394-4441——Circumstance of corn having been imported in exchange for commodities at this period, and without the instrumentality of an export of bullion, 4407-4419——The rate of discount remained at five per cent. from about 1800 to 1822, and was adopted generally by bankers and bill-brokers; this was the result of the steadiness of the currency, 4420-4438.

Very slight increase of the circulation of the Bank for some years after 1797; 4439——Satisfactory state of things, with a few exceptions, from 1800 till 1815, when the Bank were required to take steps for resuming cash payments, 4439-4454——The distress which began in 1815, continued till about 1817, when, the currency being increased, there was a season of prosperity for a time, 4455, 4456——On the passing of the Act of 1819, restricting the circulation, distress at once set in; evidence in condemnation generally of this Act, 4457. 4465 *et seq.*

Partial resumption of cash payments in 1817, by paying 3,000,000 of 1 *l.* notes in gold, which notes, as having been dated before 1817, were convertible; the notes subsequent to 1817 were not convertible, 4458-4466——Whenever there has been a plentiful issue there has been prosperity, 4466. 4470——Great distress in 1825, and in several subsequent years, up to 1844, in consequence, as witness considers, of the contraction and irregularity of the currency, 4470-4486.

As regards the Act of 1844, which was intended as a complement to that of 1819, it has doubtless operated extremely beneficially for the bankers and large capitalists, by enabling them to obtain unduly large rates of interest, 4487-4489. 4500, 4501. 4649-4654. 4745-4747. 4781-4795——Argument that the Act of 1844 has, on the other hand, been exceedingly prejudicial to small capitalists and tradesmen; and that the fluctuations and pressures under the Act have been very injurious to the trade and prosperity of the country generally, 4488. 4490-4511. 4612-4617. 4748-4750.

Unprofitable nature of trade at the present time; case in illustration, 4493-4499——As regards the panic of 1847, it was caused by the drain of bullion, the currency being based upon bullion, 4501-4504——Satisfactory operation of the Act of 1844, so far as the Bank of England are concerned, 4505——Distinction between the Acts of 1819 and of 1844, that the latter restricts the issues of country banks, and is more binding upon the Bank of England in regard to its issues, 4506-4509——Failure of the Act of 1844 in

Report, 1857—*continued.*

Twells, John. (Analysis of his Evidence)—*continued.*

in its object of preventing the recurrence of such fluctuations as those of 1824, 1829, and 1830; 4507-4511.

Looking to the experience of the earlier part of the century, witness considers that regularity in the rate of discount is not impossible, 4512——There is a constant alteration in the value of all deposits, such deposits being in effect money, and influencing the value of capital; connexion therefore between fluctuations in the rate of interest and in the value of deposits, 4513-4535——Origin of monetary pressures and drains of bullion in the want of a circulating medium of undoubted credit, 4536-4538.

Witness, whilst approving of the Bank Restriction Act of 1797, sees no objection to a limit being placed upon the amount of notes in circulation, 4539-4541——As an improvement upon the issue of 14,000,000 *l.* in notes payable on demand, witness recommends the issue of 14,000,000 *l.*, or rather of 20,000,000 *l.* in notes, promising to be receivable by Government in aid of taxes, such notes to be in fact legal tender notes, but not convertible into gold, 4541 *et seq.*

Anticipated steadiness in our commercial transactions and in the rate of interest under the proposed system of inconvertible and legal tender notes, 4541 *et seq.*——Besides the 20,000,000 *l.* of inconvertible notes, there might be an issue of 4,000,000 *l.* or 5,000,000 *l.* in convertible notes, 4543, 4544. 4547——So long as the amount of the legal tender varies with the amount of gold there must be fluctuation in the rate of discount, 4548. 4557——The proposed legal tender notes, convertible into taxes, could not oscillate in amount, 4553-4555.

Means of managing our foreign payments under the proposed system of legal tender notes, 4558-4565. 4584. 4629, 4630——It is almost impossible that there should be an excess of issue of the proposed notes by the Bank of England, 4567——The practice of over-issue, as adopted by the French Government, must be avoided, 4566, 4567——Great improbability of fluctuation in the value of the proposed notes; less fluctuation than in the value of gold, 4568-4578. 4611. 4625.

Want of money rather than of capital by the commercial classes in the pressures of 1825 and 1847; 4579-4583——It is immaterial whether the proposed notes be issued by the Government or the Bank of England; but the latter body could best undertake the issue on account of the completeness of its machinery, 4585, 4586. 4632——Tendency of a scarcity of money to force sales and lower prices, 4587-4590. 4595-4597——Great relief given by the imports of gold from Australia and California, 4591——The welfare of the commercial world seems to depend, at times, upon the arrival or non-arrival of a gold ship; this is an unsound state of things, 4591-4593.

Mischief attendant generally upon the restrictions of the Act of 1844, and the severity of their operation when gold is leaving the country, 4593-4598——Suggestion that it should not be imperative upon the Bank of England to purchase all the gold brought into the country; ill effect of their doing so when gold is abundant, 4598-4602. 4809——Incentive to speculation and bar to legitimate commerce and enterprise consequent upon the oscillations of late years in the value of money and the rate of interest, 4603-4617.

Much less steadiness in trade than when the rate of discount continued uniform, 4605. 4617——Violent fluctuations tend towards making the rich man richer and the poor man poorer, 4608——The present system and its fluctuations may well be acceptable to money dealers, but not to commercial men, 4612-4616. 4649-4654——The natural tendency of an accumulation of capital, as in this country, should be to lower the rate of interest, whereas the present restrictions periodically force up the rate, 4614, 4615.

Witness contemplates that country bank notes should be convertible into the proposed legal tender notes, 4618. 4628——Opinion that the country bank circulation is now in a very satisfactory state, 4619——Doubt as to the expediency of requiring country banks of issue to give security for their issues, 4619-4623——Witness anticipates that 20,000,000 *l.* in legal tender notes would, under the proper system, be adequate to meet the expanding wants of trade, 4624-4630.

Further statement that the proposed 20,000,000 *l.* of inconvertible and legal tender paper would cause greater uniformity and steadiness in the value of the legal tender than is now the case, 4634 *et seq.*——Improbability of any depreciation in the inconvertible notes as in the case of the French assignats, 4634-4641. 4764-4768——The advantage of the inconvertible notes consists in the fact that gold cannot be required for them, more especially for foreign purposes, 4634. 4642.

Examination as to the purchasing power respectively of a 5 *l.* inconvertible note, and of five sovereigns, 4635, 4636. 4644-4647. 4655 *et seq.*——Witness looks upon the word "pound" as a term of account, and sees no intimate connexion between the value of a pound and of a sovereign, 4644-4647. 4655 *et seq.*——Reason for fixing the amount of inconvertible notes at twenty millions; fourteen millions might be sufficient, or the Bank might be safely trusted with a discretionary power as to the limit of issue, 4663. 4664. 4709-4711. 4743, 4744. 4807——Since 1819, witness has not known any discrepancy between the value of the 5 *l.* note and of five sovereigns, 4678-4684. 4717.

The

Twells, John. (Analysis of his Evidence)—*continued.*

The objection to gold as a measure of value is that it is constantly varying, 4685. 4707, 4708——Means of computing the proper number of sovereigns to be produced by a certain quantity of gold sent to the Mint to be coined; reference hereon to the produce in sovereigns of 10,000 *l.* worth of gold once sent to the Mint by witness's firm, 4686-4706——By a proper limit upon the issue of paper, and by making it inconvertible, a more uniform and a sounder currency may be arrived at than by means of anything which is dependent upon barter, 4712-4720.

Witness's system would be better for trade but worse for the banker and money-dealer, 4721——Besides the proposed inconvertible notes there should be an issue of notes upon bullion, not fixed in amount but according to the varying rate of bullion in the market, 4722-4724. 4735, 4736——Reference to the Government letter of October 1847 as having at once relieved a pressure which otherwise might have been most disastrous, 4725, 4726——The pressure in 1847 was the result of the restrictions of the Act of 1844, and of the general and natural apprehension of a scarcity of notes which led to their being hoarded, 4726-4732.

Belief that a large importation of corn would not under a system of inconvertible notes produce the evils now consequent upon the drains of bullion necessary to pay for such corn, 4733, 4734, 4751-4756——Fallacy involved in the bank notes now bearing upon them a promise to pay on demand, 4737-4741—— More fair and judicious course if the notes bore an impress that they were issued upon securities and were made a legal tender, 4741, 4742.

Belief that the convertible currency and the gold would not rise to a premium as compared with the inconvertible currency, but if such were to happen there would be no inconvenience in it, 4757-4763——Wide difference between the proposed inconvertible notes and the French assignats, 4764, 4765——Improved system of Exchequer bills when payable at three months instead of twelve months, 4765-4768——Further reference to the distress at different periods subsequently to 1819 as having arisen from, at one time, a too violent contraction of the currency, and, at other times, from too large an issue of convertible paper, 4769-4780.

Although the rate of interest has at times been very low since 1844, bankers have greater means of making profits than they previously had, 4781-4795——An issue of convertible notes as well as an issue of fourteen or twenty millions of inconvertible notes could not result in a similar fluctuation in the aggregate circulation as is now the case, 4796-4809.

Doubt as to the means by which some of the joint stock banks make such large profits, 4810-4818—— How far the practice of the Bank of England to show any favour as regards discounts to persons keeping accounts with them, 4819-4823——Impression that the Bank do not now require persons keeping accounts with them to have more than a nominal balance in their hands, 4824-4830——On the whole, the machinery of the Bank is excellent, and the directors spare no expense in accommodating the public, 4831.

U.

Uniform Currency. It is very desirable that there should be one uniform currency for England and Wales, even if it did not extend to Scotland and Ireland, *Hubbard* 2438-2442. 2445. 2447——Advantage in having exclusively Bank of England notes which would pass everywhere, the circulation of country notes being now limited to particular districts, *ib.* 2442, 2443. 2446——An uniform circulation is more especially desirable for England and Wales, but should also be extended to Scotland and Ireland, *ib.* 2497, 2498. 2840, 2841——Bank of England notes issued in London would readily find their way into remote districts where issues may have lapsed or notes are in demand, *ib.* 2701-2706. 2709. 2714-2716. 2816-2818.

Doubt as to the expediency of doing away with all issues save the issues by the Bank of England, *Norman* 2938. 2943.

See also *Central Bank of Issue. Country Banks*, I. II. *Forgery. One Pound Notes.*

Union Bank of Scotland. This bank represents the very serious disadvantages which, from not being incorporated, it is by the Act of 1844, extended to Scotland by Act in 1846, made to lie under in comparison with other Scotch banks which had obtained charters of incorporation before the passing of these Acts, and from not being allowed to obtain incorporation except by subjecting itself to disabilities from which other banks are exempt, *App. p.* 332, 333.

Particulars as to the amount of capital, &c. and of the authorised and actual circulation in April 1857, *App. p.* 333.

Objections, on the part of the Union Bank, to the unequal operation of the Act of 1845 in regard to the unchartered banks, *App. p.* 337.

Report, 1857—*continued.*

United States. Remarks relative to the immense increase of paper issue in the United States before the crash of 1837, and to the fall in the price of gold and the value of commodities, *Norman* 2908–2917——Further reference to the crisis in the United States in 1837, and the numerous failures of banks which then took place, as showing that over-issue had gone to a frightful extent, *ib.* 3042–3049. 3202, 3203. 3490–3495 ——Occurrence of pressures in the United States when the paper currency was not in practice convertible, *ib.* 3599–3604——The currency of the States is supplied by several chartered banks and not by one national bank, *ib.* 3605 ——There have been periods in America when over-issues have gone a great way towards denuding the country of bullion, *ib.* 3606–3608——The crisis in 1837 was the result of a most inflated state of credit, *ib.* 3609.

Reference to a statement by Daniel Webster that the over-issue of paper in the United States had banished gold from the country, *Right Hon. Lord Overstone* 3648. 3912—— Statements showing the immense increase of paper issues by banks in the United States for several years up to 1837, and the immense disasters which resulted therefrom; there was, practically, no restriction upon issue, *ib.* 4191–4194. 4240——During this period the notes purported to be payable in specie on demand, *ib.* 4193, 4194——Less disaster in America since 1842, in consequence of measures having been taken to restrain the free action of the banks; great imperfection nevertheless of the present system of banking in the several States, *ib.* 4193.

Usury Laws. Increased power of the Bank, since the repeal of the usury laws, to check a drain of bullion, *Mill* 2202–2205——The usury laws had not much effect upon the rate of interest, except occasionally to raise it, *Norman* 3524, 3525——High rates of interest which prevailed during the period between 1797 and 1821, although, as regards the Bank rate, it was fixed at five per cent., *Right Hon. Lord Overstone* 3767–3777——Improper impediment caused by the usury laws to the free action of the Bank of England in regard to its nominal rate of discount, though they did not prevent the Bank from advancing money in a variety of ways, at more than five per cent., *ib.* 3848–3853——Injurious effect of the usury laws in hampering the money market; money has been decidedly cheaper since the repeal of those laws, *Chapman* 4880–4885.

V.

Vallance & Co. (*Kent*). Petition of these bankers, praying for certain alterations in the Act of 1844, *App. p.* 353, 354.

W.

Wages. Tendency of the present monetary system to drag down the remuneration of labour, *Capps* 5496, 5497.

Wakefield, Crewdson & Co. (*Kendal*). Statement by these bankers, praying to be put on the same footing as Scotch and Irish banks with regard to the issue of notes. *App. p.* 347. 354——Petition from these bankers, praying for an extension of the period for taking the average of their circulation, *ib.* 354.

War with Russia. During the last three or four years the money market has been largely affected by the Government demands, and ultimately the trade of the country must pay for the exports required by the war, *Weguelin* 511, 512——Question as to the effect of the transmission of warlike stores to the Crimea upon the state of the foreign exchanges, *Newmarch* 1928–1938——Satisfactory position of the Bank during the pressure of the late war, *Hubbard* 2388, 2389——Salutary operation of the restrictions imposed by the Bank upon the commercial world during the war; the Act would have continued equally effectual had the war continued; *ib.* 2389–2399——Successful operation of the Act throughout the pressure consequent upon the war, *Right Hon. Lord Overstone* 3708–3717. 4096. 4189.

Webster Daniel (*the late*). Quotation of the views of Mr. Webster in regard to the regulation of paper issues, *Right Hon. Lord Overstone* 3648. 3912.

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence.)—(*Mr. Weguelin.*) Has been Governor of the Bank of England for the last two years; was Deputy-Governor for the two years previously, 1——Has been a Bank director for more than twenty years, 2——Considers that the Bank has worked satisfactorily under the existing law, 3, 4——The directors would have acted in the same manner if the Act had not been passed, 5–7. 73, 74——The Bank reserve is not influenced in the same way as the reserve of ordinary bankers, and chiefly depends upon the state of the exchanges, 8–11.

Constant demand for bullion for exportation during the last four years, 12–15—— Reduction in the years 1851–56 of more than four and a half millions in the stock of bullion in the Bank, 13–15. 18——Particulars as to the amount of gold imported and exported

Report, 1857—*continued.*

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence)—*continued.*

exported in the years 1851–56; 14–17——Paper showing that during the last six years there has been an increase of about 90,000,000 *l.* to the European stock of gold, 16. 17——Estimated decrease during the same period of 10,710,000 *l.* in the European stock of silver, 17——Belief that there has been an addition of nearly thirty per cent. to the internal circulation of gold in this country since 1851; 19, 20.

Causes of the great demand for bullion for exportation, 21–24*——Efflux of gold from this country in consequence of the premium given thereon by the Bank of France, 24, 24*——Favourable working of the Act shown by the fact that the stock of bullion was never less than nine-and-a-half millions in 1856, whereas in 1825 it was reduced to 1,261,000 *l.*, and in 1839 to 2,406,000 *l.*; 25–29——In the banking department the reserve of notes and gold was never below 3,000,000 *l.* in 1856; 26. 35——Increased demand for gold in France in consequence of the change in the circulation of that country, 30.

Particulars as to the changes in the Bank rate of discount since April 1855, with a view to the protection of the reserve, 31–34——Restrictions placed upon the discount of bills, with reference also to the state of the reserve, 31–34——Restrictions and changes also adopted in regard to temporary advances upon stock and other securities, 31–34——The state of the reserve, as affected by the demand for bullion, is the guide by which the rate of interest is regulated, 32, 33. 236–242. 262——Absence of anxiety in the public mind with regard to the state of the reserve, 35.

Witness so fully approves of the present Act that he cannot suggest any alteration therein, 35–37. 77——Considerable fluctuation quarterly in the active circulation and in the reserve of the Bank; cause thereof, 38–40——The lowest state of the reserve is about three weeks after the payment of the dividends, 39, 40. 64. 67——Increased circulation generally in the autumn, after the harvest, 41–44——Reference to the Act of 1845, as requiring the Scotch and Irish banks to deposit a certain amount of coin for any issue of notes beyond the amount authorised by law, 42–45.

Increase in the amount respectively of 5 *l.* notes and 10 *l.* notes in circulation since 1851; 46–50——Witness will obtain for the Committee an account of the increase in silver and copper circulation, 48. 56. 126–128——Grounds for the statement that the gold circulation has increased about thirty per cent. within the last six years, 51. 122——(*Messrs. Weguelin & Neave*). Causes of the increase in the circulation of the 5 *l.* note and the sovereign, 52, 53——(*Mr. Weguelin*). Great increase in the coinage of silver adverted to, 54——The circulation of silver and copper, as well as of notes and gold, has doubtless much increased, 55.

Less effect of an internal demand than of a foreign demand upon the conduct of the Bank, with regard to precautionary measures, 57–60——The wrong inferences occasionally drawn by the public from a diminution of the reserve, when effected by internal demand, do not supply a sufficient reason for an alteration of the law, 61–63——Probability of the public having, in time, greater confidence in the Bank operations, though the reserve may be low, 62, 63.

Consideration of the state of the circulation and reserve at different periods in October and November 1847, and in October and November 1856; the maximum diminution in the reserve in October 1847 proceeded from a regular cause, and if understood would not have unduly alarmed the public, 63–76——The reserve in October and November 1847 would doubtless have increased without the issue of the Treasury letter of 25th October 69–72.

Sundry arguments opposed to any greater separation than at present of the issue department from the banking department, 78–94——Objections to a local separation of the departments, 83–87——Reason why the issue upon securities was limited to 14,000,000 *l.*; 95——Diminution, during recent years, in the circulation of notes above 20 *l.*, more especially in the notes from 200 *l.* upwards; causes thereof, 96–103——An increase of trade is no argument for an increase of the limit of issue upon securities, 101, 102——Grounds for the conclusion that an extension of the limit to 16,000,000 *l.* would not add 2,000,000 to the active circulation, and is not desirable, 104–114.

Advantage in the retail transactions of the country being carried on in coin rather than in paper, 115——Suggested discontinuance of the lower denomination of notes in Scotland, 115——Greater risk of forgery in the case of the smaller notes, 115. 129–131——Data for the estimate that the gold circulation now amounts to about 45,000,000 *l.*; 116–123——(*Mr. Neave.*) Estimate of 50,000,000 *l.* as the amount of gold in circulation, 123–125——(*Mr. Weguelin.*) Question whether it might not be advisable to require security from country banks for their issues, 133.

Enumeration of the duties discharged by the Bank of England as bankers to the Government, 134–136. 143–156——Calculation showing a net profit to the Bank of about 80,000 *l.* a year on the issue of 14,000,000 *l.*; 137–142——Loan of 11,015,000 *l.* due by the Government to the Bank, 138, 139——The Bank pay 120,000 *l.* a year for the privilege of issue, 139——Also 60,000 *l.* a year as commutation of stamp duty, *ib.*——The expenses of issue are about 160,000 *l.* a year, *ib.*——Profit of from 20,000 *l.* to 40,000 *l.* a year

Report, 1857—*continued.*

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence)—*continued.*

a year upon bullion and foreign coin, 140. 142——Amount received for the management of the debt; profit hereon of about 124,000 *l.*; 141, 142.

Duty of the Bank to aid in the collection of the revenue, 144. 155——Practice, quarterly, in making up the audit roll for the payment of the dividends; exception taken to the rule of the Government hereon in supplying the audit roll from day to day, 145–154——List of upwards of forty Government accounts kept by the Bank on behalf of the public, 155——Different classes of accounts kept by the Bank for the Government; distinction between public and private accounts being often difficult, 156——Fluctuation in the amount of profit derived by the Bank from the employment of the public balances, 157, 158.

The position of the Bank towards the Government should, to some extent, be that of a private banker, 159——It would, for several reasons, be very inexpedient to force upon the Bank the system of interest on, and investment of, deposits, as pursued by the joint-stock banks, 159-161. 243-246——The arrangement with the Bank should in fact be a liberal one, 161——(*Mr. Neave.*) Concurrence in the foregoing evidence, 162.

(*Mr. Weguelin.*) Legal distinction at present between the issue and banking departments, 164, 165——Belief that the late Sir Robert Peel, and the Government of 1844, contemplated a gradual extinction of the country banks of issue, 166, 167. 184–188——By the existing law, the issues by country bankers need not terminate, save voluntarily on their part, 168, 169——Objection to a compulsory termination of the issues of country banks, 170–172——Advantage if the country banks were required to deposit securities against their authorised issues, 170. 178, 179. 181–183. 203–213.

Disadvantage of new country banks in not having the power of issue, 173. 180, 181——Objection to country banks being allowed to increase their issues upon securities, 174——Impediments to English country banks issuing upon bullion, if empowered to do so, 174–177——Circumstance of the country bank circulation being always under the authorised amount, in consequence of the mode in which the average is taken, 189–191.

Further evidence as to the probable effect of an addition of 2,000,000 *l.* to the amount issued by the Bank upon securities, 192–199——Propriety of the note-holder having a preference over the depositor in the event of the failure of any bank, 205–210——The Act of 1844 has worked well, as regards the administration of the affairs of the Bank, 214——It has, in witness's opinion, also worked well for the public, 215.

A merchant before purchasing on the credit of his bills should always have regard to the proportion between his available capital and his liabilities, 216–220——Witness is not aware of any house having stopped payment in 1847 which had good bills to offer, 221, 222——Negotiable character of Exchequer bills in 1847, though they were doubtless at a great discount, 223, 224.

As regards the letter of 25th October 1847, it was not asked for by the Bank, was not acted upon by them, and had no practical effect upon the state of the Bank reserve, 225–234——The object of the letter was to remove the undue alarm caused by the low reserve, 228–230. 235——The reserve would equally have increased had not the letter been issued, 231–234.

Respect in which the Bank reserve differs from the reserve of other bankers, and is not influenced by the same circumstances, 237–241——In the event of the reserve being diminished merely by internal alarm, it would not be prudent to raise the rate of interest, 241, 242——Discretion of the Bank direction in regard to the investment of its reserve, 247–249——Practice of the Bank to follow the state of the market in regard to the rate of interest, and not to lead the way in reducing or raising the rate, 250. 269–271——Absence of power in the Bank to regulate, for any time, the market rate of interest, 251, 252. 269–271.

A low rate of interest is not the cause of speculation, but is an index of the large amount of unemployed capital, which leads to speculation, 252. 271——Large reserve of the Bank in proportion as the deposits are large, 254, 255. 259——Unusully large reserve at the commencement of the present drain, otherwise restrictive measures would have been enforced earlier, 254–258. 266, 267——It is considered that the reserve should never go lower than one-fourth of the amount of the deposits, 259——The Bank have always had a certain amount invested in railway securities, 260——An available and sufficient amount is always held in Government securities, 261.

The amount of the reserve depends on the value of money, a large reserve being unavoidable when money is abundant, 263. 265. 268, 269——Inexpediency of a system of compensation to the Bank with a view to the maintenance of an increased reserve to meet any subsequent pressure, 265–268——The rate of interest and the amount of discounts go down together, 269——If when the reserve was unusually large, as in 1845-6, the

Report, 1857—*continued.*

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence)—*continued.*

the Bank had kept the rate of interest at four per cent. it would not have had much or any effect in checking speculation, 269-271.

[Second Examination.]—(*Mr. Weguelin*). Has recently ceased to be governor of the Bank; has been succeeded by Mr. Neave, previously deputy-governor, 272-274.

Further evidence as to its being considered expedient to maintain a reserve of not less than one-fourth of the deposits; reduction of the reserve to three millions in October last adverted to hereon, 276-283——Belief that the reserve of the Bank of England is larger than the reserve of private banks as well of joint stock banks, 284-286——Absence of danger since 1844, as to the convertibility of the Bank note, 287——Alarm only in October 1847, in regard to the state of the Bank reserve, 288, 289.

Further reference to the action of the Bank with a view to the protection of the reserve during the drain of 1855-56; 291-297——With regard to the sale of public securities by the Bank, it does not practically alter the state of the reserve in time of pressure, 296-299——The banking reserve, though consisting only of the notes not in active circulation, is in point of fact a reserve of bullion, and is only affected by a demand for bullion, 300-302——The Act of 1844, though altering the power of the Bank over the bullion, is perfectly simple and easy of application as regards the reserve, 302-305.

Evidence opposed to a proposition for regulating by law the rate of interest by the stock of bullion, and for issuing upon securities at a high rate in proportion as the bullion decreases, 306-322——Difference of opinion among the Bank directors, as to an increased rate of interest being the best restriction for checking an efflux of bullion, 311. 326, 327——Witness looks more to a restraint upon the term of bills than upon the direct rate of interest as a means of guarding the bullion, 311-316.

With regard to the issue of 14,000,000 *l.* upon securities when money is abundant, witness does not object to the provisions of the Act thereon, 323-325——(*Mr. Neave.*) As regards the protection of the bullion, the Bank look upon a high rate of interest and a limitation of the term of bills as a simultaneous and concurrent measure, but mainly look to the former restriction, 327——(*Mr. Weguelin.*) Necessity of the Bank of England keeping a larger reserve than private banks, 328, 329.

Due consideration invariably given by the bank to the interests of the public as well as of the proprietors; the two interests are in fact identical, 330-332——Approval of the rate of interest charged by the Bank in October 1847; 333, 334——Four divisions of the business of the Bank, 335——Explanation as to the Bank receiving only three per cent. on their loan of eleven millions to the Government, 336-340. 349——(*Messrs. Weguelin and Neave.*) Explanation as to the sum of 120,000 *l.* plus 60,000 *l.* for exemption from Stamp Duty, as paid by the Bank for the privilege of issue, 341-348.

(*Mr. Weguelin.*) Calculation of 160,000 *l.* as the expense of issue further adverted to, 350-352.

(*Messrs. Weguelin and Neave.*) Fairness in estimating the gross profit upon issue as three per cent. on 14,000,000 *l.* 353-357——(*Mr. Weguelin.*) Belief that the profit from lost or missing notes does not come to the credit of the Issue Department; it is about 6,000 *l.* a year, 358——The profit of from 20,000 *l.* to 40,000 *l.* a year on bullion and foreign coin is entirely irrespective of the issue of notes, though it comes under the profit of the Issue Department, 359, 360——Way in which the profit on bullion accrues, 361-363——The Government accept the returns made by the Bank of the actual expenses, 365, 366.

With regard to the clause in each of the Loan Acts constituting the Bank a corporation until the loan is paid off, the natural inference therefrom is, that the Bank was intended to act as trustees between the State and the public creditor, so long as the national debt lasts, 367-377——In fixing upon the Bank of England as the agent for the payment of the dividends, an additional security to the creditor may have been intended, though it is not legally given, 376, 377. 383-388——It probably would have been better from the first to have looked upon the Bank merely as agent for the Government, 378-380.

The money contract as to the price to be paid to the Bank by the public, rests upon the same permanent foundation as the incorporation of the Bank, 381——Consistently with the provisions of the Loan Acts the Bank might be stripped of all its privileges, save the management of the debt, 382-384——Doubt whether the State, having paid the public monies to the Bank, would, if the Bank were to become bankrupt, again be liable to the public, 389-391.

Belief that a more equable distribution of the Government payments and charges, that is, monthly instead of quarterly, would not make any material difference to the Bank, or be more convenient to the commerce of the country, 392-405——The periodical diminution of the reserve is well understood by the Bank, though it may, as in October 1847, unduly alarm the public, 401-405.

Further evidence relative to the accounts kept by the Bank for the Treasury, 406-431

Report, 1857—*continued.*

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence)—*continued.*

——Mixed character of some accounts, 407——Directions from the Treasury state whether an account is public or private, 408–410——Remarks relative to the account of the Registrar of the High Court of Admiralty and the Chancery account, which are classed as private, 413, 414. 419–426——List of the private deposits, 415——List of the public deposits, 416.

Belief that no public body in the country could undertake the management of the national debt, with the same security and advantages as are possessed by the Bank of England, 432–437.

Further statement, that in altering the rate of discount the Bank is guided by the state of the reserve as affected by the demand for bullion, 438–440——Power of the Governor to fix the rate of interest from day to day, 441–443——Practice in regard to the retirement of directors by rotation, 446–450——Approval of the present constitution of the Bank Court, save that the number of directors going out every year might be reduced from eight to six or four, 451–460.

Explanation as to the weekly accounts of the Bank up to Saturday not being published till the following Friday, 461, 462. 465——Proposition of the Bank to bring the accounts down to Wednesday, so that there may be an interval of only one day before publication, 463. 464. 466–471——Advantage in the public being furnished with the latest information as to the reserve of bullion, 465. 471–474.

Further statement to the effect that the Bank do not regulate the rate of interest, and have only temporary influence in the matter, 475 *et seq.*——Greater power of the Bank over the money market when the rate of interest is high than when it is low, 476——Wide distinction between the market rate of discount and the rate of interest, 480–483——The London bankers and discounters frequently anticipate the action of the Bank, 485. 492. 495–499——Limited extent to which the bankers regulate their rate by the Bank rate, 488–496.

The Bank reserve is not affected by demands for discount unless the demands are satisfied in the shape of bullion, 499, 500——The Bank often discounts more than a million a day without its reserve being affected, 500——Definition of the term "floating capital," 501–503——In protecting the reserve, the Bank both raise the rate of interest, and restrict the terms of loans, the latter plan being preferred by witness, 504–510.

During the last three or four years the money market has been largely affected by the Government demands, and ultimately the trade of the country must pay for the exports required by the war, 511, 512——Fluctuations in the rate of discount are unavoidable, 513. 519——Intimate connexion between the interests of the public and the Bank, though an increased rate of interest increases the profit of the latter, 513–520.

Way in which the sale of securities by the Bank, in time of pressure, assists the commercial public, though it does not strengthen the Bank reserve, 521–525——Great injury, without corresponding benefit, in selling public securities at very low prices in time of panic, 525, 526——The Bank holds no foreign securities, 527–529.

Average active circulation in each of the last four years, 530, 531——Since 1844 there have been a great many changes in the rate of discount, 532, 533——Advances made by the Bank for six weeks on six months' bills, 534–536——Interest is not allowed on private deposits, 537–540——The joint stock banks in London allow interest on about 35,000,000*l.* in deposits, 538, 539——The interest allowed by the joint stock banks has not much affected the deposits in the Bank of England, but has impeded operations in the Exchequer ibll market, 541–545.

Beyond the regulation of the money market the Bank does not seek to interfere with the course of trade, 546——In discounting bills, their validity alone is considered, without reference to their effect upon exports or imports of the precious metals, 547–550. 554, 555——Approval of an alteration in that clause of the Bank Charter Act which limits the partners in private banks to six, 551–553.

Further evidence as to the refusal of the Bank to discount long bills when there is a severe foreign drain; expediency of this course, though it may press upon one particular section of the trading community, 556–565——Purchase of bullion by the Bank of France by means of existing bills upon England, further adverted to; nugatory character of the transaction, 563–575——Non-objection, in principle, to a similar power in the English country banks as in the Irish and Scotch banks to issue upon bullion in excess of their fixed circulation, 576–585.

[Third Examination.]—(*Mr. Weguelin.*) Further evidence in explanation and approval of the limit of 14,000,000*l.* as the amount issued upon security, 586–615——The lowest amount of active circulation since the Act of 1844, was 16,736,000*l.* on the 30th December 1848; this is exclusive of Bank post bills, and inclusive of notes lost since 1836 or 1837; 586–591——Objections to fixing the limit at 16,736,000*l.*, the minimum circulation since 1844, instead of 14,000,000*l.*; 592–615.

Intention in fixing the limit at 14,000,000*l.*, that 3,000,000*l.* or 4,000,000*l.* of active

Report, 1857—*continued.*

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence)—*continued.*

active circulation, should be represented by bullion, 596, 597. 614——Any monetary disturbance created by a failure of the harvest must be met by the trade of the country rather than by increased issues by the Bank on credit, 604–610——As regards the management of the public debt, the Bank is paid at the usual rate for the increase of the debt through the Russian war, 617–619.

Main duty of the Bank to watch its reserve, and thereby to maintain its credit, 620–626——The liabilities of the Bank consist of the notes in the hands of the public, and of the deposits of the public in the Bank, 627–629——Noteholders and depositors have an equal claim upon the Bank reserve, 630, 631——Bank post-bills form a species of circulation, and are not classed as deposits, 632, 633——Bank notes not being a legal tender by the Bank, it is essential that the reserve should consist of gold, 634–644.

Object of a paper issue, that coin and the capital of the country may be economised, 645–647——Similar effect of a foreign drain upon the reserve of the Bank, if the circulation were purely metallic instead of mixed, 648–667——The circulation applies merely to the conduct of the trade of the country, and is not materially influenced in amount by varying exchanges, 651–669——An adverse exchange tends at first to increase the circulation, and, if of long duration, subsequently to contract it, 668, 669.

The larger denominations of notes are principally held by bankers, 670——The great transactions of trade are mainly carried on by checks on bankers, 671——The larger portion of the notes in circulation are held by the public, irrespective of the banks, 672——At the time of the payment of the dividends and salaries the notes in the hands of the public amount to about two and a half millions more than at the lowest period of the quarter; particulars hereon, 673–678.

The only means of utilising the coin in circulation, or of adding it to the Bank reserve, would be by issuing paper to represent it, 679. 701–705——In times of great emergency, such as entire failure of the harvest, it might be very advantageous to issue small notes as a means of extracting gold from circulation, 679–689——So long as the convertibility of the note is maintained, notes of small denomination are not objectionable in principle, 690, 691——In practice it would be necessary to retain a larger reserve of bullion in case of an issue of 1 *l.* or 2 *l.* notes, 692–694.

Great usefulness of an issue of small notes during the drain of 1825; 695, 696——Recent run upon the deposits in the National Bank of Ireland adverted to; some of the branches were entirely drained of gold before the panic ceased, 697–700——Though the country banks are empowered by law to issue about 8,000,000 *l.*, they are deterred by some of the provisions from issuing more than about 7,000,000 *l.*; 706——By the circulation of a country bank witness means the amount of notes in the hands of the public, 707–711.

Evidence to the effect that the country issuers cannot at their will either increase or decrease the active circulation, 712–746——Absence of any material increase in the circulation, in consequence of the establishment of joint stock banks in 1831 and following years, 719–729——The Bank of England has no means of materially contracting its circulation, 746, 747. 757–770——The forced sale of public securities would be entirely nugatory as regards a contraction of the circulation, 748–756.

Since 1844, as well as previously, the circulation of notes has fluctuated in the same way as the bullion in the Bank, 758–761——Any attempt to contract the circulation during an adverse exchange would result in an internal drain, 762–765——So long as the note is convertible, the paper circulation must fluctuate in the same way that a metallic circulation would fluctuate, 766–770.

Evidence in detail opposed to the establishment by Government of a central bank of issue, 771–810——Sundry advantages possessed by the Bank of England for managing the circulation which could not be possessed by a bank managed by a different body, and conducting the issue merely, 771 *et seq.*——Unimportance of any additional security which might attach to an independent bank of issue, 784–789.

As regards the present separation of the Banking and Issue Departments, the bullion in the latter would nevertheless be liable to pay the debts of the former, in the event of the Bank coming under the Winding-up Act, 785, 786. 811–824——Very considerable expense, without corresponding profit, if Government undertook the issue of notes, 792–810——The profit derived from the issue is generally much exaggerated, 797–801. 806.

Explanation on the items of a Paper (No. 24, in the Appendix), being a copy of the weekly account of the Bank on 9th May last, 825–848——The liabilities and assets of the Bank are divided under the heads of Issue Department and Banking Department, for the purposes of the Act of 1844, as a matter of account, and may not strictly represent the real circumstances of the Bank as a whole, 840–848——As regards the item "Notes," in the account of the Banking Department, it doubtless represents part of the bullion in the Issue Department; doubt as to any misconception hereon on the part of the public, 841–848. 861–866. 880–887.

Consideration of two altered forms of account (produced by Mr. Wilson), showing the total liabilities and assets, without any distinction between the Banking and Issue Departments;

Report, 1857—*continued.*

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence)— *continued.*

partments; doubt whether they are an improvement upon the existing form, 849-876. 885-887.

With the view of ensuring the convertibility of the note the Act of 1844 has compelled the Bank to keep a larger amount of bullion than previously, no reserve having formerly been required against the circulation, 877, 878. 889, 890——The direction of the Bank as to issue was limited by the Act, though the Act has probably made no difference in the actual management on this point, 879——The circulation of the Bank is about one-half that of the whole circulation of the country, 891.

Circumstance of the Act of 1844 not having required any security for the convertibility of the notes of the numerous banks of issue then in existence, further than by limiting the amount of the circulation, 892-896——Through the failure of several banks of issue since 1844, and the abandonment of issue by several banks, about 800,000 *l.* of notes have been partly replaced by the Bank of England, 897, 898. 912——The compensation clause in the Act of 1844, by which the Bank is empowered to compound with issuing banks, has not had the anticipated effect of absorbing the country issues, 899, 900.

It was contemplated by Sir Robert Peel that in ten years from the passing of the Act of 1844 the county circulation would be so diminished that it would be possible to deal with the remainder by legislative enactment, 899. 912, 913——Extent to which the operation of the Act may be said to have given a monopoly to the private banks of issue in existence in 1844, and to have deprived the public of the advantage of new and improved banks, 902-912——Considerable decrease since 1844 in the circulation of the notes of private banks, whilst the circulation of joint stock banks has remained about the same, 902. 911.

[Fourth Examination.]—(*Mr. Weguelin.*) Further reference to the absence of precaution or security under the Act of 1844 in regard to the circulation of private and joint stock banks, or nearly one-half of the whole circulation of the United Kingdom, 914-918. 929. 946-954——Tendency of the Act to diminish the number of private banks, 919——Further consideration of the question as to the Act having arrested the progress of the absorption of private banks by joint stock banks and prevented an increase in the circulation of the latter, 920, 921. 929-935.

(*Messrs. Weguelin and Neave.*)—Substitution by Bank of England notes to the extent of two-thirds of the lapsed issue of private banks further adverted to, 922-924——(*Mr. Weguelin.*) Witness cannot trace any increase in the active circulation of the Bank of England notes consequent upon the permission to issue to the extent of two-thirds of the lapsed circulation; the substitution in fact has been imperfect, 925-928——Further reference to the slight extent to which country issuers have come under the compensation clause; reasons for the comparative inoperativeness of this clause, 936-939. 944.

Belief as to Sir Robert Peel having contemplated that the Act of 1844 should lead to the introduction of one common bank of issue, 941-943——It would not be consistent with the intention of the framers of the Act to continue the existing arrangements with regard to country banks, 945——There is no reason why private and joint stock banks of issue should not give security as well as the Bank of England, 946-953.

Contravention of the principle of the Act of 1844, if country banks were allowed to issue to any amount in proportion as they deposited Government securities, 954——Practically, however, it appears that country banks cannot, any more than the Bank of England, increase their issues or circulation at their own will, 955 *et seq.*——Tendency of speculation or an expansion of trade to increase the circulation, but not to any material extent, 959 *et seq.*——Considerable economy of the circulation in consequence of increased banking facilities, 966. 985.

Further consideration of the proposition that country banks should be required to lodge with the Government public stock as a security for their circulation, 967 *et seq.*——Witness would like to see a portion of the country circulation represented by gold, or Bank of England notes would doubtless fulfil the same object, 967-977——Monopoly secured by the present Act to existing country banks of issue, 986-988.

Evidence in corroboration of the argument that expansion or contraction of trade has little if any effect upon the circulation of the Bank of England, 995, 996. 1011 *et seq.*——Encouragement of speculation by advances of capital, but not by increase of circulation, 995. 1011 *et seq.*——Doubt as to any advantage if the English country banks were put upon the same footing as the Scotch and Irish banks, and enabled to issue upon gold in excess of their limited circulation, 997-1007.

Remarks on the immense decrease of bullion in the Bank between August 1823 and August 1825, owing to a foreign drain, 1015-1034——In 1825 the Bank had not power to raise the rate of discount beyond 5 per cent. as a means of checking the efflux of bullion, 1025, 1026——(*Mr. Neave.*) In 1825 the gold went unobserved out of the country, there having been no proper record of the reserve at the time, 1034, 1035.

(*Mr. Weguelin.*) Probability of the circulation of country banks having decreased between

Report, 1857—*continued.*

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence)—*continued.*

between 1819 and 1824; 1039–1044——Slight alteration in the aggregate circulation during the speculation in 1836 and 1837; 1045–1058——(*Mr. Neave.*) Remarks on the circumstance of there having been a decrease of about 1,000,000*l.* in the circulation of the Bank of England in 1836, and a corresponding increase in the circulation of other banks, 1058–1076.

(*Mr. Weguelin.*) Considerable diminution in the bullion between September 1846 and the autumn of 1847, and corresponding increase in the securities held by the Bank, whilst during the same time there was no material change in the amount of circulation, 1077–1106——The advance of capital by the Bank, and the amount of bullion and of securities held by the Bank, may be said to be uncontrolled by the Act of 1844; 1105——The notes in reserve, representing the bullion upon which they are issued, are liable to diminution and increase, and are not included in the term circulation, 1105, 1106. 1111–1114——(*Mr. Neave.*) The notes in reserve are as much issue as though they were in the hands of the public, 1106–1110.

(*Mr. Weguelin.*) Great fluctuation in the reserve of notes in the Banking Department in 1847 and 1848, and corresponding fluctuation in the bullion without any effect upon the active circulation, 1111–1121——Question as to the advantage of a different form of account, in order that the public might see that a decline in the reserve represents a variation in the bullion, and not in the active circulation, 1118. 1129, 1130——The advantage of the present separation of the accounts is, that it keeps before the eyes of the public the restraint upon the Bank not to issue more than 14,000,000 *l.* upon securities, 1118. 1167——As a rule, variations in the bullion depend upon variations in the advances upon securities, 1125–1128.

Great effect of the reserve of the Bank upon the trade of the country; it represents the accumulation of unemployed capital, 1130——Effect of advances of capital, but not of the amount of circulation on trade and prices, 1131–1135——Further opinion that the note-holder should have a greater claim than the depositor upon the effects of the Bank, 1136, 1137——Argument, that under the Act of 1844, the legal claim applies equally to all the assets of the Bank, whether on the part of the note-holder or of the depositor, 1138, 1139. 1147–1155. 1158.

(*Mr. Neave.*) Dissent from the foregoing evidence; opinion, that by the separation of the two departments, the depositor can have no claim upon anything lodged in the Issue Department, 1139–1147. 1156–1158——The Bank of England are merely administrators of the Issue Department, 1144, 1145——The Bank note is not a legal tender on the part of the Banking Department, 1146, 1147. 1158——(*Mr. Weguelin.*) Argument, that the Act intended that notes should be a legal tender in the Banking Department, 1147–1155. 1158——Practice of the Banking Department to pay cheques in notes, which are exchangeable in the Issue Department, 1149–1153. 1253–1256.

It is at least equally important to retain a reserve against the deposits as against the circulation, 1159–1163——In the management of the Bank, the main thing to look to is the proportion of unemployed bullion, 1164, 1165——The whole object of the Act of 1844 would probably be gained if the Bank were required to keep a certain amount of bullion in proportion to its circulation and deposits, 1166, 1167.

Consideration of a form of account (produced by Mr. Wilson), in use since 1832, in the case of Colonial banks of issue; doubt as to any advantage if a similar form were adopted by the Bank of England in lieu of the present double form, 1168–1180——(*Mr. Neave.*) Exception taken to the form of account proposed by Mr. Wilson, 1175, 1176.——(*Mr. Weguelin.*) As regards the Government debt of 11,000,000 *l.*, no advantage would accrue if the Bank were empowered to turn it into convertible securities, 1181–1183. 1242.

Power of the Governor of the Bank to alter the rate of interest at any time, without reference to the Court, 1184–1190——The rate is usually fixed every Thursday by a majority of the court, and the Governor rarely alters it subsequently, 1184, 1185. 1188——Except on temporary occasions, witness further states, that the Bank has no power of regulating the market rate of discount, 1191–1199——The only safe rule for the Bank to adopt is, to be guided by the principle of supply and demand, and to follow the market rate, 1200–1212.

As a means of correcting adverse exchanges, witness further advocates a restriction of the terms of loans, rather than an advance in the rate of interest, 1201, 1202. 1205–1216. 1234–1236. 1261–1266——The successful management of the Bank during the last two or three years of pressure was not in any way a consequence of the Act of 1844; 1217–1221——The same management of the pressure of 1847, as of the recent pressure, would hardly have been followed by similar good results; the circumstances of the two periods were widely different, 1218, 1219.

The comparatively large reserves of bullion held by the Bank since 1844 are attributable to discretion in the management, and not to the restrictions of the Act; without the Act there would be the same obligation felt to retain a sufficient reserve of

Report, 1857 —*continued.*

Weguelin, Thomas Matthias, and Sheffield Neave. (Analysis of their Evidence)—*continued.*

bullion, 1222–1232——(Mr. *Neave.*) Opinion that the reserve of gold being greater since 1844 is a consequence of the Act, 1224——As regards the pressure in 1847 and the late pressure, the Bank took prompter measures on the latter occasion, *ib.*

(Mr. *Weguelin.*) Large bullion reserves of the Bank of France during the late war, although there is no statutory obligation as to the proportion of its reserves, 1226–1231——Belief that the Bank of France are limited to a maximum rate of six per cent. discount, 1233——Restriction placed by the Bank of France upon the terms of loans on bills, 1234–1236.

Approval of a certain proportion of the Bank directors going out by rotation, 1237–1239——Sense in which the loan of 11,000,000 *l.* to Government at three per cent. is a sort of compensation for the privileges of the Bank, 1240, 1241——Advantage in making up a weekly account for the Gazette of Friday, rather than of Tuesday, 1243, 1244——Practice of the Bank in regard to light silver: they do not lose by it, 1245–1248——Light sovereigns are taken at the bullion price of 77*s.* 9*d.* the ounce, 1249.

There would be no difficulty in publishing the weekly account in two forms, 1251, 1252——Further statement that the rate of interest is governed by the state of the reserve as affected by the demand for bullion, 1257, 1258——There is a resolution of the Court that the rate shall always be kept approximate to the current rate out of the Bank, 1259——The Court has recently passed a resolution in favour of a reduction of the proportion of directors retiring annually, 1260——With regard to the increased issue by the Bank of 475,000 *l.* in lieu of lapsed country issues, Government receives two per cent. from the Bank upon such increase, 1267.

[Fifth Examination.]—(*Mr. Weguelin.*) Further expression of the opinion that the Act of 1844 did not affect a legal appropriation of the assets transferred to the Issue Department, to the ultimate payment of the notes, 1268–1279. 1282, 1283——Words in the Act which infer that the directors are restrained from taking bullion out of the Issue Department without bringing in or cancelling notes for it, 1296–1272. 1278, 1279——Repetition of opinion that the noteholder should be placed upon a better footing than the depositor, 1280——Absence of prejudice to the depositor by the restrictions of the Act in regard to providing for the notes, 1281.

Propriety of dismissing from one's calculation so remote a contingency as an insolvency of the Bank, 1284–1286 ——The convertibility of the note being provided for by the Act, and the circulation taking care of itself, witness fully approves of the attention of the Bank direction being confined to the Banking Department, and of the present separation from the Issue Department, 1287 *et seq.*——Further approval of the present form of account as admitting of clear apprehension on the part of the public, 1297–1300.

Except under peculiar circumstances, and to a limited extent, witness further states that the Bank cannot extend its issues, 1301–1308. 1312——Circumstance of there having been an increase of nearly 3,000,000 *l.* in the country bank circulation between 1833 and 1836; 1308–1311——Objection to speculation being supported upon an increased credit circulation rather than an accumulation of capital, 1311. 1314, 1315.——Probable effect upon trade if the Bank were to force an additional issue of 5,000,000 *l.* by lowering the rate of discount, 1316–1329——Reference to the diminution of the note circulation since 1853, whilst a larger quantity of gold and silver has been employed, 1325–1329.

On the whole, witness fully approves of the Act of 1844, and is not prepared to recommend any material alteration of it, 1330——Winess decidedly objects to an issue of notes by the Bank of England, or any other bank, unless there be an ample reserve of gold in the one case, and of Bank of England notes or gold in the other case, wherewith to pay the notes of issue, 1331——As regards the legal question relative to the respective claims of depositors and noteholders, Mr. Freshfield, the late solicitor to the Bank, has given an opinion thereon which witness considers to be in conformity with his own, 1333, 1334.

Weguelin, Mr. Letter from Mr. Weguelin to the Chancellor of the Exchequer, dated 10th November 1856, with reference to the operation of the Acts of 1844 and 1845, and in general approval of the former Act, *App. p.* 1–4.

Wells, Hogge and Lindsell (*Biggleswade*). Memorial of those bankers, suggesting that the time permitted for taking the averages of the circulation, be extended from one month to six months, and the year be divided into two periods of six months each, and requesting to be put upon the same footing as the Scotch and Irish banks in regard to issue, *App. p.* 351.

West Riding Union Bank. Memorial of this bank, praying to be placed on the same footing as Scotch and Irish banks in regard to the issue of notes, *App. p.* 348.

Western Bank of Scotland. This bank represents the very serious disadvantages which, from not being incorporated, it is by the Act of 1844 extended to Scotland in 1846, made to be under in comparison with other Scotch banks, which had obtained charters

of

Report, 1857—*continued.*

Western Bank of Scotland—continued.

of incorporation previously to 1844; and from not being allowed to obtain incorporation, except by subjecting itself to disabilities from which other banks are exempt, *App. p.* 332, 333.

Particulars as to the amount of capital, &c., and of the authorised and actual circulation in April 1857, *App. p.* 333.

Statement on the part of the Bank in favour of rendering the authorised circulation of Scotch banks more adequate to the increased and legitimate wants of the country, *App. p.* 339, 340.

Westmoreland Banks. Petition by the bankers of Westmoreland, &c., praying to be put on the same footing as Scotch and Irish banks in regard to the issue of notes, *App. p.* 347. 354—— Petition from these banks, praying for an extension of the time for striking the average of their circulation, *ib.*

Whitehaven Banks. Memorial from the Bank of Whitehaven and the Whitehaven Joint Stock Banking Company, &c., praying to be put on the same footing as Scotch and Irish banks with regard to the issue of notes, *App. p.* 347.

Wilson, Francis. Statement by Mr. Wilson, dated 12th November 1856, in approval to a certain extent of the Act of 1844, but recommending that there be a power of temporary relaxation and extension of the limit upon issues, *App. p.* 19.

Wright, James. Letter from Mr. Wright, manager of the Boyal Bank of Scotland, to Sir G. C. Lewis, dated 3d December 1856, approving of the principle of the Act 8 & 9 Vict. c. 38, but suggesting an enlargement of the amount of circulation assigned to the Scotch banks, and an extension to eight weeks of the period for striking the averages, *App. p.* 329, 330.
